Lawn Needs Spring Tonic To Help Overcome Weeds

A good way to fight weeds in the lawn is to feed them. This is the seemingly paradoxical advice of turf specialists of the United States Department of Agriculture. Feeding the weeds gets results, the experts say, because the fertilizer that feeds the weeds also feeds the grass and stimulates such vigorous growth that the grass, which thrives with frequent cutting, will run down the objectionable weeds.

For lawn fertilizer, the specialists say, it is hard to beat well-rotted manure. For the spring dressing it is a good plan to compost manure with leaf mold and sod or other vegetable wastes, and then sift in with a coarse screen to remove lumps and bunches. A top dressing is a spring tonic for a lawn. In the fall it is not so necessary to compost manure or to remove lumps and undecayed matter.

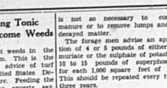
The forage men advise an application of 4 or 5 pounds of either the muriate or the sulphate of potash and 10 to 15 pounds of superphosphate for each 1,000 square feet of lawn. This should be repeated every two or three years.

A good nitrogen fertilizer for early spring is composed of cottonseed meal an dother nitrate of soda or sulphate of ammonia. Use 4 or 5 pounds of the meal to each pound of the concentrated fertilizer, and scatter the mixture over the lawn at the rate of about 15 to 20 pounds to each 1,000 square feet.

NO MAN CAN DO BETTER

She—Will you always love me like you do now?

He—Well, I'm bound to get old, but I'll do my best.



The Friendly Five Shoe

A Big Five Dollar's Worth

Friendly Five Shoes gained over three-quarters of a million dollars in 1930 sales over 1929. That is a truly remarkable record and proves that the public realizes that in this shoe is to be found a big five dollar's worth.

Men's Oxfords at $2.95 and $3.95
Youths', Boys' Oxfords at $1.95
Men's Work Shoes $1.59 to $4

SEE OUR WINDOW

R. T. KIRKLAND & COMPANY

KURFEES

60 and 20 100%
Lead Zinc PURE

Contains 80% pure Carbonate Lead and 20% pure Zinc Oxide. It's tinted with pure colors, ground and mixed with pure Linseed Oil and dryer. And that's all! You'll never find Silica, Whiting, Barytes—in fact, any "extenders" fillers—in Kurfees Paint!

Your entire way of selecting good paint is by comparing formulas! Do it before you buy—and get the best "surface-covering" and wearing paint at no additional cost!

KURFEES PAINT		OTHER PAINTS	
60 & 20 100% Pure		Carbonate Lead	....%
CARBONATE LEAD 80% (Highest quality lead that is made.)		Zinc Oxide	....%
ZINC OXIDE 20% (Costs less than carbonate lead, but Kurfees uses only 20%, just enough to prevent chalking.)		Lead Sulphate	....%
		Silica	....%
LEAD SULPHATE None (Costs less than carbonate lead.)		Barytes	....%
SILICA, BARYTES, WHITING, these three can be bought for about 2½ c lb.	None	Whiting	....%

Don't be fooled by a high per cent of Zinc, as this costs less than the pure Carbonate Lead, and while a paint manufacturer will give some plausible excuse for it, the fact is that it helps to reduce the cost of his paint.

Compare values, and YOU TOO will use

Kurfees Paint
80 and 20 Percent Pure

CORRESPONDENCE

BUFFALO TRACE

(Lillie Gaunce, Correspondent)

Mr. and Mrs. Clyde Snapp and family, of near Headquarters, spent Saturday and Sunday with Mr. and Mrs. George Gaunce, of near this place.

Mrs. Mollie Rice has returned from a visit with her three sons in Covington. Stanley Rice accompanied her home for a week's visit.

Robert Freback, of Lexington, spent several hours with his grandmother, Mrs. Mirah Freback.

Mr. and Mrs. Sidney Bow and family, of Paris, spent Sunday with his parents, Mr. and Mrs. John Bowe of Buffalo Trace.

Mr. and Mrs. Thomas Gaunce and baby, of Sailwell, spent Sunday with Mr. and Mrs. Walker Gaunce, of near this place.

Mr. and Mrs. Bunn Snapp and son, of Barterville, spent Sunday with Mr. and Mrs. Gilbert Gaunce.

Mr. and Mrs. Calvert Busby and family and Mr. and Mrs. Sam Jones, all of Sailwell, spent Sunday with Mr. and Mrs. Charlie Jones and family, of near Hooktown.

Mr. and Mrs. Jessie Alexander, of near Carlisle, spent Sunday with her parents, Mr. and Mrs. C. C. Allen, near Sailwell.

MT. CARMEL

(Ethel Caswell, Correspondent)

Mr. and Mrs. Mike Heflin spent Sunday with Martin Heflin and family.

Mr. and Mrs. George Kokendoffer visited Mr. and Mrs. Holt Shaw.

