Charles M. Brown was arrested by Montgomery county authorities last week on a charge of murder following his indictment by the grand jury. Brown is charged with furnishing Walter Bailey, a farmer, with poisoned moonshine which allegedly resulted in Bailey's death six days later.

Prof. Ira B. Shaw, 60 years old, instructor in the animal school department of Berea College, was held up in the Madison county jail Monday under $1,000 bond but Friday on charges of making a bonfire of cartons to Helen Cornelius, 12 year old daughter of Dr. Preston Cornelius, of Berea, a student. Prof. Shaw denied the charges.

SEEK PARK CAVE OPTIONS

Executive Board Starts Move to Obtain 70,000 Acres

Immediate steps will be taken by the Mammoth Cave National Park Association to obtain options on 70,000 acres of land in the state's new cave park, it was learned last week. It was decided last week at a meeting of the executive board in Louisville. Reports of the option campaign show that the association holds options on 21,000 acres of mountain land in the park. This is exclusive of the caves donated and 2,000 acres given to the association.

CARNIVAL HERE

Street Fair Being Held in Jackson's Park

The Central States Exposition shows opened here Monday at the lot of J. T. Jackson for a week's engagement under the auspices of the American Legion. This is the same organization that exhibited here last year under the auspices of the Legion.

The management of the show have assured members of the Legion that no games of chance or gambling games or immoral shows are carried.

The show will close here Saturday night. Large crowds are attending each night.

LEXINGTON MAN ACCUSED

Of Attack on 15-Year Old Adopted Daughter at Home

Lee Hambrick, 24 years old, cabinet maker of Lexington, was arraigned in Judge Dan Cox's court on a warrant charging him with having criminally attacked Mrs. Lyman, 15 years old, adopted daughter of his wife, at the Hambrick home on April 19.

The girl told authorities she was afraid to tell the story, but after Hambrick's disappearance she told her mother and sister of the attack. Mrs. Lyman before the grand jury, which resulted in an indictment being returned against Hambrick. He was brought to Lexington and is being held without bond.

SCREENS NEEDED ON KITCHEN OPENINGS

A kitchen is not complete unless the outside windows and doors are screened in summer. Screens are now provided an inexpensive way of keeping out dust and insects, by "Wil-Jo Screen Kitchens," a circular published by the College of Agriculture at Lexington. Cotton screening will last one season, and is much better than no protection against flies and mosquitoes. Cloth screen cutting can be tacked to the outside of the windows, but wire screened frames made to fit the windows are more satisfactory. One of the most important steps in improving a kitchen is to see that doors and windows are properly screened. Much of the kitchen work can be done on a screened porch during the warm months. Even meals can be served there.

MUST CANDLE EGGS

Compulsory egg candling, which becomes effective May 15, for specified period under the 1-in-1 law passed by the 1924 Legislature, is to be continued under the new bill passed by the 1926 Legislature and which becomes effective June 17.

In addition to requiring candling of eggs, the new bill provides for the poultry of "7-up 10 dozen" by the Board or sanitch by July "17 for the enforcement of the law and inspections. Candling of eggs is required from May 15 to January 15. The fee for dozens will be 1-in-1 less than cashed less is $2 per year, and for dealers who of per providing slider of the Maysville district.

THE COUNTY AGENT'S DEPARTMENT

The Mexican Bean Beetle

Many requests have been coming to me recently for information concerning a method of controlling the Mexican Bean Beetle. From the damage done during the past year by this insect it seems that those who grow beans this year will certainly have to use a very thorough method of applying poison and to apply the material soon after the seedlings of the leaves. Care will have to be use in selecting the poison to use since many chemicals when applied to beans will destroy the plants by burning the foliage. However by the timely and thorough application of the proper material this insect can be controlled.

Magnesium Arsenate Dust already mixed and ready to apply is the material that can be secured locally to control this insect. This dust comes ready to put on and is most to be applied with a good dust gun being sure to put it on the beans when the plants are wet with dew. The underside of the leaves must be well covered with this poison. Good results may be obtained by mixing a dust using one pound of Calcium Arsenate, one pound of dry sulfitor and four pounds of slaked lime. Mix these materials together thoroughly, powder them finely, and apply the same as recommended for Lead Arsenate.

