News of the Week Cut Down for Busy Readers

Washington

At a conference at Washington with President Harding the railway unions decided against a conference with railroad executives in an effort to reach a settlement of the railway shop strike.

• • •

Richmond baseball and rail fans were reported to the central coal distribution committee at Washington. Leslie Iggs on Friday totaled 15,252 cars, an increase of 725 over the previous Friday.

• • •

The continued use by Germany of the term "reparations" in diplomatic documents came in for considerable discussion in official circles at Washington.

• • •

Hope of immediately ending the railway strike was blasted at Washington when the railroads and the Labor Board President Harding's third proposal for settlement.

• • •

A decrease of $2,145,928,496 in the value of American exports for the year ending June, 1922, was announced by the Department of Commerce at Washington. The value of imports for the same period decreased $1,046,439,238.

• • •

Prospective production of corn this year is reported 130,000,000 bushels as a result of growing conditions. Winter production was forecast at 454,000,000 bushels more than a month ago, Washington reports.

• • •

Hobos, loafers and shoes were put on the free list by senate vote at Washington.

• • •

President Harding at Washington called the railroads and the unions to end the shop strike and leave the question of security to the railroad labor board.

• • •

After President Harding at Washington had told the senators he wanted flexible tariff provisions the senate approved them, but with restrictions forced by Senator Lenroot.

• • •

Personal

John G. Woolley of Madison, Wis., prohibition candidate for president of the United States in 1920, died at Grafton, Wis., after an illness of some days, due to a cerebral clot.

• • •

Viscount Northcliffe, noted British publisher, died at London.

• • •

Levy Mayer, head of the law firm of Mayer, Meyer, Austrian & Platt and nationally famous as attorney for some of the country's largest industrial interests, died at Chicago.

• • •

Prof. Charles L. Babcock, founder of "Bird day," described in schools of many states, died at his home at Ames (Ia) City. He was author of many books on birds and educational methods.

Domestic

All employees of the Lake Carriers' association below the grade of licensed officers have been granted wage increases of $15 per month, effective September 1, it was announced at Cleveland, O.

• • •

The British steamer Marina, 200 tons, bound from St. Pierre-Miquelon for Halifax, with a cargo of 2,000 cases of whisky, was captured off Block Island, near New York, by the Unites States cutter Pontoosuc.

• • •

Pullman Co. has instituted gate center of Nebraska, and for the last week settlers have been arriving in the absence of Governor McMaster, who is working on a 3,000-mile strike round at Lincoln, Neb.

• • •

"Big Tim" Murphy, on trial at Chicago for the murder of Jake Lingle, pleaded in the number of Police Lieutenant Terrence Kerner, one of the men in charge when the states attorney indicted the officer.

• • •

Chiefs of police of Fremont, Ohio, issued a brotherhood-like certified check equipment to patrol automobiles. Many trucks are fled in Sandusky county.

• • •

John Lewis, sixty-eight years old and Jack Lewis, two years old, both deed Mrs. C. L. Smith, sister of Mrs. Lewis, the latter a daughter of the dead man, slightly injured when their auto crashed into a tree at Lisbon, Ia.

• • •

Two notorious employees of the New York Central at Cleveland were shot and killed.

• • •

Mrs. Elizabeth Schuler, seventy-two years old, died from exposure for six years died at Paris, Ill., of septicemia caused by a fall from a chair. Her son, aged eight and eight children survive.

• • •

A group of New York bankers have formed a syndicate to buy the entire crop of all cotton shipped into that state for the next three months under the best and allowing prices.

• • •

A baby's death, said to have been caused by a cold contracted in a bath, was reported from the Atlantic City (N. J.) hospital.

• • •

The board of directors of the Tennessee Coal, Iron & Railroad Co. at New York, Nov. 1, declared a reduction in the quarterly dividend from $1.75 to $1.

• • •

A large number of the Pullman Co. Dispatchers employed in the Sunset Limited, Chicago, Ill., and Los Angeles, Calif., have taken the refusal of their employers to accept the decision of the Labor Board.

• • •

With a capacity of 1,000 M. S. 80. P. railway writing at 3,000 miles, other "Big Boy" locomotives are threatening to take on the Southern Pacific and Northern Pacific lines, which are reported to be seriously affecting the Pacific Northwest. The West points have spread all over the country.

