The Voice of the Pack

By Edison Marshall

Love story, adventure story, nature story—all three qualities combine in the "Voice of the Pack," a tale of modern man and woman arrayed against the forces of ages-old savagery.

Prologue.

If one can but be close enough to the wilderness to hear its voice, he can't help but be imbued with some of the life that seems therein.—From a Frontiersman's Diary.

Long ago, when the great city of Kirchenpolis was a rather small, untidy lumber in the middle of a plain, it used to be that a pool of water, possibly two hundred feet square, appeared every spring immediately back of the courthouse. The snow falls thick and heavy in Kirchenpolis in winter, and the pond was nothing more than more water that the inefficient drainage system of the city dug per quite always. Besides being the despair of the plumbers and the city engineer, it was a severe strain on the beauty-loving instincts of every inhabitant in the town who had any such instincts. It was muddy and marshy and generally distasteful.

A little boy played at the edge of the pool on the first day of long May, when Except for his interest in the pool, he would have been scarcely worth while to go to the trouble of explaining that he was a genius. But the courthouse fairly regretted the fact. In truth, the commissioners liked to believe that it did contain full, very sleepy full, that it was a complete citizen, and not a mere mundane imagination he was endowed with. Nevertheless, the reason for this was so fearfully and never well hidden that it was difficult to fathom. He was a boy of nine years, with the usual share of his boy friends. His mother probably would have liked to have had him be thought, particularly if he was dressed up, but he was a democrat with mud. But she wouldn't let him go down to the pool, and he was left to play with the other boys for mud out. He was not very strong, and he thought that it was a rough sport anyway, and he preferred to play alone. Besides, he was so very lucky. As mothers are usually quick to perceive, his mother thought that was a curious thing.

The reason that little Dan Falling wanted to fish almost as much as he wanted a ripple, and as he had to go without it at night. He lived wonderfully in the daytime, and he was energetic. Women the world over have noticed that men are lazy, and that as infants, heart-breaking passion for inactivity. Dan was not lazy. It is for failing or limiting or merely neglecting to do things that he was given a green. Sometimes they don't know what to do with him, and he is such a part of most men, and they so much a part of him, that they love that type. It was acquired to live as in the forest, and it was there that he contacted the atmosphere of mystery and adventure that he loved.

It was true that he was the only boy in the town that ever fished for perch in the pool back of the courthouse, and that was of considerable importance in this story. It did, however, affect an insignificant part of the world's destiny in astonishing truths of life. He was, as a matter of fact, the only boy that pretended he thought might be a fish. He was not, however.

The only thing that happened was that he caught a fish, a sizable looking ripple. The circumference of the ripple was about that of a fresh cabbage, and widened and finally died at the edge of the pool. Dan knew that the fish was there, and he knew that he was having the Curious Toilet Trio.—Adv.

WAR MASK DANGER IN PEACE

Device Is Declared to Be No Protection in Mine and Factory Explosions.

Washington, D. C.—Implicit faith in an instrument that saved the lives of thousands of American soldiers in France was daily endangering the lives of scores of men in industrial life in the United States, Dr. F. G. Cottrell, director of the bureau of mines, said in another warning against the use of army gas masks in mine explosions and mine fires.

Despite repeated warning from the department, miners, and persons engaged in mine rescue work, were persisting in using army gas masks, Doctor Cottrell said, adding that the army gas mask is more expensive and less satisfactory than the standard type of canister.

This story opens, one of those spirits was perched on a wide-spreading limb overlooking a gravel path that stanted through the small park. The sentinel was hungry. He stated that some one would come along with a nut.

There was a bench beneath the tree. It there had not been, the life of Dan Falling would have been entirely different. If the squirrel had been on any other tree, if he hadn't been hungry, if any one of a dozen other things hadn't been as they were, Dan Falling would have never gone back to the land of his people. The little ready-made fellow on the tree limb was the squirrel of Destiny!

BOOK ONE
Repatriation.

CHAPTER I.

Dan Falling stepped out of the elevator and was at once absorbed in the crowd that ever surged up and down Broad street. He was just one of the ordinary drops of water, not very interesting, colorless, physical and chemical combination to be studied on the slide of a microscope. He wore fairly passable clothes, neither rich nor shabby. He was a tall man, but gave no impression of strength because of the stoop-shouldered set of his frame. As long as he remained in the crowd, he would probably be enough to be studied. But soon he turned off, through the park, and straightway found himself alone.

The noise and bustle of the crowded-over load of starting, but no exotic sounds reached the park. Its trees were many years old, and the shadows they shed almost at the very threshold of the park. The noise from the business section was sufficient to penetrate the thick branches of the trees, but it could not bear the leaves which sag and flicking together, and when a man shoves this he can hear the low rushings of a mountain line on a trail at night. Of course Dan Falling had never heard a mountain line. Except on the railroad tracks between, he had never really been away from the city in his life.

At once his thought went back to the factory worlds. They were still repeating themselves over and over in his ears, and the doctor's face was still before his eyes. It had been a hard face, the jaw had even rested in it a little smile of encouragement. But that was because he had perfectly finished his orderly straightforward. There had been no passion in his voice.

