• • •

Naval Lieut. W. D. Thompson, twenty-five, was drowned in Jamaica bay, near New York, when the motor boat he was piloting became disabled in some manner and capsized.

• • •

Firing a revolver toward the altar as he stood with the congregation at the close of mass at the Immaculate Conception church in Jersey City, Father Thomas W. Shelley, self-confessed bootlegger, was arrested and charged with the death of Fr. James W. Markoe, personal secretary to the Bishop of Newark and a successor of the church. Shelley was not captured.

• • •

With an assessment of $700, the new Goodyear Industrial university, the school of all trades, was dedicated at Akron, O.

• • •

Donald L. Campbell, a fifteen-year-old Boy Scout of Bellevue, Ky., who has been awarded first prize in the scout national safety contest, received the last essay on the "Benefits of Electricity" at the Detroit Edison company. Two million school children participated in the contest.

• • •

Switchmen and yardmen and other employees of the Pennsylvania, the Reading and the Lehigh Valley & Pa. railroads in the Philadelphia district have voted to strike ordered to go into some work of arms.

SHAKESPEARE'S GREENWOOD.

Less than three hours' travel from dirty, busy London is the forest of Arden, which is believed in the minds of all who speak English to be the part that Shakespeare found in it the inspiration for his wonderful scenes, and especially for the flusteringly beautiful scene of "A Midsummer Night's Dream." The great oaks under which his fellows danced still stretch out their branches over the shadow-dappled ground.

Modern Humor Decadent.

An Englishman, writing of the decadent humor of the world today, has this to say: "A joke, to cause amusement he almost nothing, or one of the most subtle nature, must have lived to some five, or for which Cain killed Abel."

Which Annoys Jud.

Jud Tunkins says that as a rule he wouldn't object so much to seeing a man play a piano if he could keep from watching the expression of his face.

UNCLE SAM WILL BUILD 300 OF THESE

View of two of the latest types of destroyers being built at Newport News, Va. More than 300 of these "hornets" are provided for in the navy's shipbuilding program.

Hit Influenza at Its Source

Dr. Simon Flexner Proposes Combating Dread Disease at Its Origin.

EASTERN EUROPE PLAGUE SPOT

Many Recorded Epidemics Shown to Have Emanated From That Area —Disease Claims More Victims Than European War.

New York.—According to Dr. Simon Flexner, director of Laboratories of the Rockefeller Institute for Medical Research, further researches into the influenza epidemic can be prevented only by wiping out the disease at its source. In a recent address before the Congress of American Physicians and Surgeons, later published by the American Medical Association, he traced the path of the disease through six different areas.

"There are excellent reasons for regarding the endemic home of influenza to be Eastern Europe," he said, "and in particular the border regions between Russia and Turkestan. Many recorded epidemics have come from more or less closely to eastern Europe than any other region. Evidence of recent years has been traced from there to the present degree of conduciveness from this Eastern home, at intervals of two or three decades, a migrating epidemic influenza begins moving eastward and westward, with the greater velocity in the latter direction.

Uncanny in Action.

"In the rational sheerist there is something uncanny in the way influenza strikes down its victims. While other epidemics proceed from bad to worse, with at least progressive increases in intensity, influenza seems to overwhelm communities over night with its sterner stretches of territory as by a simple stupendous blow. While in the one case the gradually accelerating rate of spread of extension may be taken by the infinite personal conveyance of the prevailing micro-organism, in the other the sudden wide onset appears the long negative of personal communication.

"Hence the breeding of mysterious influences, the revival of the notion of miasmata and similar agencies, in accounting for this phenomenon. Indeed, the published records of influenza abound in such fatuous conveyance, for the reason the gradually accelerating rate of spread of extension may be taken by the infinite personal conveyance of the prevailing micro-organism. In the other the sudden wide onset appears the long negative of personal communication.

"Hence the breeding of mysterious influences, the revival of the notion of miasmata and similar agencies, in accounting for this phenomenon. Indeed, the published records of influenza abound in such fatuous conveyance, for the reason that no such fatuous conveyance, for the reason that no such fatuous conveyance, for the reason that the medical profession as a whole has never completely comprehended, and this is very far from being a matter of academic importance only, since in the end the successful imposition of a prophylactic depends upon correct appreciation; and until the majority of influenza epidemics are comprehended or brought to a fair level of understanding, there will be little if any improvement in the more general serious and sustained evidence there is warranted to be reported.