• • •

The warehouse of Harold F. McCormick of Chicago and Genoa, Wisconsin, in Paris on illegal in Atlanta, Ga., according to attorneys, who pointed out that the Illinois statutes forbid marriage within a year of divorce.

• • •

Bituminous operators and miners at Cleveland drafted a wage contract which will cost in part the strike that began April 1, when operators may join in agreement when they wish.

• • •

The strike of the Big Four brother hood men of the Union Pacific was called off and four conductors and trainmen left San Bernardino, Calif., immediately.

• • •

Funeral services of Mrs. Emma Nelson, wife of United States Senator Knute Nelson, were conducted at the Norwegian Lutheran church at Alexandria, Minn., Rev. A. T. Tjernhuis officiating.

• • •

Lieutenant Moriarity and a Mr. Sumstegard were issued on double when the airplane which they were flying caught fire in a flight over Wilbur Wright field, near Dayton, O.

• • •

William Gilbarum, wealthy lumberman, was shot and killed by two burglars in his home at Lakehurst, N. J.

• • •

Sheriff S. A. (Bud) Fellier of McCurtain county was shot dead at a lumber camp near Tushel, Okla., when raiding an alleged bootlegger den.

• • •

Five persons were drowned in Brandon lake, near Lamar, Colo., when a flat scow from which they were fishing overturned. None of the party survived.

• • •

Trainmen of the Chicago, Aurora & Elgin line voted at Chicago, Ill., to 24 to go on strike.

• • •

A five air record was made when a party of 64 Annapolis college girls touring Europe, planed Thursday from London. Four airplanes were used.

• • •

Sun train No. 1 was wrecked just south of Forest, killing 12 persons and injuring others, according to reports received at Memphis, Sunk.

• • •

The Georgia peach crop this season was worth more than $10,000,000 was the third largest crop grown, according to announcement by the Georgia fruit exchange at Atlanta.

• • •

The federal district attorney in Southern California was ordered by Attorney General Daugherty at Washington to investigate whether the abandonment of trains on the Santa Fe railroad was the result of a conspiracy.

• • •

Thirty-seven prisoners in penal institutions in California were refused clemency by the state board of pardons and two received pardons, following a report of the board to the governor at Indianapolis.

• • •

Louisville & Nashville engineers on the Henderson-St. Louis division voted at Evansville, Ind., to remain off duty until equipment is put into good condition and street guards removed from railroad property.

• • •

A new navy hospital built at a cost of $1,000,000, will be commissioned at San Diego, Calif., on August 24. By September 1, officers say, the personnel of the hospital will number 600.

• • •

Edward W. Schlitz, former racing driver, and Leroy Keller, his assistant, an overseas aviator, plunged 2,000 feet in their plane to death in one of the main streets of Naperville, Ill.

• • •

One million dollars' damages is sought by Evan Burrows Fontaine, dancer, in a suit for breach of promise filed at Nanuet, Rockland N. Y., against Catherine Vanderbilt (Mrs.) Willy, sr., son of Harry Payne Whitney.

• • •

Foreign

In retaliation for British authority with other nations, the Italian Fascisti conference against the Bolshevisti, the latter have seized three British steamers and arrested three Britishers at Odessa.

• • •

Arthur Griffith, president of the Dail Eireann, died in a nursing home in Dublin.

• • •

The government of Alsace Lorraine at Strasbourg has announced that all German subordinates in Alsace-Lorraine have been served with notice of their dismissal, and must cross the frontier at once.

• • •

After a month of most terrifying experiences in Siberia, Lieutenant Colonel Ivanoff, of the cleanest and most honorable officers in Czarist Russia, is again in the hands of the Free State forces, according to English dispatches.

• • •

Death in the Dominion of August 2 at Bracken, a seaport 250 miles north of Hongkong, was announced on October 30, the American consul at Swatow has reported to the American legation at Peking.

• • •

M. Demerjee, pilot of the Belgian Sabena Airplane, in the James Gordon Bennett cup race, has been declared winner, says a dispatch from Paris.

• • •

The foreign office at London announces that the governments of Belgium, Portugal and South Africa have agreed to ratify the treaties entered into at the recent Washington conference.

• • •

A dispatch from Washington reported the sinking of a Russian destroyer during maneuvers. No mention was made of casualties.

