Egg Records That Startle Experts!

Tuxedo Eggmash, the marvelous egg-maker, is the vital factor in thousands of amazing egg records. This is being proved every month—every week; when the ration is changed to Tuxedo, egg production immediately increases! Always the increase is substantial—often astonishing.

Formulas and milling processes make this big success. The formula of Tuxedo Eggmash includes ingredients that make eggs and build bodies, one ingredient being PURE CANE MOLASSES, a Tuxedo discovery.

You, too, can increase your flock production. Start quickly! We have Tuxedo Eggmash for you.

Baby's no Trial to me

When the children "get on your nerves" you need KARNAK. Days that housework seems a burden, and any time when you are "out of sorts" this BOTTLED SUNSHINE puts you back in fine spirits! Just one spoonful of this DELICIOUS blend of fine herbs, roots, and barks—and you feel like a new person, feeling like another person altogether. It's NATURE Unfailing. And utterly harmless.

Learn to lean on KARNAK'S gentle stimulus when you are the least sluggish. It activates every organ; helps in a perfectly natural manner to make them function as they ought. Appetite improves; food ACHIEVES with you. Sleep is sound, and you wake up refreshed. Young and old are helped by this scientific, tried-and-true, at all druggists, in a BIG bottle.

Loosening the Grip of Time

ASKING no favors, playing no favorites, time gives to every man twenty-four hours every day.

Nor can one moment be added. To scientific skill and human ingenuity remains the task of making the most of the time that we have. How well these efforts have been rewarded is common knowledge. Today man completes in moments—with a mind free for other duties—work that a few years ago required hours. Modern transportation draws distant points hours closer.

Working hand in hand with each advance—faster labor, time gives to every man twenty-four hours every day.

Your connections even quicker than you did last year, much quicker than the year before.

The grip of time is being loosened, but it must be loosened even more to meet the needs of tomorrow. A refusal to be content with present accomplishments is the spur that urges the 23,000 employees of this company to exert their best efforts to make your telephone service faster and better.

TURKEYS OFTEN SELL WELL LATER IN YEAR

The December farm price of Kentucky turkeys has been as high or higher than the November price in 18 of the last 17 years, according to Dana G. Card of the Experiment Station of the University of Kentucky.

This fact might well be considered by farmers, especially before selling unfinished birds for the Thanksgiving trade, says Mr. Card. Well finished birds probably should be sold, but undersized and thin turkeys should gain in both weight and value by holding for a later market.

A report issued recently by the United States bureau of agricultural economics indicates that approximately 50 per cent of the market turkeys in the United States are being fed for the Thanksgiving market this year. While Thanksgiving is the time of year when most of the turkeys are sold it does not necessarily follow that it is the time of highest prices. During the last 17 years the farm price of turkeys in Kentucky has averaged 21.1 cents per pound in October, 23.5 cents in November and 24 and 23.4 cents per pound in December and January, respectively.

In 15 years out of the last 17, turkey prices in Kentucky have been as high or higher in December, than in the preceding month. In six of these years the increase in price has amounted to a cent or more per pound. In the two years, 1923 and 1924, however, when declines in price did occur between November and December, the reduction was quite severe. If turkeys must be held from December to January or later, for sale, there is a greater risk of encountering lower prices although even here in about half of the years since 1912 the change in price has been less than one-half cent per pound in either direction. In five years, however, the Kentucky price exceeded 2 cents or more per pound from December to January, while in only one year did the price increase as much as 2 cents.

Turkeys that are fat and well finished for the Thanksgiving and Christmas markets should be sold, but birds which are not finished usually will find a good market later if they are good quality turkeys.

ADVISES WINTERING ONLY STRONG BEES

The wintering of only strong colonies of bees is advised by Prof. W. A. Price, head of the department of botany and entomology of the Experiment Station of the University of Kentucky.

Colonies that are weak in the fall will not survive the winter, and he suggests that they be united with strong colonies. This can be done by destroying the queen of the weak colony, removing one bottom board, and placing one brood chamber on top the other, with two thicknesses of newspaper between them. This makes a two-story hive for wintering.

Queenless colonies may as well be broken up by shaking the bees and distributing the combs of honey where needed. The bees can be shaken on the ground and the hive moved away. They then will enter another hive they choose.

Each colony, says Prof. Price, should have sufficient honey or sugar syrup to enable it to rear the first and second broods in the spring without feeding it necessary to bring food from the outside. This means that there should be 50 to 60 pounds of honey in the hive when it is put up for the winter.

