INTERCROPPING PRACTICED IN ORCHARDS

The orchard owner in more than one section of the province has been practicing the system of intercropping in his orchards. This system, which is practiced in the United States and Europe, involves the planting of different crops in the same orchard.

Where clean cultivation is the rule, the orchard owner has to contend with a host of weeds and grasses. Intercropping, however, allows the orchard owner to plant a variety of crops in the same orchard, which helps to suppress the weeds and grasses.

One of the main reasons for practicing intercropping is the fact that it helps to improve the soil. Different crops have different root systems, which help to break up the soil and improve its fertility.

Another reason for practicing intercropping is the fact that it helps to reduce the risk of crop failure. If one crop fails, the other crops in the orchard will still be able to produce a harvest.

Intercropping is also practiced in orchards because it helps to attract beneficial insects. Different crops attract different insects, which helps to control the population of pests in the orchard.

Intercropping is a system of agriculture that has been practiced for centuries. It is a system that is becoming more and more popular in the United States and Europe, and it is also being practiced in the province of Ontario.

HOW MRS. BEAN MET THE CRISIS

Carried Safely Through Change of Life by Lydia E. Pinkham's Vegetable Compound

My husband and I were married for twenty years. I had a very comfortable life, but one day I was suddenly struck by a crisis. I was unable to get on my feet, and I was in a great deal of pain.

I had heard of Lydia E. Pinkham's Vegetable Compound, and I decided to try it. I took it for a few days, and I was able to get on my feet. I was in a great deal of pain, but I was able to get on my feet.

RED SPIDERS HARM YOUR RASPBERRIES

ORCHARD CLEAN-UP VERY PROFITABLE

Flowers of Suburbs Recommended as Excellent Remedy for These Parasites

Manitowish County Agent Demonstrates What Can Be Done with Apple Trees

By J. W. GARDNER, County Agent

It is a well known fact that the red spider is one of the most destructive pests of the raspberry. It is a small, red, spider-like insect that feeds on the leaves of the raspberry, causing them to wither and die. The red spider is also a pest of the apple tree, and it is one of the most common pests of the apple tree in the province of Ontario.

The red spider is a very small insect, and it is very difficult to see. It is a small, red, spider-like insect that feeds on the leaves of the raspberry, causing them to wither and die.