• • •

Rebels captured Dundalk and attacked the capital as the Irish Civil war broke out anew in Ireland.

• • •

Retirement of the Greek troops from Constantinople and the evacuation of the last of the positions they occupied in their recent threatened advance to Ismid (Nicomedia) has been ordered by the Turkish gendarmerie.

• • •

The entire copy of the Washington Post was seized by King George at London.

• • •

The Fortuna mansion by George was captured by the Bolsheviki at Batum. The passengers were held for three days, afterward being transferred to the Turkish consulate.

• • •

All the public buildings in Cork and Queenstown were destroyed by the republican irregulars before evacuating those cities, say advices from Dublin.

• • •

Harold F. McCormick, multimillionaire manufacturer of Chicago, and Madame Emma Wahlen, beautiful Ballet, grand opera singer, were married at Paris.

• • •

The general strike in Lisbon was terminated following a declaration from the government that the price of bread would be reduced.

Our Aviation Problem

SENATOR WALSH (MASS) WOULD HAVE DEPARTMENT OF NATIONAL DEFENSE, COMBINING ARMY, NAVY AND AIR

By JOHN DICKINSON SHERMAN

WE'VE often heard of Eddie Rickenbacker, our American ace. Well, he started recently on an aerial tour of the United States. He was to visit all the states and to report to the federal government on the condition and availability of landing fields and on other aviation matters. Probably he had a good machine; it is to be presumed that he had the best available, and what did Eddie Rickenbacker report? Nothing, nothing at all. His machine was forced down four days in succession. Thereupon he abandoned the trip.

In Chicago, not long ago, a local flyer took up a bride-to-be and bride for a short flight. They were honeymooning and wanted the best there was going the way of seeing the sights. The machine crashed. Both passengers were killed.

Recently, in Washington, a commercial plane took his passenger for a short flight. The machine was drowned out and an engine failed. The pilot and the plane fallen between the two cities were killed and injured.

These are but three incidents—any issue of a newspaper will furnish more—which clearly indicate, according to the experts, that aviation in the United States is at home ends and that the situation is so bad that something really must be done about it.

By way of emphasis to our own do-nothing policy, the experts declare, Europe is dotted with landing fields and lined with air routes. European nations are stimulating commercial aviation with subsidies.

On the other hand, according to the experts, the results of systematic development are shown by the fact that the air mail service of the Post Office Department has just completed a year without a single fatal accident, with 1,750,000 miles covered.

In Congress the Wadsworth-Hicks bill is pending. Legislation for a United States bureau of commercial aviation.

Also, there are the National Aeronautic association and the Society of Automotive Engineers are considering the formulation of an aeronautic safety code, with the assistance of experts of the bureau of standards. Pending the passage of the bureau of standards bill the draft of its safety code is tentative, but its principal provisions will include:

Inspection of aviators and aircraft in connection with the granting of licenses to pilots and air transportation companies; prohibiting of dangerous practices in flight; rules governing personnel and equipment of airdromes, including medical and signal equipment; aircraft radio regulation rules for landing fields; lighthouses for night flying and landing.

In the senate the other day Senator Thomas J. Walsh of Montana read into the Congressional Record an article "Our Aviation Problem," written by the New York Times for September 1. Walsh, of Massachusetts, saying that it was interesting discussion of the problem of a vitalizing contribution of the bill now before the senate.

Senator Walsh of Massachusetts in this article says that what we now need is the consolidation of the Army and Navy departments into the Department of National Defense, with a secretary at its head, and three undersecretaries for the army, navy and air.

Here are some of the points made by Senator Walsh of Massachusetts in the article:

"It is regretable that in or out of congress there is no little interest in what our government is doing, or rather failing to do, to stimulate interest in aeronautics and to foster and encourage a new and promising industry. Yet, in spite of the fact that they are even more sound today than in 1919, when the report was made. The report was in part as follows:

"As a result of our studies, your mission desires to emphasize the importance of the question and immediate action is necessary to safeguard the air supremacy of the United States. Unless we are prepared to take advantage of the great aviation experiments made during the period of the war, and to give the industry a fair chance, the United States will be left behind.