Good foods are sugar syrup or basswood, linden and white clover honey. Honeys that contain much indigestible material of the gum or resinous nature should not be used for winter stores. Such honeys are produced from the late blooming flora, asters, golden rod and the like. Where there is a considerable quantity of such honey in a hive, a part of it should be removed and light, early gathered honey substituted.

BETTER FEEDING PAYS DAIRY MEN

That it pays to feed well is shown in a study which Joe Magotte, an extension field agent for the College of Agriculture of the University of Kentucky, made of four dairy herd improvement associations. He found that dairy men feeding well received slightly $4 for every additional dollar spent for feed, compared with the returns from cows not fed so well.

Cows in the poorest producing group averaged 125 pounds of fat in a year, or were about the average Kentucky farm cow. Their grain cost $19 and their roughage $35, while the average value of their products was $77, or $23 above their feed cost.

Cows in the second group averaged 219 pounds of fat, ate $31 worth of grain and $35 worth of roughage, and returned products worth $127, or $63 above feed cost.

In the third group, the average production was 292 pounds of fat. The average value of all products was $181 per cow, while grain fed cost $44 and roughage $37 per cow, leaving $100 above feed cost.

The best group of cows averaged 389 pounds of fat in a year. They consumed $59 worth of grain and $40 worth of roughage, while their products were worth $236 each, leaving a return above feed cost of $135 per cow.

Comparing the best group with the poorest group, $40 spent for additional feed returned products worth $177 more per cow. Of course, they were better fed cows.

"INSIDE" INFORMATION

Veal chops have lost fat in proportion to lean meat than any other chops. They are likely to dry out considerably in cooking unless protected by a coating of egg and bread crumbs.

See that the foods your child eats include each day all of these different kinds of food: milk; eggs, meat or fish; vegetables; fruit; whole-grain cereals; and butter or cream.

Don't wait for Thanksgiving or Christmas to make cranberry jelly or cranberry sauce. Either one is excellent with any meat where a sweet-tart accompany is liked. Cranberries are on the market now.

Hog Feed, Egg Mash, Dairy Feed, Horse Feed, Corn. I am ready now to supply your wants in this line. Call 87, prompt delivery if you wish it. Fisher Henry's Coal Yard.

KEEP SHADE TREES TRIMMED

By Edgar W. Cooley, Agricultural Extension Department International Harvester Company

The best time to trim ornamental trees is late in the fall, after the leaves have fallen, or early in the spring, before new leaves appear. All the branches are then exposed and it is easy to give tables the proper attention and treatment.

In pruning shade trees we should always trim out:

All dead, dying and diseased wood.

All stubbed and bruised parts of branches.

Every branch which rubs against another branch and wears through the outer bark, exposing a portion of the tree.

All branches which have grown too long or slender or that extend outward in such a way as to destroy the natural and characteristic form of the tree.

All branches (except those of evergreen trees) which hang so low as to make it difficult for people or vehicles to pass under them.

In trimming evergreen trees we should cut out only the dead and unsightly branches. An evergreen is always more attractive when the lowest branches sweep the ground.

We should make all cuts along the edge of and parallel to the main trunk or branch of the tree. This will leave a flat surface which can be made smooth to conform with the contour of the tree. Never leave a stub sticking out from the trunk or branch. Stubs for and harbor insect pests. They are unsightly and dangerous. During a heavy wind storm they are apt to be torn loose and drop to the ground, not only injuring the tree but endangering people who may be passing.

We should never use a dull saw. A saw that is sharp and properly set will make the work easier and the cuts will be smooth and clean.

After a cut is made the exposed wood should be covered with coal tar, yellow ocher or white lead. This will keep the sap from saturating the exposed wood and rotting it, and will also help to keep away boring insects.

FEDERAL OFFICIALS WAR ON FAKE LIVESTOCK REMEDIES

Fake cures for hog cholera have practically disappeared and contagious abortion "cures" are rapidly disappearing from the market through the persistent activities of officials of the United States Department of Agriculture, who have succeeded in ridding the market of hundreds of nostrums which, not only lacked curative properties but were actually harmful because they interfered with proper preventive measures.

Dr. H. E. Moskey, veterinarian of the Food, Drug, and Insecticide Administration, says the "worst offenders are alleged cures for diseases for which there are no known drug cures. When a sick animal does not immediately recover under competent medical treatment the owner sometimes turns with all good intentions to some preparation which the manufacturers claim will not only effect a cure but 'purify the blood' and 'improve the digestion.'"

