RURAL SCHOOL DEPARTMENT

Awards as indicated below, will be made to the schools preparing the best exhibits. The school exhibit will be scored by competent judges and awards made according to the score as arranged by them.

Each school desiring to make an exhibit should arrange with the Superintendent of this department to have space reserved for them. This space can be used by the school to include any local exhibit as they care to make. The major portion of the exhibit, however, should pertain to some form of school work or some activity in which the school is especially interested. Arrangement, neatness, material used and originality shown in the preparation of the exhibit will be considered by the judges in making the awards.

148. Best School Display $100.00
149. Best exhibit Rural School 75.00
150. Best Chorus 5.00
151. Best Duet 5.00

For Economical Transportation
CHEVROLET

Facts that prove the Value of The New CHEVROLET SIX

The new Chevrolet Six is shattering every previous record of Chevrolet success—not only because it provides the greatest value in Chevrolet history, but because it gives you more for the dollar than any other car in the world at or near its price! Facts tell the story! Modern features afford the proof! Read the adjoining column and you will know why over a MILLION careful buyers have chosen the Chevrolet Six in less than eight months. Then come in and get a ride in this sensational six-cylinder automobile—*which actually sells in the price range of the four!*

The COACH $595

The Roadster, $525 — The Sport Roadster, $595 — The Phaeton, $525 — The Sport Cabriolet, $595 — The Coupe, $595 — The Landau Sedan, $645 — The Convertible Cabriolet, $645 — The Sedan, $675 — The Landau Phaeton, $675

All prices f. o. b. factory, Flint, Michigan

Remarkable Six-Cylinder Engine
Chevrolet's remarkable six-cylinder engine impresses you most vividly by its economically smooth performance. At every speed you enjoy that silent, velvet-like flow of power which is characteristic of the truly fine automobile!

FISHER
Beautiful Fisher Bodies
With their low, graceful, sweeping lines and smart upholstery, their ample room for passengers and their sparkling color combinations and rich upholsteries—the new Fisher bodies on the Chevrolet Six represent one of Fisher's greatest achievements.

Outstanding Economy
The new Chevrolet Six is an unusually economical car to operate. Not only does it deliver better than *twenty miles to the gallon of gasoline*, but its oil economy is equal to, if not actually greater than, that of its famous four-cylinder predecessor.

Remarkable Dependability
In order to appreciate what outstanding value the Chevrolet Six represents, it is necessary to realize that it is built to the world's highest standards. Its design, its materials and its workmanship—it is every inch a quality car!

Amazing Low Prices
An achievement no less remarkable than the design and quality of the Chevrolet Six is the fact that it is sold at prices so amazingly low! Furthermore, Chevrolet delivered prices include the lowest handling and handling charges available.

Match Chevrolet Co.
Carlisle, Ky.
A SIX IN THE PRICE RANGE OF THE FOUR

INHUMAN METHODS

(Glasgow Times)

With forthcoming session of the Ky. Legislature would exert legislation forbidding cruel, inhuman methods prevailing in shipping of livestock to market by truck. Typical of the method employed, we saw heavily loaded truck driven to market more than one hour one of the hottest days of August, that brought blush of resentment to our cheek. Hogs, sheep, cattle were crowded against and upon one another; one calf was tied with head against the front standard. Sheep, almost dead from heat, panting for breath, were packed tight on the bottom. Above was another tier of animals just as badly treated. And this stock was driven to market more than one hour's good miles without water or attention or thought. Loss from maimed, dead and bruised animals ought to teach those in the business humane methods because they cannot protest, should be treated thus. It is not in the scheme of things. And he who makes it necessary for it should be severely punished. If not now, then hereafter.

Fires caused by spontaneous combustion cost this country $20,000,000 every year.

SQUEEZING OUT SOME WATER

(Cynthiana Democrat)

The Federal Power Commission at Washington by a ruling is trying to squeeze water out of the capitalization of public utility organizations. The ruling was in the case of the Cumberland Hydro-Electric Co., especially, an Insull Middle West Utilities Co. subsidiary, which is endeavoring to secure the right to harness Cumberland Falls, ably seconded, by the way, by the Governor of Kentucky.

The ruling strikes $500,000 from the proposed capital account of the Cumberland Co., $250,000 of it entered as future payments, and there is opposition of the State of Kentucky to create a State park at the Falls; $250,000 to pay for option, engineering reports; for license and rights, which the Federal Commission says, should not cost over $40,000. This sum of $500,000 is "water." Its addition to the capital stock to be issued against it, not a tangible asset, and sold to the public, bearing interest. This interest must be paid by somebody, and there is no power to pay it except the consumers of electric power. Thus the price of electricity must be fixed at a figure to include interest on the water.

So, the $250,000 which the Cumberland Falls organization proposes to "present" to the State of Kentucky for park purposes is taken out of the pockets of people who use electric power. A part of the people pay for this "present" to the whole people. It is no more a "present" than "free" school books would be.

The other $250,000, which the Federal Power Commission would not be stricken from the capital organization, is estimated to be $100,000 more than the cost of dams, power site, etc., and also is "water" on which electricity consumers must pay interest.

The Federal Power Commission proposes to limit the amount of all capital organizations—that is not permitting $100,000 for the final year, ending June 30, 1929; but it had swollen to 2.5 per cent in the motor vehicle department an each intervening year showed an increased percentage of collections going for accounting expenses.

Salaries constituted 40 per cent of the departmental expenses the first of the years; they constituted 60 per cent the last year, and every succeeding year between salaries constituted a larger and larger proportion of the total expenses, with the exception of the last, when salaries increased and other expenses were slightly reduced.