"That we of today are not entirely no more qualified to judge as to the scale and development of the aeronautical industry than were those who made the report of 1919. The progress made since then, and the lessons learned from the experiments made during the period of the war, and to give the industry a fair chance, the United States will be left behind.

"The principal recommendations of the tribe commission, some of which have been adopted, and which were discussed rather than developed were the establishment of a department of air, with a cabinet officer at its head, creation of a separate unit in representation with the Departments of War, Navy and of Commerce and the establishment of governmental institutions of education and training, including an air academy, all more alike under proper restriction to military, civilian and naval personnel, but the creation of a system of circulating army, navy and civil personnel through the national air service.

"In not the time at hand to demand that an effective, intelligent and definite policy be formulated and carried out?

"Those who have studied this matter thoroughly and fairly are of the opinion that this will be impossible so long as we present policy of distributing our air activities among several governmental departments, and so long as it is necessary that we have a duplication of our national defense agencies of our air force, as our power is not entirely adopted by other nations.

"The principal reason for the existence of the numerous air activities is being discouraged and the national government overcomplicated may be stated thus: Which has recently been brought to light in the navy.

"Given stated in the Hudson and Lenoir resolutions of the aviation commission, heretofore referred to, any Army Air Service can proceed with great aerial activity on both sides. Lying as we are between two oceans, our first steps in war will be over the sea. Early in the war the disadvantages of having our Army Air Service as part of the Signal corps were recognized, and it was made a distinct and separate service of the army. As a result our Army Air Service is more efficient than it ever could have been otherwise as part of the army. If we are to upload our defense over the sea we must have an air service. Our navy aviation service must be remoded out into a distinct and separate service, and combined with our Army Air Service and our bureau of civil aeronautics. Its great, efficient and well balanced national air service.

"What we must do now is the consolidation of our War and Navy departments into a single Department of National Defense, with a Secretary for National Defense as its head and six undersecretary for army, an undersecretary for navy and an undersecretary for air. The undersecretary for air should have, in addition to the undersecretary for air at its head, three administrative officers, an assistant secretary for army air, an assistant secretary for naval air and an assistant secretary for civil air.

"Such an organization would not only foster greater economy and efficiency between our present army and navy, but would create a great, efficient and well-balanced national air service.

"Such a service would carry with it a morale which would be lacking in the Army Air Service alone. It would facilitate the establishment of schools of strategy and tactics of the air and would stimulate the development of aeronautical engineering. It would give the greatest opportunity to develop their activities to the promotion of the development of aeronautics, would retain all experienced officers in the service. It would bring our present more or less disorganized and dissatisfied navy and army aviation into a well-organized, efficient and valuable unit of our armed forces.

"The Sandwriting on the wall must be seen and action must be taken. Our force in the air must be governed and guided not by the selfish desires of the advocates of the navy or of the army requirements of the defense and preservation of our national integrity."

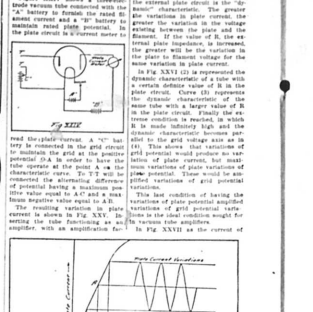
RADIO

ALL ABOUT VACUUM TUBE AS AMPLIFIER

Connected Up to Furnish Rated Filament Current and Maintain Plate Potential.

Figure XXXI shows a three-electrode vacuum tube connected with the "A" battery to furnish the rated filament current and a "B" battery to maintain rated plate potential. In the plate circuit is a current meter to read the plate current. A "C" battery is connected in the grid circuit to maintain the grid potential at 0. In order to have the tube operate at the point 1 on the characteristic curve, To T'T will be connected the differential "B" battery of potential having a maximum positive value equal to the point 2 and a minus negative value equal to A-B.

The resulting variation in plate current is shown in Fig. XXV. In operating the tube as an amplifier, with an amplification factor of 8, between the supply of alternating current potential at T'T, we can put K times what it actually is in the plate circuit, which is K times the current flowing. If the value of K is 8 and the current is 1 amp. The amplify a signal from a radio receiver then, it is only necessary to have a circuit whose output is to be 8 times the input. In Fig. XXVI the amplified output taken off at X and Y is 8 times the input potential at the grid. Let the output from X and Y is run through a transformer similar to that shown in Fig XXVII.