It may seem difficult to apply such a dust to the underside of the leaves and yet if you use a good dust gun you will find it a very simple matter to make a thorough application of this material. Three or four applications should be made during the season, being sure to begin the first application as soon as the plants.

Stomach Worms In Sheep

Each year the damage done by the Stomach Worms in Sheep, is very serious in Lincoln county and vicinity. The damage is readily recognized by those who have close attention to their flock.

For the past few years Nicotin Sulphate has been recommended as a method of destroying the worms, however, during the past few years the Experiment Station has been working on a simpler and less dangerous method of combating this trouble. As a result they have developed the Iodine treatment which is very effective in destroying worms in sheep and at the same time is much less harmful to the sheep than Nicotine Sulphate. To be free from the damage done by worms during the summer you should begin to dosen your flock now, use the Iodine treatment. This Iodine is known by your druggist as Lugol's Solution. Secure this material from a reliable druggist (this mix) ounce of it with one quart of water and dosen your flock and your old sheep six ounces of the mixture. Lambs should be given from ounces of the mixture. This one ounce of solution mixed with one quart of water will drench about six lambs or twelve lambs. To keep your flock free from worms this treatment should be given and repeated every month until late fall. In this way your flock will be drenched three or four times this summer. This will completely eliminate worms from your sheep and result in stronger ones and better quality lambs that will be profit from your flock.

DON'T DOCTOR WELL CHICKS

Don't doctor well chicks, warns Prof. J. E. Smith, head of the poultry section of the Agricultural Experiment Station. Make them well, watch and many chicks lifted by

The use of tonics and medicines for the cause of bloody diarrhea, or "bloody scours" in young chicks. In most cases fairly successful in controlling this disease by using a 7-3 group tablet. Bicarbonate of soda, one ounce of water or milk for one chick. Discontinue its use for work out then repeat if the trouble comes up again. This solution will not hold in metal containers, and should be kept away from stock and people.

The first symptoms of bloody diarrhea are a ruffled appearance of the feathers, drooping wings, bloody droppings. It usually affects chicks about three weeks old.

Gages are caused by a wet room which the chicks pick up from the ground. As these worms are most injurious when the gage is wet, chicks should be kept confined until the grass is dry. This may be done by of controlling gages is to move the chicks to fresh ground. The old yards should be limed, plowed or sown to some crop.

Bronchial Whites Diarrhea is becoming prevalent in Kentucky, according to Prof. Smith. It usually starts about the time the chicks are feathered and affects some of the heavy boxes. The control of this trouble is difficult and the methods supporting its presence, should write to Prof. Smith for detailed information how to combat it.

THEY SUGGESTED DUCKS

An Irishman was arrested last week before a Justice of the Peace seeking advice.

"Yer Honor, I kapes hens in my office, but 'tis' water pipes busted on me, an' me hens is all drown-ed."

"Sorry I can't do anything for you," replied the Justice "you kin let loll your troubles to the water company."

A few days later Pat returned. "Well, what now? What did the water company tell you?"

"They told me, yer Honor, to kape ducks."

SUMMER CARE OF GROWING CHICKENS

When chickens reach the brooder stage (8 to 10 weeks), many successful poultrymen separate cockerels from the pullets, observe extension field agents for the Kentucky College of Agriculture. Cockerels grow fast and make better gains when they weigh around two pounds. Brooding the cockerels 15 lbs. they will give the pullets more house room, and they will grow faster. It is well to remove all slow growing pullets also, as they seldom mature into good layers.

If pullets are to come into production by Nov. 1, and be laying when eggs are the highest price, they must be fed all they will eat from six weeks of age. Growing pullets from free range and plenty of shade, it is well to feed from a self-feeder. An abundance of good fresh water should be available at all times. Rich grain and mash may be fed from the same hopper by shutting a portion off.

A good grain mixture for growing pullets may be made of 200 pounds of corn and 100 pounds each of wheat and oats. Or the ends of the wheat may be left out, feeding a mixture of 200 pounds of corn and 100 pounds of wheat, or one of 200 pounds of corn and 100 pounds of oats. A coarse, cracked corn may be fed and wheat the grain can be used. Feed wheat whole.

A good mash for growing pullets may be made of 150 pounds of bran, 150 pounds of middlings, 100 pounds each of cornmeal and tankage, 50 pounds of meat scraps, 50 lots with all the milk they will consume. Cod liver oil like is done no tankage need be fed.