Will Caswell had for his Sunday guests, Mr. and Mrs. Stanley Freback and son, Mrs. G. M. Jones, Urban Freback, Misses Carrie and Lillian Hill, Ora Caswell and son and Mr. and Mrs. Charlie Freback and two sons.

Miss Betty Sparks sold last week four dozen frying chickens at eighty cents per head.

Will Caswell and daughter spent one day the past week with Mrs. Anna Mae Freback.

Robert Shaw and wife spent Saturday night with Mr. and Mrs. John Pyrtle.

Mrs. Frank Snapp is convalescing from an attack of measles.

PARKS

The following relatives and friends gathered at the home of Hermie and Leslie Banta Sunday with a well filled basket and surprised Hermie, the occasion being his thirty-fourth birthday anniversary: Mr. and Mrs. J. L. Banta, Bill Banta, Dawson, Frances, Jimmie and Joe Banta, Mrs. Rennie Banta, Lexington; Mrs. Maude Hardwick, Miss Christine Hardwick, Mr. and Mrs. Harvey Hardwick, Mr. and Mrs. Earl Hardwick, Wayne, Mac, Tommie and Thomas Hardwick, Mrs. J. T. Hardwick, Mr. and Mrs. Lee Hardwick, Mr. and Mrs. Lizzie Hardwick, Mr. and Mrs. A. P. McLean, Imogene, Jack and Avery McLean, Virgil Gross and wife and little daughter, Raymond, Ernest and Vernon Graves and Shirley Smith. Quite a number of other friends and neighbors called during the day. All left wishing him many happy birthdays.

Mr. and Mrs. Willie Yather and two sons spent Sunday with Mrs. Eula Hildreth and family.

Mrs. Maude Hardwick, Miss Christine Hardwick and Shirley Smith were week end guests of Mr. and Mrs. Ellis Hardwick and family.

Mr. and Mrs. Omer Workmon and Mrs. Omer Thompson were Sunday guests of Mr. and Mrs. John Bowe, Crackers and Mr. and Mrs. Enoch Thompson.

Mrs. Palmer Towles and daughter were guests of Mrs. Walter Bell Saturday.

We are all glad to know that Price Bell is some better at this writing.

SOUTH GRAVES

(Mrs. J. P. Minton, Correspondent)

Mrs. Shirley Marshall spent Wednesday with Mrs. Bina Rudd and Bessie Reed.

Mr. and Mrs. Frazier Bickhe spent one day the past week with Mr. and Mrs. Ben Hollar.

Leonard Patton spent the week end in Columbus, Ohio.

Mr. and Mrs. Tom Bowe spent Sunday with James Minton and family.

Mrs. Sallie Bowen and Miss Julie Hill spent Sunday with Mrs. Bessie Walton.

Mrs. Clarence McCarty and children spent Friday with her sister, Mrs. Katie Sapp.

Margie Campbell spent the week end with Pauline McCarty.

Mrs. Cecil Marshall spent Sunday with her mother, Mrs. Alice McCarty.

Mrs. Anna Kate Woodall spent Sunday with Mrs. C. L. Tapp.

LITTLE ROCK

(Mrs. Henry Sexton, Correspondent)

Mr. and Mrs. Cashy Cartmill and family and Mrs. Lillian Gaunce and baby spent Sunday with Roy Sexton and wife. Mrs. Sexton is improving nicely.

Mr. and Mrs. Henry Sexton and little son Ivan, and Spencer Gaunce and son, Chester, spent Sunday with George Sexton and family.

Mr. and Mrs. Carl Gaunce and family spent Sunday with Lora Sexton and family.

Better Sales And Profits Position 1930 Than 1921

Despite the fact that business failures in 1930 broke all records in both numbers and liabilities, the large representative corporations in principal industries showed much stronger operating positions at the close of 1930 than in the depression of 1921, according to comparative studies announced today by Ernst & Ernst, accountants, covering leading corporations classified by 20 industrial lines. For the period of 1930, as compared with the previous big depression period of 1921, it is shown that in the aggregate the larger representative corporations had higher profit margins and also larger sales in relation to inventories, smaller inventories in relation to net plant investment, larger sales in relation to net plant investment and larger profits in relation to capital investment.

All of these are favorable factors and serve to suggest that management of the larger companies has improved materially in the past ten years. The study also shows conclusively as to whether plants of the larger corporations are as much over-expanded as is generally assumed. Certainly these plants are better prepared as regards profits, sales and inventories than ten years ago. A previous study by Ernst & Ernst announced two weeks ago showed that corporations generally are in relatively more liquid position with less per cent reserves and lower current liabilities at the end of 1930 than at the end of 1921, thus suggesting that in the corporation credit situation is not unfavorable.