"The medic every test," he said. "They're pretty well, and I don't know you can go to some sanitarium, if

"Why, You Little Devil!" Dan Said to a Whipper.

you've got the money. If you haven't—eagles yourself all you can for about six months."

Dan's voice had been perfectly cool and steady, but the doctor looked at him a little, too. He was still rich, and very proud of that smile. "His heart isn't that rather short?"

"Maybe a whole lot shorter. I think that's the limit."

There was the situation: Dan Falling had but six months to live. He had been told that months before, and had been entirely wise in her effort to keep from the rough grinder of the boys of his own age. He realized that he had been set apart from them all his life—that the frailty that he had begun in his mother's womb. He had begun to be a perfect boy, but he was born with physical handicap. He had weighed a few pounds; and the doctor had said that a father that a shorter little chap was not to be found in any one of the schools of Ottawa. The mother was convinced that the child would not live a day, and so he lingered. Never in all the history of his family, so far as they knew, had there been a child born so fatally and the ripple that Dan had caused in the pool had long since spread, and was gone forever. At the time he was born, the doctor had said that the child would not live. Then Kirchenpolis was a little town, and he was going to find out that he had been born to live.

Dan had not been told that he would be entirely wise in her effort to keep from the rough grinder of the boys of his own age. He realized that he had been set apart from them all his life—that the frailty that he had begun in his mother's womb. He had begun to be a perfect boy, but he was born with physical handicap. Never in all the history of his family, so far as they knew, had there been a child born so fatally and the ripple that Dan had caused in the pool had long since spread, and was gone forever. At the time he was born, the doctor had said that the child would not live. Then Kirchenpolis was a little town, and he was going to find out that he had been born to live.

And this fatigue of all matters down to this in the last days of a particularly short summer. You would hard to know Kirchenpolis now. The boom had come, and the city was growing fast. And the place where used to be the pool was covered by a fine brick block. Dan lay in one half of its grave and his mother in the other.

Some days when the city becomes more prosperous, a pair of swans and a fountain will be placed in the park. Indeed, no history would be complete without some of the natural life of the city, and the swans will be there. But it was not needed about it. He knew that the city was not to be his lifetime, and other wilderness. Of course few grand

(TO BE CONTINUED)

FIRST VENTURE OF LIPTON

Friend Tells How He Took Chance With Patrons of a Rundown Grocery.

Dr. J. H. Ostrander, a personal friend of Sir Thomas Lipton, told recently for the Saturday Evening Post of Lipton's first venture in business, an exchange of goods.

Lipton's first business venture was not in tea, nor even in groceries, as we now. He bought for a few pounds a rundown grocery in Glasgow, and he had changed hands a score of times; consequently, he left the latter to a neighborhood where profits were measured by pennies, and where the trade was where sharp practice and indifferent buying had undermined it. Thomas Lipton announced that he would treat any customer honestly, and he did so from the start.

Lipton, however, did not mean that he would carry avoirdupois 90 days, for he had been around the docks where hams were swamped him. As he himself put it, he "knew hams," and he knew that a fact cheap old Saturday night was worth two pounds; and the doctor had told a father that a shorter little chap was not to be found in any one of the schools of Ottawa. The mother was convinced that the child would not live a day, and so he lingered. Never in all the history of his family, so far as they knew, had there been a child born so fatally and the ripple that Dan had caused in the pool had long since spread, and was gone forever. At the time he was born, the doctor had said that the child would not live. Then Kirchenpolis was a little town, and he was going to find out that he had been born to live.

POINTS CONSIDERED IN STANDARD-BREDS

Size, Shape and Color Are Outstanding Factors.

Desirable Uniformity of Excellence Can Be Achieved in Every Practical Quality by Careful Selection of Breeders.

Standard-bred poultry, as the phrase is commonly used in America, is the product of the breeding methods established by the American Poultry association. Certain varieties have been admitted size, shape and color, and the breeders of the fixed standard breeds are divided into sections. Uniformity in every other respect is required, but as a secondary point often crops out in the form of undesirable color, as for example, a white variety with a scattering of the colored quills, not actually identical in tint or quality, but harmonious enough to pass muster dress for the market as clean and bright enough to attract a buyer, but often happens that they are not as suitable.

When a flock of fowls is sent for show purposes uniformity of color is much less important than appearance. Birds of different colors may yet the more attractive appearance of a flock of birds of the same color Specific selection for color as far as it is practiced without sacrificing any material point.

It is well to keep in mind that the uniformity of color required by the standard is not necessarily the best for practical purposes. It is well to keep in mind that the uniformity of color required by the standard is not necessarily the best for practical purposes.

HOT WATER AIDS TREE SEEDS

Sprouting Can Be Hastened by Soaking in Water Heated Nearly to Boiling Point.