If it were possible to believe that an underpaid force had so improved its efficiency as to deserve better pay, no one would object even to a 223 per cent jump in the payroll, though the payroll, as the report reveals, jumped 60 per cent the second year; 18 per cent the next, 35 per cent the next and 26 per cent the next, and a bookkeeping expense of 1 per cent was increased to start with. But it is doubtful whether the salary scale in the department is much, if any, higher than it was in 1924. The force has been increased. During each session of the Legislature, members of legislators wives, children and other relatives are appointed on that pay-roll—always relatives of legislators who voted with the administration. Criticisms also have been made by former Inspectors and Examiners that the Tax Commission was using this department to pad its own budget. Complaint was made to the motor vehicle department and paid out of the road fund, how much was spent for work for the Tax Commission. That the Legislature adopted a budget for the Tax Commission a budget, recommended by its own chairman, who was a member of the Budget Commission. A liberal allowance was made for the maintenance of the motor vehicle department out of the road fund to enable it to handle the Tax Commission has the right to take from the road fund any sum to increase its own budget beyond the sum fixed by the Legislature.

The Legislature should inquire into the motor vehicle department; budget and provide a specific amount, just sufficient for its needs, instead of a maximum of 50 cents for each license the County Clerks issue.

HINTS TO FARMERS

The careful livestock feeder watches each animal and feeds according to the animal's needs. Many farm animals are underfed and can not produce a profit on the feed they get.

Sweet-clover pasture provided for winter use will keep best if stored in bins made of one part of salt to three parts of water, says the Bureau of Dairy Industry, U. S. Department of Agriculture. Butter stored by the bureau in dry salt and paraffin deteriorated on the surface. Be sure to use enough salt in the brine, wrap the butter in parchment-lined paper, and see that the rolls are entirely submerged in the brine.

A common mistake in the management of sweet clover is to pasture it first-year stand too heavily. New seedings should always be pastured lightly to mature annual two to secure the rate of growing may be heavier than this in August, but by September 15 the rate should be decreased, to allow the plants to store food in the roots. Such plant should go into the winter with at least 6 inches of top growth. Sweet clover pastured too heavily the first year will start slowly and grow unevenly the second year, and will yield considerably less forage than if pastured lightly the first year.

August is a good time to dig sheep for ticks. The dipping solution should be about 24 days apart; the first dipping may not destroy all the eggs and there may later hatch a new brood. Various kinds of dips are satisfactory. Coal-tar-creosote, cresol, and nicotine dips may be bought ready prepared. Sheep dips are most effective when used with soft water. If necessary to use hard water, the water may be "broken" by adding sal soda at the rate of from 2 to 4 pounds for each 100 gallons of water. The sheep tick—which is not a true tick but a bloodsucking parasite—is very prevalent and spreads rapidly, especially among close-herded range flocks. It is best for a whole community to dip all sheep about the same time to prevent spread of ticks from flock to flock.

UNION RULES

They were court-martialing the soldier for desertion, and the case looked very bad. In response to a question for acting for the defense arose Wee Willie Isaacs, addressing the court: "I admit appearances are against this man, but I suppose to you in civil life he was a plumber—and he was only going back for his bayonet."

A PAYROLL UP 223 PER CENT

(Courier-Journal)

The State Inspector and Examiner produces some astonishing figures on the motor vehicle department of the State Tax Commission, which was rant a more extended inquiry. His report for the six years, ending June 30, shows an increase of 56 per cent in motor license revenues, 124 per cent in expenses of the department and 223 per cent in its payroll.

The ratio of increase looks bad on the face of the report, but it is worse than it looks. Were there any relation between gross collections of motor license fees and the expenses of the department, the disproportion between the gain in revenues and cost of collection would demand an explanation. A private business enterprise might justify an enlarging overhead by growth in the volume of trade and savings of quantity production; but the motor vehicle department employs no clerical, not a sales, force. Increases in revenue are due to the normal increase in the number of motor vehicles and a change in the license rate. This department doesn't even collect the licenses. The County Clerks do that, for which they get paid a fee by motorists. The motor vehicle department at Frankfort furnishes supplies, receives the collections from the clerks, keeps a record of licenses issued, and later remits the collections to the State Auditor. It corresponds in a general way to a central accounting office for 120 branch agencies, the overhead cost of which should bear a constantly diminishing ratio to the volume of receipts as the latter increased. For instance, if a concern took in $3,184,286.51, as the motor vehicle department did for the fiscal year, ending June 30, 1928, and the payroll for accounting assumed to a fraction over 1 per cent, it would expect the percentage of accounting expense to be less on collections of $4,-969,010.79 for the fiscal year, ending June 30, 1929; but it had swollen to 2.5 per cent in the motor vehicle department an each intervening year showed an increased percentage of collections going for accounting expenses.

Salaries constituted 40 per cent of the departmental expenses the first of the years; they constituted 60 per cent the last year, and every succeeding year between salaries constituted a larger and larger proportion of the total expenses, with the exception of the last, when salaries increased and other expenses were slightly reduced.

If it were possible to believe that an underpaid force had so improved its efficiency as to deserve better pay, no one would object even to a 223 per cent jump in the payroll, though the payroll, as the report reveals, jumped 60 per cent the second year; 18 per cent the next, 35 per cent the next and 26 per cent the next, and a bookkeeping expense of 1 per cent was increased to start with. But it is doubtful whether the salary scale in the department is much, if any, higher than it was in 1924. The force has been increased.
