THE COAL FIELDS OF ALASKA

ALFRED H. BROOKS

There are two known areas of high grade coal in the Territory of Alaska. The first is the great coal field of the Copper River valley, which extends for a distance of about 100 miles along the coast. The second is the great coal field of the Yukon valley, which extends for a distance of about 100 miles along the coast.

The coal fields of Alaska are of great importance to the Territory. They are the only source of coal in the Territory, and they are the only source of coal in the United States which is not imported from other countries.