Several contagious abortion "cures" lately taken off the market were found to be composed only of table salt with a slight addition of carbolic acid. This stuff sold for a dollar a pound and its effect on stock was no different from that of ordinary salt. It was widely advertised as a preventive and treatment for contagious abortion and other abnormalities resulting from the abortion disease. Companies manufacturing such "cures" were found to have sales of over $1,000 monthly.

Twenty so-called abortion remedies have been removed from the market recently by the Food Drug and Insecticide Administration. It was necessary to bring only one to trial.

Numerous misbranded hog cholera remedies have also been removed from the livestock drug market. Their makers claimed some of these preparations would not only cure hog cholera but would also be "effective in destroying lung and intestinal worms." Department of Agriculture scientists found both claims to be false.

THE FUTURE

Tis well that the future is hid from our sight,
That we walk in the sunshine nor dream of the cloud.
We distinguish a flower, think not of the blight,
And dream of the loom that may weave us a shroud.

It was good, it was kind in the Wise One above,
To fling Destiny's veil over the face of our years,
So we see not the blow that shall strike at our love,
And expect not the beam that shall dry up our tears.

Though the cloud may be dark, there is sunshine behind it,
Though the night may be long, yet hope is still near,
Though the vale may be deep, there is music around it,
And hope, mid our sorrow, bright hope is still near.

Call 290 FOR Dry Cleaning Laundry and Service

Robt. Mann, Agt.
Lexington Laundry Co.

It's Going Fast!

Buyers are rushing to take advantage of our great Closing Out Sale. Entire stock of Hardware, Farm Implements, Stoves, Ranges going at Cost for Cash. Everything in the house, EXCEPT Cream Separators, goes.

EXTRA SPECIAL—Huenfeld Boss Heaters, the circulating air type, that sold for $50, at $37.50. Others that sold at $60 going for $47.50. Don't miss this opportunity.

Having decided to quit the hardware business, I will sell my entire stock, beginning on the above date, at wholesale prices for cash. Everything goes, with the exception of cream separators, which I can't sell at wholesale prices.

The Opportunity of a Lifetime

Opportunities like this come seldom to any community. My entire stock is new, high-class, standard merchandise and to be able to buy it at wholesale at this season of the year is like finding money. Don't delay. People will be quick to take advantage of this great selling event. Make your purchase while the stock is full.

Will Sell As A Whole

At any time during this sale, will sell the business as a whole to any man who desires to purchase a money-making business, one of the best stands in town. My only reason for selling out is that I don't like the hardware business and have other interests that demand my attention.

Carlisle, Kentucky

Allen's Parlor Furnace

Modern Heat With Oldtime Fireside Cheer

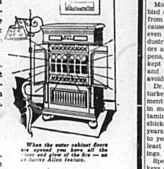
SEE this new type furnace which is placed above the floor. The latest development in home heating. Does the work of several stoves, ranges, heaters or fireplaces.

Heats the whole house. Circulates clean, moist warm air. As beautiful and as easy to clean as a piece of furniture.

We guarantee even heating in all parts of your home and a big saving in fuel.

Don't buy an old-fashioned stove when you can get this pipeless furnace for almost the same amount of money!

Come in—let us show you how Allen's, will give you more warmth in your home in coldest weather.



When the outer cabinet there are opened you have all the heat you want, just as in a Jewel Air Blast Furnace.

Heat Radiating Fins

Another exclusive feature of the Allen Air Blast. Increasing heating surface 100 percent—saving fuel. Actual tests show that the fins cut the heating bill—saves coal.

C. R. King

BEST TO HAND FEED CORN ON PLATFORM

The Experiment Station of the University of Kentucky conducted a test to determine the rate of gain and cost of gain of hogs fed ear corn in the mud as compared with hogs fed ear corn on a platform and hogs fed ear corn from a self-feeder mounted on a platform. The test was for a period of 70 days.

Hogs receiving ear corn on a platform made an average daily gain of 1.67 pounds per head and required 5.27 pounds of ear corn per pound gain.

Hogs fed ear corn from a self-feeder mounted on a platform made an average daily gain of 1.68 pounds per head and required 5.79 pounds of ear corn per pound of gain.

Hogs fed ear corn in the mud made an average daily gain of 1.35 pounds and required 6.26 pounds of ear corn per pound of gain.

Mrs. Minnie Coleson, of St. Louis, won a divorce when she testified that her husband had their maid eat with them and forced his wife to wait on the table.