SPARKS

The "Telephone," a society of radio fans at Seattle, decided on a campaign to prevent the broadcast programs in its criticism, and to encourage the listening complaints, opened a free school to the new fans, and to instruction in the code.

People interested in isolated sections are getting great satisfaction from their radio, as it is a case for loneliness. They not only feel that they are not cut off, but in "speaking distance" but that entertainment is at their beck and commission on increased sales of his papers from his big boy explorer.

Members of Co-Operative Association Bringing Their Produce to Shipping Point—The Association Is Defined Because It Is Organized on Sound Business Lines.

The market values of the different grades of wheat and the different qualities within the different grades. This information will be made available to farmers and local buyers and all others interested in more detailed information. Dissemination of the value of wheat.

"Farmers must know the quality of what they possess, and it has been organized by providing trained experts who will train county agents to grade and classify wheat, and to provide in the office of the county agent where farmers can go to be trained, and where they can have their wheat graded and have their own wheat, and training schools for county grain buyers at the country may introduce more accurate methods in grading grain, and to be in demand.

In discussing co-operative marketing, Doctor Taylor said that "successful co-operation must be based upon efficient service to the 'other fellow' at a fair price, and must have the chief objective be the welfare of the co-operative.

"Agriculture includes too large a proportion of the population to be prosper without the prosperity of the nation as a whole. I am thoroughly convinced that just to the extent that the motive of fixing prices as an objective in the organization of co-operative marketing is kept in the foreground and the hope of a monopoly price for the product is in the dominant motive on the part of farmers in co-operative marketing organizations, the movement is doomed to fail. Agricultural co-operation promoted and on

Newsboy at Ten, Now Is Rich Man

Interesting Story of a Young American Who Found Success in the Ladder of Fortune.

WINS BY BUSINESS BRAINS

Stevenson Dispute Glowing Convictions Entertained by Many That Opportunities for Success Are What They Used to Be.

New York.—Here is the story of a young American who rose by the ladder of fortune which should prove encouraging, inspiring and especially to American boys and youths. And it proves that success is not hidden in a humble jobs name the glowing conviction that opportunities for success and wealth are not what they once were in their native land, who give credence to the commonplace expression of opinion that Rockefeller, Carnegie and their like long ago "grabbed all."

The story is that of Harry Stevenson, an Irish proposition—for he is still a youngster. He began his business career when he was ten years old. His establishment was at the corner of Fifth and Bryant streets, in Clintonville, and consisted of a pair of empty boxes that constituted a stand of newspapers a clear value, double lungs and dynamic energy.

He is now thirty. He is president of the Stevenson Publishing Co., with a capital of $125,000, the controlling interest of two additional thriving companies that with other associations are soon to be merged into a super organization, of which, when the new "service" will be the directing mind.

When he was ten years old his lungs were frequently found on a pile of old newspapers in the comfortable warmth of a Cleveland newspapers' printing office. He got to be a welcome visitor at Douglaston, L. I.

Sala Five Feet of Knowledge.

He sought and found B. B. Stanley, manager for that section of the company which was pushing the Eliot shelf." He got the job.

Harry Stevenson quit selling Dr. Eliot's "five-foot shelf" at twenty. He had "covered" the high schools of six counties. Meanwhile the distinguished Harvard "prexy" had laid the foundation for a "newspaper" fortune, for

Miss Emma E. Steiner of New York, a cousin of Barbara Frietchie. Civil war heroine, who failed in her election of being the only woman director of the Stock Exchange, which has already directed more than 5,000 of the country's leading men, and is the present musical director of the Music Temple of the world.

Do You Know

Every time you buy and use cheap and big can baking powder that does not give satisfaction you have increased the cost of your bakings many times?

REMEMBER

CALUMET

The Economy BAKING POWDER

Is the best that can be made

You may get more quantity for your money—but quality means pure, sweet and always successful bakings.

Millions of housewives buy and use Calumet because they know that it is the best leavener at the lowest price.

BEST BY TEST

THREE FUNDAMENTAL FACTORS IN IMPROVEMENT OF FARM BUSINESS

(Prepared by the Iowa State Department of Agriculture, Des Moines.)