As regards net profits in relation to sales, as a result of the 1920 profits of 5.70 per cent, a smaller decline than in the earlier depression, and a higher level at the end of the year 1930" than existed at the end of the "good year 1920."

Sales were 4.24 times inventories in 1920, and 4.14 times in 1921, whereas they were 5.24 times in 1929 and 5.21 times in 1930, thus showing a smaller decline from 1929 to 1930 than from 1920 to 1921, and a higher level in the later period.

Inventories were 41 per cent as much as net plant investment at the end of 1921, but only 33 per cent at the end of 1930. That this improvement is due to relatively lower inventories rather than to higher plant investment seems to be indicated by figures on sales, which were 139 times net plant investment in 1921 and 158 times in 1930.

Net profits were 1.20 per cent of capital investment in 1921, but rose to 6.49 per cent in 1930.

Studies based on operating results of corporations are necessarily incomplete upon a smaller number of companies than studies of financial statistics, since many companies which publish balance sheets do not publish sales figures. Ernst & Ernst studies covers 120 companies reporting sales and inventories, and 42 of the most large, widely known and representative companies in their respective lines.

The study should be considered as applying to leading industries, therefore, rather than to industry as a whole. The analysis covers the operations as related to net plant investment, inventories to net plant investment and net profits to relation to capital investment.

The 20 lines classified in the analysis are: Automobiles, auto parts, beverages and confection, building materials, chemicals, coal mining, food products, iron and steel machinery and tools, merchandising, metal products, mining and quarrying, petroleum refining, paper and paper products, railroad equipment, rubber products, tobacco, wearing apparel, and miscellaneous industries.

Government Fights To Stay Cornborer Invasion

The United States Department of Agriculture has three of men at work in Hardin county, Kentucky, cleaning up evidences of the European corn borer and thereby preventing the spread of the pest.

Truth Tractors a re being used to pull wide berths to be bury the stalks and other debris that may harbor the insects. Fire and lye will be used to kill all materials burned.

A salem n. Ford Pr.f. W. A. Price, state entomologist at the Experiment Station, says this the University of Kentucky's first actual field test in fight the pest, aided by the Federal government. Jack Beckham in an effort to bury the Ohio river flood, stronghold of the insects, barricades were placed at bridges and ferries to check the spread of the pest.

Corn borer infested areas in Kentucky, Prof. Price believes, that it can be controlled by rely principally on publicity and cooperation of farmers and lastly and cooperation of farmers and the borer north of the Ohio river. He has appealed to the Ohio river. He has appealed to farmers not to buy corn from infested regions unless it is shelled. Infested corn should have husks and stalks burned and all materials bound.

THE GARDEN

THE ROOT VEGETABLES

(By John S. Gardner, Kentucky College of Agriculture)

The root vegetables are too often overlooked. True, there is nothing wrong about them, but they are valuable, if for no other reason, in that they usually stored, to furnish "fresh" food during the winter.

Soil

The nature of the soil is critical. It should have been so managed that it is capable of holding moisture. The best means for assuring this condition is to add humus in some form. The most obvious way is to use manure, but manure has its drawbacks, noted fresh. To begin with, there is usually too much nitrogen or ammonia causing root vegetables to grow to top. Too, the coarse bedding in unrotted manure may cause distorted, split roots with too much side growth. The manure used for the root vegetables should be fine and well rotted, or better still, it should have been applied the previous year, as for instance, on the cabbage or the celery portion of the garden, the manure withheld to the last and the root vegetables occupy the ground. Additional humus can be had by applying it in the form of a complete fertilizer. Although a formula high in potash would be best to use, a general formula, 4-12-4, will do fairly well. The way to use it is to sow it broadcast over the area to be spaded down the row, at the rate of 4 to 5 pounds to 25 feet, working it in with a rake or with a spading fork. The surface should be made fine and the seed sown.

Seed Sowing

The depth of seed sowing depends on the size of the seed. Parsnip and carrot, salsify and turnip seed should be covered no deeper than ¼ inch, while beet seed may be sown ½ inch deep. Parsnips and carrots are slow to germinate, but the seed may be marked by sowing a small proportion of radish seed with them. The radishes and the others in breaking through, and if a "mature" type is chosen, they will not in any wise compete with them.

Cultivation

The root crops, as a rule will not bear cultivation close to the row. Deep stirring should not be given, either, in at least an inch of the row. Such weeds that do start in the row can be removed if taken in time, with a hardware blade trimmer. Thinning may be done at the same time. The stand of parsnips, salsify and beets should be 2 inches, that for carrots and turnips 1", inches.

Pests

Turnips sometimes suffer from cutworms, easily dusted over the control is tobacco extract spray. The flea beetles occasionally attack the seedlings. Applying Bordeaux mixture is the control. If arsenate of lead is added to the Bordeaux at the rate of 1 tablespoonful to the gallon, the combined spray will check the cabbage worms that sometimes invade turnip plantings.