TURKEY RAISERS TOLD TO USE PENS

The Turkey has lost its privilege to range over the farm and roost in tree tops, in the light of recent developments in the art of raising the holiday bird, 300 persons attending three days held at the recent meeting of turkey raisers at the Experiment Station of the University of Kentucky.

Modern methods decree that the big bird should be raised in pens, protected from parasites and diseases which have caused heavy losses in the past and even threatened to destroy the industry. By hatching them in incubators and raising them in brooders and pens, away from chickens, they are kept free from worms, lice and mites, and the fatal blackhead disease is avoided.

Dr. W. A. Billings, a Minnesota turkey expert, described the confinement plan of raising turkeys, now used in many states. Only clean, uncontaminated ground is used, where no chickens have run for at least two years. The pens are rotated from year to year. They should be located at least 200 yards from the farm buildings.

Speakers stressed the fact that turkeys and chickens cannot be raised together because of the blackhead menace, which is spread by chickens.

According to figures presented at the meeting, it costs 4 to 10 cents a pound to feed a turkey to market condition. This fact, speakers said, makes turkeys one of the most profitable farm enterprises, when methods are employed to prevent losses from disease and parasites. Feeding balanced rations was considered an important essential.

Robert White, a Bourbon county farmer, told of his experience raising 800 turkeys by confined methods, this year. He considered it the only etc., this regrow particularly favorable

USE LEAVES AND WASTE FOR COMPOST

By L. A. Hawkins, Agricultural Extension Department International Harvester Company

Compost is fine and made by mixing organic materials in a pile, and allowing them to decompose and become a more readily usable plant food concentrate, as soil for potted plants, beds or garden crops. It is one of the most important things in the greenhouse operators business and much emphasis is placed upon proper preparation and care of the compost pile.

Leaves from trees and bushes, lawn trimmings, prunings from herbaceous plants, tomato vines, corn stalks, etc., can be used with earth for making compost soil. Often alternate layers of sod and manure are used in the pile. Compost should be built up six to eight feet wide, two to four feet high and as long as desired. First put down a layer of manure or waste, four to six inches deep, then cover with a six-inch layer of sod or soil and repeat until the desired height is reached. Cap with a covering of soil. The sides should be as near perpendicular as possible and the top flat to catch the rain. In dry weather, watering may be advisable.

The compost pile should be made six months or a year before the soil is needed for use. A few weeks before using the soil, the pile should be cut, turned and forked over to thoroughly mix the whole affair. It is better if it can be stirred and mixed two or three times at two-week intervals before using. Late summer is a good time to make compost for the next season's use.

Compost soil is ideal for potted plants, greenhouse beds, hotbeds, flats and seedlings. It is the best seed bed material for vine plants, tomatoes, etc., this regrow particularly favorable growing conditions. It carries an abundance of fertilizer elements and will help amazingly in promoting vigorous growth, heavy fruiting, and bloom of garde nand flower plants.

A small compost pile in one corner of the garden offers the best means of using and refuse, as the pile can be getting rid of lawn trimmings and started any time and gradually built up as the materials are available. This compost material will be found an excellent top dressing for lawns.

STATION REPORTS ON STEER FEEDING TEST

The Experiment Station of the University of Kentucky has reported on a second test made to compare the daily rate of gain and economy of gains between steers fed corn during the winter and finished the following summer on grass without corn, and steers carried through the winter on the same feeds, with the exception of corn, and finished the following summer on grass with corn. The test was made over a period of 229 days.

The final average weight of the lot receiving corn in winter was 1,308 pounds and the average gain per steer 264 pounds.

The final average weight of the steers receiving corn on grass was 1,350 pounds, their average gain being 304 pounds.

The net returns over the feed consumed and shipping expenses were $53.48 per steer for the cattle that received corn during the winter and $53.48 per steer for the cattle that received corn on grass. The initial cost of the cattle was $9 per hundredweight. Both lots sold for the same price.

There was little difference in the dressing percentage of the two lots, but the steers receiving corn during the winter showed a slight advantage in this respect. There was practically no difference in the quality of the carcasses.

REPORTS ON FUNDS

(Cynthiana Democrat)

Acting on the report of an auditor, the Rowan county grand jury at Morehead, has returned an indictment against the county superintendent of schools for misfeasance in office, the misdirection and application of funds. Approximately $47,000 of the school funds have been used for unauthorized purposes, according to the auditor's report.

