Commissioner's Sale!
LAND!

NICHOLAS CIRCUIT COURT.
W. T. Sanders, ... Plaintiff,
W. E. Applegate, &c. ... Defendants.

By virtue of a judgment and decree of sale of the Nicholas Circuit Court, rendered at the May term thereof, 1898, in the above cause, I shall proceed to offer for sale at the door of the Nicholas Court House at Carlisle, Ky.,

Monday, June 13, '98,

at 1 o'clock, p. m., or thereabouts, (being county court day) upon a credit of six months, the following described property, to-wit:

A certain tract of land lying in Nicholas County, Ky., and bounded and described as follows: Beginning at a stone in the line of Wm. Applegate's land, corner to Wm. Applegate and Jno. Applegate; thence with the line of Jno. Applegate's land N. 45 E. 20 poles to a stone in the middle of the ditch; thence N. 45 W. 20 poles to a stone in the middle of the ditch; thence S. 45 W. 20 poles to a stone in the line of Wm. Applegate's land; thence with the line of Wm. Applegate's land S. 45 E. 20 poles to the beginning, containing two acres, more or less. Being the same land conveyed to Wm. Applegate by deed of record in Deed Book No. [illegible] page [illegible] in the Nicholas County Clerk's office.

Said sale will be made to satisfy a judgment and decree of sale of the Nicholas Circuit Court rendered at the May term thereof, 1898, in the above cause, in favor of W. T. Sanders, Plaintiff, and against W. E. Applegate, Defendant, for the sum of $100.00 with interest thereon from the 1st day of January, 1898, until paid, and the cost of this action.

TERMS: A credit of six months, the purchaser to execute bond with approved security, bearing interest from the day of sale until paid, and the title will be retained as ultimate security for the purchase money.

This May 31st, 1898.

WINE MADE FROM LEAVES.

Curious Results Obtained by a French Druggist in His Experiments.

Wine growers are much interested in, but somewhat disturbed at, a story of a new process of wine manufacture. It seems that a French druggist has succeeded the idea that the flavor of the grape is due to the presence of tannin in the leaves of those plants, and proves from them into the fruits. The Parisian adds that the leaves of the vines contain both give off, especially after a little rain, a sort of vapor which seems to be the home of the berry, appears to favor this view. The Frenchman, however, goes further, and says that the pleasant taste of the apple, pear or grape is prepared in the leaves of the respective plants, although it may be carried to the fruit by the sap. He therefore tries with the thick covering. After reading the leaves he adds a fermenting agent such as yeast to them, steeps upon the odorous and tasteless glycerine, and obtains a liquid which is said to be the fruit proper in aroma and pleasant taste. What was formerly sought in the leaves combined with grapes and other fruits is now claimed to be done in a separate process with the leaves of the plants in a fermenting vat. The liquid thus obtained is then placed in water containing 15 per cent. of sugar, and yeast is added. As the process continues there is more of the odor, and when the fermentation is complete the wine has the aroma of the whole fruit in combination, which possesses the fine "bouquet" of the fruit and the fragrance from which the leaves were taken. The public is asked to wait a few years for the product to be placed on the market, a beverage lasting and small enough to be within the reach of the poorest laborer.

THIS YEAR WORTH WATCHING.

Not Since 1892 Has There Been So Much Interest Manifested.

A German statistical scientist, in an article in the Augsburg Zeitung, calls attention to the fact that the presidential election this year will be the seventeenth that has not appeared since the year 1800. Twice in that period—1840 and 1860—Presidents were elected with unusual interest, and twice—1864 and 1892—with unusual excitement, but the events of this remarkable year, he says, will be found to be more than can be paralleled by all the five figures added together. The first of the series was distinguished by the fact that it was the first election after the close of the Napoleonic wars, and the first after the death of Washington. The next eight have existed since the 1830, and the first of the series was the first election after the death of the first figure from the 1850s and the value of the dollar was greatly increased. These peculiar years seem to have been 1840, 1860, 1880 and 1892. The year 1898 is the first of the series in the peculiar condition of 17 symbol years, and the figures 1, 8, 9, 8 added together give the figure 26.

WHY YOU "SEE STARS."

Cause of the Singular Sensation Experienced When Receiving a Blow.

If a man feels as we so often do he has had violently on the ear or on the pavement, he will probably see stars. The cause of the "see stars" is the presence of the curious phenomenon is found in a peculiar condition of the optic nerve. The retina of that nerve is so nervy to the slightest touch that a blow on the head, or even nothing in the least hard, but it is susceptible to no other impression. Consequently, if acted upon by any other agent, it communicates to the brain the sensation of light. Hence the sparks of fire seen by sending along the fiber flashes of light. The same effect is produced by electric or other instrument and from the eye to sensation of pain, but simply that of flashes of light. The "see stars" of the blow on the eye or the fall on the ice is caused by the shock to the optic nerve, which produces no sensation of pain or other feeling, the optic nerve is not affected by pain, but only by the shock by flashes, sparks and "stars."

They Wouldn't Leave.

Planted before a big case of Chinese curios in the Metropolitan museum in New York, the other day, stood three Chinamen who had evidently come there by appointment, for they were talking to each other in their native tongue, although it may be questioned whether the word "talking" which they would take if it were translated into English, is the proper one to use in describing the animated conversation in which they were engaged. They were in no hurry to go, and they were not to be moved from their position by the curious gaze of the passers-by. Finally one of the party, who had evidently been in this country before, and who was somewhat familiar with its customs, approached a guard and asked him in English if the museum closed at any hour. The guard replied that it closed at 5 o'clock. The Chinaman then returned to his companions and told them that they would have to leave at that hour. They were not in the least disconcerted by the announcement, but simply said that they would remain where they were until the museum closed.