"Help the farmer to help himself" was the keynote of an address by H. C. Taylor, chief of the war time organized bureau of agricultural economics, at a recent meeting of Iowa national extension workers at Amherst, Mass. Three fundamental factors in improving the farm business were outlined. Adjustment of production to marketing conditions, co-operation, and utilizing the services of government agencies.

"I believe that when farmers have a well-balanced view of the relative importance of these three factors, they will look more to individual effort in solving the marketing problem," Doctor Taylor said.

"In addition, it is necessary to market ing conditions, knowledge of the standing of production and marketing and higher interpretation in the light of past experience and principles, should be the job of public agencies to collect these data, but it remains for the farmer himself to act upon them."

Discussing Hog Situation.

The present situation regarding prospective supplies of hogs was given Doctor Taylor as a case in point. Last November and December prices of hogs were low. No adequate explanation were available with regard to the supply of hogs coming to market and the packers overestimated the supply. Prices went down. Later on, when prices were lower than was justified by conditions of supply and demand and at the end of the winter run the packers found the stocks of pork.

The Department of Agriculture made a survey of pig production, so as to have a fair estimate of the supply of hogs available for the fall trade. The figures show an increase of 14½ per cent in the number of sows farrowed for that 1921, and an increase of 40 per cent in the number of sows being kept for fall litters. This information was widely disseminated among producers of hogs through the press, and farm bureau workers thereby enabling producers of hogs to adjust their supply at once some of the sows they had kept for the fall litters.

"In the light of these figures it is probable that American farmers would be better off and the American consumer would be better off if the bread sows kept for fall litters were marketed as pork," Doctor Taylor said. "Ah we can do, however, is to point out the facts and leave the farmer to draw his own conclusions.

Another illustration cited is the agitation in the supply of eggs, and the change in the federal grain grades, Doctor Taylor said.

"A careful study of the whole situation suggests to me that problem would still remain in the present form if the grades were changed and that the remedy would be in better methods of marketing and more intelligent action on the part of the farmer himself.

"Know Your Wheat" Campaign.

"As a means of this educational program will be organized in the spring wheat states with a view to giving more adequate information regarding

Survey Shows Increase of 14½ Per Cent in the 1922 Pig Crop Production.

the state with the governments which are themselves co-operative institutions in the hands of farmers to do this work. The fruit and vegetable inspection service was given as an illustration of this point.

"A carload of spinach is shipped from Austin, Tex. Upon arrival in Chicago it is found to be of poor quality. Upon the market that is needed to allow the dealer who had contracted for the spinach might receive the "knock" and lose on the transaction and refuse to accept it. The farmer who shipped the spinach, in order to New York to look into the matter and without some system of government inspection, he is at a disadvantage. Under the present government inspection upon the car, and if the spinach is in good condition it is in position to enforce the original contract. This is a simple illustration of the value of the system of government inspection upon the car, and the value of the standardized and dependable and thoughtfully and winning hand.

His parents were both living but Harry was only a thirty took job after school assisting an older boy who was employed in the Clintonville Co. Harry took a job at the "newsboy" stand, and soon made the most desirable street corners for the sale of newspapers from boys in their late "teens. But Harry discovered that a very little lung go into his "cross could, for the payment of a few cents and a monthly rental of $5, hire from these bigger boys a desirable corner. He got it, and was commission on increased sales of his papers from his big boy employer.

Forgot To Buy Bible, Now Reads It in Jail

Harry Stethoff, twenty-six years old, a member of the Washington State National Guard, has his job on the "Bible" science when he entered a curfew violation stop in Tacoma, Wash., and tendered a check for a dollar, a ready, and some change. Because of the unusual request, the desire thought the check was good and the transfer was made. The check was returned, marked "no funds." Stethoff was arrested, and now reads his Bible and his beads in jail.

Chard Is Good for Poultry

Plant Is Simple Best With More Leaves and Less Root—More Protein Is Produced.

Chard is a good plant for the poultry yard. The bulletin of the New York State College of Agriculture says of this vegetable:

"Chard is simply a beet with more leaves and less root than other beets. If you have greens you will like chard. It is a 'cut and come again' plant, the outer larger leaves only being gathered each time and the young inner leaves left to develop. The culture is the same as that of other beets, in a rich soil, with the plants at least, should be allowed between plants."

Fowls for Family Table.