This is but one more illustration of the mounting scandal among school boards, and all others handling public funds, to publish a full, complete and itemized statement of receipts and disbursements, as the law directs. We doubt if such a statement ever has been printed in Rowan. If it had been someone would have caught the irregularity and the person responsible would have been called to account before. Yet there are those who always oppose publication of full reports. Of course it causes somebody to do more work in preparing such reports and it costs more to have them published, but the public, the people who pay the taxes, benefit in the long run.

The press dispatch from Morehead reads as follows:

"J. H. Howard, Rowan county school superintendent, has been indicted for misfeasance in office as the result of the grand jury investigation of the report that school teachers have not been receiving their full salaries. The grand jury acted on the report of an auditor who examined the records.

"According to the auditor, J. D. Peterson, who made the investigation upon the direction of Circuit Judge Henry Prewitt, approximately $47,000 of the county school funds have been used for unauthorized purposes. The report does not show that Mr. Howard has received any of the money, but indicates that the money was used for purposes other than was intended.

"This penalty carried by the charge of misfeasance in office is a fine of $100 to $1,000 and removal from office if convictions is had."

Always leave at least an inch of the stem ends on beets when cooking them, so as to prevent what is called 'bleeding' or having the color run out. The skins are left on for the same reason. To peel cooked beets quickly drop them for a moment into cold water and the skin and stem can be slipped off. Serve hot, sliced or diced, with butter, salt, and pepper.

The Carlisle Tobacco Market

will open

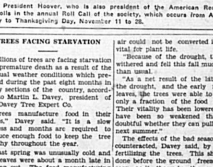
Thursday, December 5, 1929

and hundreds of farmers have signified their intention of patronizing their home market. They can well afford to do this because every sale must be satisfactory to the grower.

We earnestly solicit your patronage on this basis.

FARMERS TOBACCO WAREHOUSE COMPANY
CARLISLE, KENTUCKY

PRESIDENT ENROLLS IN RED CROSS



President Hoover, who is also president of the American Red Cross, enrolls in the annual Roll Call of the society, which occurs from Armistice Day to Thanksgiving Day, November 11 to 25.

TREES FACING STARVATION

Millions of trees are facing starvation and premature death as a result of the unusual weather conditions which prevailed during the past eight months in many sections of the country, according to Martin L. Davey, president of the Davey Tree Expert Co.

"Trees manufacture food in their leaves," Davey said. "It is a slow process and months are required to produce enough food to keep the tree healthy throughout the year.

"Last spring was unusually cold and the leaves were about a month late in coming out. The food manufacturing process was retarded. Then came the drought—there was no rain to speak of in many sections for over two months. Without water, minerals from the soil and nitrogen from the air could not be converted into food vital for plant life.

"Because of the drought, the leaves withered and fell this fall much earlier than usual.

"As a net result of the late spring, the drought, and the early falling of leaves, the trees were able to store up only a fraction of the food required. Their vitality has been lowered; many have been so weakened that it is doubtful whether they can pull through next summer."

The effects of the bad season can be counteracted, Davey said, by property fertilizing the trees. This should be done before the ground freezes or as soon as it thaws in the spring, he stated.

The District of Columbia contains more than 7,000 persons per square mile.

LABOR HEAD URGES SUPPORT OF RED CROSS

"Invariably it is the masses of the people which suffer most when disasters occur," stated William Green, president of the American Federation of Labor, recently.

"Because they suffer most and because of their helplessness, the single creations of the Red Cross organization take on added significance and importance. No doubt many lives among these particular groups are saved through the prompt service which this organization gives.

"Because the American Federation of Labor appreciates this fact, we have supplemented the appeal of the American Red Cross it each Roll Call period for membership from the great mass of working men and women and their families.

"The continued service o the American Federation of Labor in this most humane and unselfish work will be most cheerfully rendered."

Mr. Green is a member of the Board of Incorporators of the American Red Cross.

NURSES ENROLLED WITH RED CROSS FOR SERVICE

Enrolled with the Nursing Service of the American Red Cross at Washington are 43,000 nurses, qualified under the society's regulations, who may be summoned to service in time of disaster or other emergency. From the Red Cross enrollment were summed 20,000 nurses in the World War. These Red Cross nurses are the standing reserve of the Army and Navy Nurse Corps of the United States, and are also called upon for service in other governmental health services.

Little St. Eustatius Island in the Dutch West Indies gave refuge to American citizens during the flowcation. The hurricane of last September struck the island, causing heavy loss. The American Red Cross was glad to send a small cash relief fund in recognitance of the historic friendship of the island folk for this republic.

Two Davenport, Iowa, girls trapped by fire leaped from a window to a telegraph wire and slid 30 feet to safety.