Using a Bugaboo.

"And yet no better instance of a scientific disease could possibly be found than influenza to exercise the force of the mysterious origin of epidemics. To dwell solely on the sudden and overwhelming stroke of the disease is wholly to overlook the fundamental scientific grounds for serious influenza, because they are of ordinary nature and so in all de-

NEW FLU SCOURGE IS FOUND

Children of Vienna Are Left Stupefied and Emaciated After Epidemic.

Washington.—A new form of encephalitis lethargica, marked by the signs of influenza and attacking the victims in the nature, is declared to have subsided toll among the children of Vienna, according to reports from Dr. Rolf of Zurich.

Two Belgian Women and Their Father Honored for War-Time Aid.

London.—Another June 3rd has been added to the Belgian honors. Miss Clement and her sister, Miss Marie Clement, and posthumously to their father, Theophile d'Ieve, for piloting to safety the Belgian general staff details of the first German gas mesh.

Paying is a preferential. M. d'Ieve

HAVOC IN STORM SWEPT DISTRICTS

THREE SOUTHERN STATES SUFFER 195 DEATHS—APPEAL FOR AID TO RED CROSS.

Property Damages May Exceed Two Million Dollars—Tornado in Sections of Ohio Is Paralyzed—Families Flee to Escape Rapid Rise of Water.

Western Newspaper Union News Service.

Birmingham, Ala.—Revised reports from storm areas in Alabama and Mississippi, Alabama and Tennessee placed the number of fatalities resulting from storms at 155. Later reports held of hundreds injured and estimated the property damage at more than $2,000,000. Appeals for aid have been received from many small towns and settlements and Red Cross relief stations were being organized at various points in every flood and tornado into the storm swept districts. The greatest havoc was wrought in Alabama, where in all, 107 persons were killed. Property damage there was in the thousands of dollars. Reports received from Northwestern Alabama, Eastern Mississippi and Northern Georgia indicate that the storm was spent.

Round-Up War Tax Delinquents.

Washington.—Despite the Government's liberal appeal for late payments as a patriotic duty, more than 100,000 persons individual failed to make honest returns under the revenue law of 1918, the Bureau of Internal Revenue announced in a monthly statement. It ended February 1, $10,051,000 in delinquent taxes was collected, the commissioner Williams reported. A new drive to collect delinquent taxes has been instituted to cover the tax period ending December 31, 1919, and the March 15 installment of 1920 taxes. Of the total delinquents 131,206 had not made returns, while 100,000 who returned 44,200 did not pay the full amount due. Of the latter 1,000 were from the two sources approximately 1,000 individuals failed to report said that 164,500 firms had not filed returns, and that 20,000 had delinquency taxes on sales and admissions, and 5,000 on capital stock taxes. Delinquent by a dose until.

To Avert Recurrences.

"It is distinctly to the interest of clear thinking, to carry this considerations of the early history of epidemic influenza a step further. A feature of the history of influenza of special significance is the tendency to recur in a series, or to strikes region after region at an interval, usually of months at relative regularity.

"Thus the beginning of the last pandemic flurry in the United States was from there traced to sporadic cases appearing at Fort Riley, Kan., and possibly even earlier in certain places in Europe. The progress was relatively slow during September, October and November of 1918. Then, in December, 1918, and into for letting that in itself in the lull of summer months. Against that is sinister character is given by the fact that the epidemic was then at its fullest. It is followed, under particular circumstances, by a recrudescence of epidemic pneumonic infection to which the attention of the world is now, and justly, so forcibly.

"The manner in which to fight disease of this nature is according to Dr. Flexner, one of two methods, one a peripheral control," that is, fighting the disease at the point of contact, and "stamping out the contagion against which it has spread to different parts of the world.

"According to this proposal, an effort at a control epidemic disease may be directed through successful, the insurance within fellow beings elsewhere. In attacking the source of the contagion was not put off until its epidemic spread had begun in Eastern territory, such as New Orleans, Jacksonville and Memphis, had been ended; but the attack was made on its source as it were, of the disease might be destroyed.

"What such an effort at the eradication of a serious epidemic disease may be attended through successfully, in experience with yellow fever abundantly proves. In attacking the source of the contagion was not put off until its epidemic spread had begun in Eastern territory, such as New Orleans, Jacksonville and Memphis, had been, in