Whenever the fowls are kept for practical, and with proper management it will be profitable to produce each year a few ducks and geese for the family table. These are the only fowls that the average farmer who does the strong, silly taste of these water fowl have never eaten a very well-raised duckling or goose properly cooked.

Good Care of Horse.

Good care of the horse when the weather work starts pays dividends later. Clean off old hair, especially the legs, shoulders and present troublesome acres.

Water Hastens Germination.

Soaking seed in water in which peas, beans and other similar seed is soon will hasten germination.

Needful Quartet.

Remember the needful quartet on the farm—the cows of dairy culture—manure, lime, phosphorus and inoculation.

Natural Earth Silo.

The natural earth silo will yield just as good results for beet top silage as the perpendicular structure, but great care is packing is necessary.

Chickens Need Fresh Water.

Chickens need plenty of fresh, clean water these warm days.

PUTTING MOTHER IN WRONG

Small Boy Quick to Observe Point That Might Enable Him to Escape Punishment.

It was cherry time and Richard instead on running out in the orchard and eating the half-ripe fruit, his mother told him, was much better in the house where he could see if he only left the cherries until they were ripe, so they could be enjoyed. She also warned him she would punish him if he went to the orchard again.

Soon she saw him pulling off the green cherries and she went out and cut a twig switch from the tree. Richard saw her coming toward him, switch in hand, and the little lad said to her earnestly:

"Mother, if you had only left that switch on the tree just think what a fine big limb it would have been some day?"—Exchange.

Amundsen's Ultimate Object.

Captain Amundsen's plan to make his base at Cape Barrow, from which he proposes to cross the Polar ice route the 1275 miles to the North Pole, was established in Cape Colophin another 400 miles to the east, ing a total distance of 1,700 miles. As he will doubtless be unable to depart from the straight course, this distance that he will cover would be nearly 2,000 miles. Just how he will complete the actual pole is not quite clear, as it is not distinguished by any particular physical features. He will, however, be able to discover what lies there are for carrying out his proposed drift in a vessel across the polar basin, which is his main purpose of flying over the top of the earth.

Making I Even.

Spain has adopted a special tax on bachelors. It is the best to even things up. Married men ought to do a little for bachelors' pay envelopes and leave them more dollars a week for movies and car fare.

Giving Him His Chance.

Hen—Well, what are you waiting for?—Boston Transcript.

Tearing Mother's Sympathy.

"Mother," said little George, "don't you feel sorry for that poor little dog? He looks hungry."

"Yes," said his mother, "get him a plate of food."

After George had fed him he said: "Mother, do you feel sorry enough to let him stay all night?"

Don't be fanatical. It is a form of insanity.

CALIFORNIA EGGS GO TO BRITAIN

Shipped in Dutch Motor Ship Via Panama Canal They Find a Ready Market in London.

London—Due to disturbances in the regular sources of supply, British traders are finding the American butter and egg market worth increased attention. A British importer recently received a shipment of 500 cases of fresh eggs, shipped by a Dutch motor ship from San Francisco by way of the Panama canal, and as orders for 1,000,000 pounds of butter are placed with a New York firm.

The disturbances in the supply of the egg shipment, as it was then fresh from the farm, and the butter from Western Europe, which occasionally attains prices unfavorable for English buyers.

FATTEN ON WAR'S GRAVES

European "Thieves' Markets" Disposing of Enormous Quantities of American Army Equipment.

Riga.—The so-called "thieves' markets" of Europe are today crowded with the product of American factories. When the American, army wagon boxes, enormous stocks of equipment of various kinds were disposed of in France and Germany, by sale and otherwise, and much of this surplus has found its way to the many open air gatherings of the continent where men and women bargain for a small consideration. Many of the articles are of American origin, which invariably attract the attention of the most of competitors with their German rivals, competing thing Russian rivals, and in some instances, too, are on sale American-made latrine and forks, and the latter are made of old and worn collars, still carrying the mark which gives their birthplace as Troy, N. Y.

All this material is sold in competition with German, Polish, and Russian goods of the same kind.

THESE ARE HARD TIMES FOR CATS

Once Petted and Pampered Felines, When Abandoned, Can't Shift for Themselves.