SEES NEED OF MORE SILOS IN KENTUCKY

With 1,500,000 beef and dairy cattle in Kentucky, Dean Thomas W. Woods, field agent for the animal industry of the College of Agriculture, sees a need for more silos. There are 14,000 silos now in the state are only a third of the number needed, he said in a recent pep talk.

The average acre of Kentucky corn will make about six tons of silage, he said, while "A 50-bushel crop will make about 10 tons of silage. This is enough to supply roughage for four cattle for a period of 180 days, the winter.

For feeding dairy cows or wintering beef cattle, corn in the form of silage is in the most economical and efficient than when fed out of the shock. For fattening beef cattle, corn in the form of silage is more profitable than when fed as dry corn or in the shock. Where the fodder becomes damaged, as it often does in rainy seasons, the difference is still greater in favor of silage.

Another factor favoring silage is the reliability of the supply. The fine stalk is the best part of the plant to be produced. Dry weather may cut off the yield of grain but silages can still be made. Many late crops which otherwise would be lost can be saved by the silo."

The Dean's statement was made for sons for more silos as follows:

"Kentucky needs more corn plants. It is more palatable than any other feed for the cattle. Corn stalks are more easily digested in the form of silage. It will feed more cattle than any other feed on land. The silo is a guarantee of an abundant feed supply. Silage is the most convenient form in which to feed the whole corn plant. The silo saves late crops or deadfalls from the ravages of the elements. Turning corn into silage clears the land for the next crop."

KENTUCKY FARM FACTS

(Taken from county agent reports.)

It is estimated that 1,800 acres of alfalfa were sowed in Breckinridge county last year. Much more clover also was sown.

Over 1,000 acres of strawberries were set in Ballard county this spring. There also is much in other counties in the state.

Webster county farmers are considering the growing of 1,000 acres of soybeans.

Many agricultural club members in Estill county are raising more than 100 pigs.

Several dairy promotional meetings were recently held in Trigg county. Many beef cattle are raised in Trigg county.

Twenty-four Washington county farmers have formed a pasture club in the state tobacco fertilizer contest.

General Pershing, a junior agricultural club member in Laurel county, is growing 10 acres of sweet potatoes.

Twelve carloads of agricultural implements were sold in Trigg county in April, making a total of 17 this year.

Homer R. Koch, Lee county, who was the state junior agriculture, is also showing his father how he will try or the same honors this year. His grow 114 bushels on acres last year.

There will be 5,000 to 6,000 acres of soybeans planted in Shelby county this year.

Three cooperative dairy bull associations have been formed in McCracken county this year.

The growing of more sweet potatoes, to supply fruit for home canning is being promoted in Hancock county.

NOT TRUE TO LIFE

Simon Legree, the City Editor, "Why don't you write this story up for the Times?"

Earnest Young Reporter: "Why what is there wrong with it?"

Simon Legree: "What's the matter with it? Great Scott! haven't you eyes? There was a sound of a shot, and immediately the street swarmed with policemen."

Which paint for your floors?

Practical tests prove Devoe Quality

PRACTICAL painters have tested different floor paints that have been used for spreading equal quantities of each, side by side on the floor of a room.

And wherever such a test has been made, the Devoe Floor Paint has proved its superiority and economy.

Devoe Floor Paint is made in more beautiful colors. Apply it at night and it dries by morning, with a tough, durable finish that protects the floor. When applied according to directions, it is guaranteed to give satisfaction.

RESULTS THAT LAST

Proven By Carlisle People

Thousands of kidney sufferers have tried remedies that offer only temporary benefit. That's why discovering that a kidney remedy has earned a reputation for lasting results and there's plenty of proof right here in Carlisle. Doan's Kidney Pills are the kidney remedy.

Mrs. E. A. Thomas, 101 E. Main St., Carlisle, says: "I had severe backaches. I had dizzy spells and often had to grasp something for fear of falling. My kidneys were weak and I suffered from severe pains. After using Doan's Pills, my kidneys were regulated and all other troubles left."

Mrs. Thomas gave the above statement Nov. 16, 1920 and on May 2, 1924, she added: "I haven't had a sign of kidney trouble since Doan's cured me."
