Dr. Pierce's Pamphlet Common Sense Medical Adviser, 1008 pages, sent for 21 one-cent stamps. Address, World's Dispensary Medical Association, Buffalo, N. Y.

INVENTORS AND INVENTIONS.

How Their Practicability and Improvements are Thoroughly Tested.

"It like the place where inventors' ideas are put into practical shape?"

"Yes, this is where it is done."

"Do you have many inventors come here with worthless or gimcrack contrivances?"

"Why, no; we don't encourage them. When a man comes in with a new idea we ask him to make a model. If he can't do it himself we have machinists in our employ who will do it for him at a reasonable price. Then we test the invention and see whether it is practicable. If it is we tell the inventor so, and if he wishes to have it patented we advise him to do so. We don't encourage him to waste his money on worthless inventions."

"Do you have many that have got as far as this?"

"Why, I should say we have. Not a week passes that we don't have one or more. Sometimes we have a dozen or more. Most of them are good, but so far they have not been of much practical value. Some of the people's inventions while perfecting his idea have made improvements in other machines, for instance, in flour mills, in harvesters, in flour barrels, in furnaces, in stoves. He never patented his invention, but the other men did and have had lots of money from it. Some of the inventions we have had here have been very simple, and others very complicated. Some of the latter class have been very successful, but the majority of the simple ones have been failures