Fashion and hard-looking pussy cats are beginning to appear all about the streets which show an unusual crop of "Furnished Homes" and "Toilet Apartments" signs. They are timid, of course, and shy, but they look about them in an effort to find a home in a feline creature can ever manage. They do not proud the big style of cats that lived in the alleys and cellars broke from baby days. They are not the cats that have lived in the alleys and cellars and making a dinner of raw fish and garbage on the main meal. Long prospering has made them too weak or too unwilling to tide over a hungry period. Many have been born with wings outstretched. Below very the world, Love knows how large and spacious.

"The moths chosen by Queen Alexandra for the sun dial at Sandringham, has been sent by reveal. Let them other tell of storms and showers. I'll only count the sunny hours." The poet meant when they fail to find any better. The prepared poem was written by Sun Dial Comes Back

"The sun dial has come into its own again," said a woman who has spent much time in London and in city and suburban gardens. "I'm wondering whether it is a closer general against advanced time or whether it is merely the growing fondness for the antique and bits that go to make up the beauty of a garden.

"Almost every garden that pretends to be a garden has a sun dial.

"One particularly attractive garden belongs to a family of artists, who, in modern in design—stood in a garden overlooking a bay—a Spanish in the pedestal and with marble tree just touching the brass disc was a Cupid with wings outstretched. Below very the world, Love knows how large and spacious."

"Ministers to Foolish Fad.

One woman in London is stated to have accumulated a comfortable fortune by running a "beauty parlor" for the pet dogs of fashionable society.

MANY BROADCAST STATIONS

Hard and Parts Rice Are in Line—Only Five States Have None.

The application for licenses to operate broadcasting stations to differ out parts of the country shows no sign of slacking. More than 300 have already been passed upon by the radio division of the Department of Commerce, Department of Commerce. There are now 1,000 broadcasting stations in all Hawaii and Porto Rico has each been said to the phone boasting a radiophone transmitter.

It must be remembered that the range of the broadcasting stations varies greatly, according to the power used by them. Some are operating on two five-watt tubes, or, in other words, with a smaller power output than a large number of advanced amateur use. Such stations can operate successfully only in their own particular locality.

Pasteurized Churches Now.

Radio communication is fast being established in the remote parts of the world. A new radio telegraph station has just been completed at Kaiserslautern, and was officially opened last month. It is the most powerful station and a message direct to the Hillsbrath station at Nauen. Another station is to be constructed in the same country at Marinola for the purpose of communicating with other European capitals.

Are your nerves sound?

HEALTH authorities agree that children should let coffee and tea alone, that their nerves may be kept free from the caffeine drug disturbance, and grow up in natural health.

Isn't this suggestion good for you, too?

There's charm for all and harm for none in Postum, pure, satisfying, wholesome cereal beverage which contains nothing to disturb nerves or digestion. Make the test today.

Postum for Health

"There's a Reason"

Made by Postum Cereal Company, Inc. Battle Creek, Michigan.

DILES of the most stubborn kind relieved in 3 to 10 days by the use of **MIRO** Tablets. Ask your druggist for MIRO and be convinced. AT ALL DRUGGISTS

CLIENT "SPILLED THE BEANS"

Altogether Too Truthful in Answering Question Put to Him by His Own Attorney.

"Were I giving advice to a young lawyer," said an attorney the other day, "I would advise him to be careful about giving his clients the truth. It is at least as well to know what he is going to answer in his attorney testing questions. Some time ago," he was probably thinking of the numerous and tears and tenderness of the "Saturday Evening Post." "I was a young and screwed, and last week also lost two pounds.

"Gee, you're skinny and never will be anything else," said John, when he had heard the late news. "Oh, well," said Mary resignedly, "I guess I'm only a string bean. But, after all, I'd hate to be a watermelon, like you?"

Contemporary Criticism.

From Fashionable Dress—"When the gay Burd of Alice finally inquires 'What is so rare as a day in June?' he was probably thinking of the smiles and tears and tenderness of the "Saturday Evening Post." Actually it was a cargo of bread, rolls and cake that was being a baker's wagon had been hit by a truck in spite of the "Stop, Look, Listen" sign and the driver said. On the stand the attorney was examining the client, and the client was on the stand, and he replied: "I just trotted gently along, looking the other way and thinking about nothing in particular." The attorney threw up his arms in the agony of the moment, and he said, "Tell your story in your own way