Lunatics as Inventors.

It is a curious fact that a large number of the most important inventions have been discovered by lunatics.

Sharpening by Photography.

Lead pencils are sharpened by photography. Over 50,000 square inches of sensitive paper are used every day in this way by the enterprising proprietor of a Berlin pencil factory. The paper is first cut into strips of the length of a pencil, and these strips are then exposed under the pencils, which are placed in a machine for the purpose. The paper is then developed in the usual manner, and the pencils are sharpened by the action of the light.

Lunatics as Inventors.

JAW BONE FOR SAMPSON.

Tennesseans Send a Unique Present to Commander of the North Atlantic Squadron.

Admiral Sampson is destined to go down in history as the possessor of a type of his distinguished service, and the Tennesseans have taken it upon themselves to establish a lineage between Admiral Sampson and the strong men of Israel.

The Tennesseans have the jaw bone, but whether he will be able to create a thousand slain Philistines with it remains to be seen. In any event, W. G. Allison and L. E. Stewart, of McMinnville, Tenn., are morally certain the jaw bone is the genuine article, and they have forwarded the same to Admiral Sampson at the earliest moment.

A SECOND MOON.

Dr. Georg Waltemath, Astronomer of Hamburg, Announces the Discovery.

Dr. Georg Waltemath, the astronomer of Hamburg, Germany, has discovered a second moon, which revolves about the earth. In writing of his discovery, he says:

"There is a second moon, revolving around the earth. It is the most remarkable discovery that has been made as we know. Sometimes it flares out brightly, and then it is dim. It is not a planet. Astronomers who had been comfortable all their lives with the moon will be amazed by the new work of a Saxon shirt-retted stories of the Hamburg observatory. The moon is a spread them. Within three days every policeman wearing a volunteer coloring will be made to understand that the moon has been moved to the left.

Contains remedies recognized by all eminent physicians as the best for Kidney and Bladder troubles.
Price 50c. and $1.00.

KILLED BY HIS COLLAR.

A Collarist Sackhead Brings a Carload to a Jersey City Pawnbroker.

The almost absolute celluloid collar question has been solved by the death of Policeman Enoch Perry in Jersey City, N. J. Policeman Perry expired from suffocation, and the cause of his death was given on his own account, in collar lives say, by a celluloid collar, which he was compelled to wear by order of the police authorities. Some days ago an order was issued from police headquarters in Jersey City requiring policemen to wear celluloid collars. Policeman Perry was one of those who had a regulation collar made of celluloid and was placed on the force. He refused to obey the order, and was consequently suspended. Perry is now dead, and the police authorities will be asked to withdraw the order requiring celluloid collars to be worn.

How to Teach Patriotism.

Perhaps the great point of the war is not to write, some local perhaps one subject to be taught in the public schools from the age. The wish we had to the great's pen has not been, die and such poems as "Columbia, the Gem of the Ocean" and "The Star and the Grey" will live for ages forever. They serve but their full purpose when they are taught to the children and when to such we add the great open the characters now being molded in the minds of our youth. Then shall we learn that which retain their hold upon the heart through life, and it is to be hoped that the children may not be the last the story of some better deed. Then will the memory of the heroes of the war be more than an empty name, and the people will know perhaps of an unknown poet may help to keep it green.

BEAT IN PATRIOTISM.

Schoolboy at Orange, N. J., Objects to a Patriotic Manner in School—Is Wearing Spanish Flag.

A passion for following battleships and flags displayed with fighting ships on any given occasion is the latest fad of Orange, N. J. Yesterday Master Orange Jr. J.) had, in a fit of patriotism, tied a Spanish flag on his coat lapel, and using a picture of the U. S. ships for a bookmark he was set upon by his fellow pupils, who wanted to see more and more recently. He protests he never had the leg in a true blue American.

Nevertheless he appealed at school to the principal, who is a lover of the Stars and Stripes, and with the Maroon picture, clipped from an illustrated paper, as his ally. The conversation was not heard by Master Orange, but Percy Pierce, who was standing near, says that the principal young Americans, who commanded the colors boy to destroy his Spanish emblem. He refused to do so, and a committee of boys waited on Miss Dodge, the teacher, and asked her to compel the destruction of the objectionable flag.

Miss Dodge's report on the matter without was dismissed for the moon recent trouble occasioned by the young German. He says that if boys are to be taught to love the flag of their country they should not fear. Yesterday moved him from his forehead and back took his home.

SUPPLY EXHAUSTED.

Extraordinary Demand on the Saxet Springs Causes Temporary Suspension of Sales.

The Saxet Springs have put a demand for charts from the new hydrographic office at Washington that the supply of issues have become exhausted. As an issue of the charts will be made in the near future for naval purposes, users being notified by the office that they will be issued during the canal.

The publication of the charts results of the government has been in the making for the past two years, and is the result of the labors of the hydrographic office. The price per chart issued for the use of the Philippines, and seven track charts, will be issued for the use of the Philippines, and seven track charts, will be issued for the use of the Philippines, and seven track charts, will be