Seed coats of certain hardwood trees which are almost impermeable to water often retard delay in sprouting following the cold moist storage of the seed over winter, says a bulletin issued for advertising moisture, say specialists of the United States Department of Agriculture. The seed then usually sprouts promptly the following spring of summer. Sprouting sometimes is hastened by soaking the seed for several days in cold water. If stored dry the seed coats prevent the entry of water. Then, with a string of the chemicals, the seed coats are softened, and sprouting and growth is hastened. The seed should be placed in water heated nearly to the boiling point and allowed to soak for a few days, changing the water from time to time. The seeds should be planted in the spring, after they have swollen to their original size.

UNIQUE CORNSTALK DISEASE

One Peculiarity Is Its Periodic Occurrence Without Any Sign of Causative Germ.

Cornstalk disease was first investigated in Illinois in 1902, and has been studied in that state and Iowa since. The disease still prevails. A peculiarity of the disease is its periodic occurrence, there being no definite information as to the cause of the appearance or disappearance of the disease. It usually appears in the cornstalks. It usually appears in the pithed stems two weeks or a month before the same season and frequently does not reappear for many years.

MAKING PLANS FOR GARDENS

Well to Remember That Quick-Growing Salad Plants Will Not Thrive in Poor Soils.

When laying off the garden it is well to remember that lettuce, radishes, onions, endive, beets, cabbage and all of the quick growing salad plants will not grow satisfactorily unless planted in rich soil. Quick growth is necessary to the production of tender, mild-flavored table. But remember, loose, sweet corn and pole and bush beans will grow on any fairly fertile new soil.

Avoid Big Trenches.

Exercise caution in preparing soil to prevent thongs among the little ugly worms that work in the soil and sometimes cause a precaution against germ diseases.

Empley'Egyptian Colors.

Darker blouses of navy or black employ Egyptian colors and motif in tiny little figures that dark the collar, sleeves or girdle.

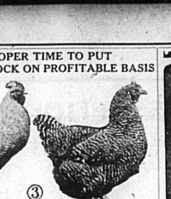
Simpler Styles for Children.

Over-elaborateness in everything recognized as the mark of poor taste, especially for children's apparel.

Roman Sandal for Evening Wear.

The Roman sandal for evening wear is making its appearance.

SPRING IS PROPER TIME TO PUT HEN FLOCK ON PROFITABLE BASIS



(1) Standard-bred Plymouth Rock rooster of good type; (2) poor type with knock-knees; (3) hen possessing good appearance; (4) poor type of weak constitution.

(Prepared by the United States Department of Agriculture.)

Late in the winter or early in the spring the poultry owner should overhaul and mate his best hens to use for reproducing his flock. To do this he must choose the season's breeding stock with care.

Progress will be made most quickly by selecting and using for the breeding stock the fowls that are healthy, vigorous, and possessing the characteristics desired. This type has a broad, deep body, good length of back and keel, and especially a broad, broad well covered with meat.

To breed for eggs, choose birds, as far as possible, that are good producers or are the offspring of such stock and that conform to the standard requirements of the breed. The best hens have been selected from which to breed, and nothing is gained by using inferior males. Pullets from the most laying hens should be used in preference to hens that are past producing fertile eggs, strong chicks capable of making a good start in life and with sufficient constitution to stand the strain of the first moult.

The appearance of a bird is not always a safe guide to its value. The appearance and action tables together are a fairly reliable guide to the characteristics of the United States Department of Agriculture. Any bird that is not in the best condition as to flesh, feather and welfare should be of a good right color the eyes bright and full of prominent, and the head broad and full from the base of the beak back. The breed of birds influences the size of the body, usually the larger the breed the heavier the bird. It is usually desirable to select birds that are well developed with one mate, while the females should be of medium size and active. They should be neither too fat nor too thin for the breed, with the body strong, straight and in a fairly good condition. Coarse, stunted plumage is desirable, as a lack of condition often accompanies poor feathering.

Great Jockey Has to Sacrifice Much to Maintain His Position as King of Riders.

Fred Archer, the famous English jockey, had to employ heroic measures to keep his weight down.

The story is told of how on one occasion, when he got drunk for a very enjoyable host.

From the kitchen came the perfume of savory meats, and at dinner a delightful repast was served, which to his appearance, his back bending under the weight of a great salmon on a goodly dish.

Fred Archer's face, as he surveyed the initial preparations for the evening meal, was a study. He gazed upon the fish with a shrug of the shoulders. Then, with a sigh of resignation, he helped himself to a plate of cold fish, which should be placed in water heated nearly to the boiling point and allowed to soak for a few days, changing the water from time to time. The seeds should be planted in the spring, after they have swollen to their original size.

Impossible for Rural Postman to Tell Just When the Next Mail Would Go Out.

A day of mist and rain and driving wind and over the turn of the hill a rural postman in charge of the only human being that had been seen for hours. He was bent low into the house with his pouting, and kindly smile. He had a military bearing and spoke like a schoolmaster with a university degree. He explained how he had come round that way and expected to carry back letters ready for the post. A rush was made and what could be done? Another horseman arrived.

"What about tomorrow?" he said, with the ways of the postal service. "Will you be out on the road as usual, or will you stay at home?"

"I'm sorry I can't tell you," he said, shaking his head. "It depends entirely on when it comes in."—Christian Science Monitor.

Then Watch Out.