Beets, parsnips, carrots and salsify are usually free from insect pests, but salsify sometimes suffers from a black blight. Although close cultivation may be a contributory cause, the trouble may be due to disease, particularly in moist, muggy seasons. It is well to anticipate its coming by spraying with Bordeaux mixture. Two sprayings, the first when the seedlings are about 5 inches tall, and another 2 weeks later, will usually control most of the trouble.

Varieties

The best Kentucky varieties are: Parsnips, Guernsey; salsify, Sandwich Island; beets, Crosby's Egyptian; carrots, Chantenay; and turnips, Purple Top Strapleaved, and the new Louisrestant (which really is loune restant).

Domestic, Apartment House and Commercial Refrigerator — Electric Water Coolers

A SOUND INVESTMENT

Real estate has always been and yet so today the highest type of sound investment. Its great safety lies in the fact that its values fluctuate less suddenly and violently than other properties. But even these are subject to periodic readjustment without danger of loss.

Before purchasing, a full analysis should be made, however, as to the amount of taxes and insurance on property, its condition as regards repairs and upkeep, and the probable trend of values so as to reach a correct estimate of its worth. We are able to give you this service.

SNAPP & MULLIKIN, REALTORS

50th ANNIVERSARY

"Take It on My Word!"

"I've handled various poultry feeds, but I tell you, nothing has won so many warm friends among my customers as Tuxedo Starting and Growing Allmash.

"This high-quality product surely does reduce the mortality, and make big, husky cockerels and pullets in a hurry! I sell more, and more of it each year. It's specially designed for this part of the country, too. And you'll be surprised at its moderate cost.

"Contains grains, buttermilk, pure cane molasses and Cod Liver Oil. Cod Liver Oil, you know, is the 'bottled sunlight' which prevents leg weakness, reduces mortality, and makes stronger and healthier chicks. And the Vitamin A in the Cod Liver Oil is stabilized by Early & Daniel's exclusive process!"

INSIDE INFORMATION

Pongee silk will not spot if ironed when dry.

Unbleached sheeting makes excellent slip-on covers for mattresses.

Sew up the buttonholes before you wash a sweater. Then they won't stretch.

In washing sheer window curtains in a machine inclose them in a net or muslin bag.

To make Russian dressing, add tomato chili sauce or tomato catsup and lemon juice, to plain mayonnaise dressing.

Waffles served with crushed strawberries make a good dessert for the children's party. Add cream if you like, plain or whipped. Sweeten the batter a little more than usual.

Bananas may be fed raw to children as young as two years old provided the fruit is scraped fine, which is indicated by black seed, mealy pulp, and a brown spotted skin. Bananas less ripe may be served baked.

If you are planning or equipping a kitchen, think all the time of the work to be done in it. Don't make the room too big. Work centers can be arranged to better advantage in an oblong kitchen than in a square one.

The District of Columbia court of appeals Monday affirmed a sentence of one year in prison and a fine of $100,000 imposed on Albert B. Fall, former Secretary of the Interior, in connection with the taking of a bribe for naval oil leases.

To make mushroom sauce for steak, wash a pound of fresh mushrooms, separate the caps from the stems, trim the stems, and cut into pieces. Cook in 2 tablespoons of butter in a covered pan five to ten minutes at moderate heat. Season and serve with steak. Canned mushrooms may be used.

Acquaint yourself with the various sizes of canned and package goods to know how many servings each will give. Get into the habit of looking for the weight on a box of cereal or other goods, or the number of fluid ounces in bottled goods. Compare the size and cost in order to see which gives the best value.

Do you know poke shoots? They grow wild in many localities. The young, tender shoots and tips of the more mature stalks are excellent as greens. Because of the slightly bitter taste, the first water in which they have been cooked should be thrown away after the poke shoots have boiled 5 or 6 minutes. Do not overcook them. Serve in any way asparagus is served.

Make a rhubarb betty for dessert and as you would make apple betty. Alternate buttered bread crumbs and cooked fruit. Cover the dish with an egg custard, for it will not be necessary to cover the baking dish for the first part of the cooking. Use a meringue for a lid and brown the top crumbs. Sift a little cinnamon or nutmeg over the top.

An oblong kitchen is considered preferable to a square one for saving space and convenience. Reduction in the necessary walking about. On the other hand, a square kitchen may also be grouped most of the large equipment in logical working sequence. The test for waste space in a floor plan is merely whether the equipment can be packed into a smaller well-lighted area in the same relative positions, leaving room enough to work comfortably.

Have many Saturday or week-end picnics this spring if you own a car. Take the whole family along. Keep a special box or picnic kit equipped with paper or unbreakable plates, cups, silver, paper napkins, and waxed paper. Then a lunch can be picked up in no time at all and put together after the picnic spot is reached. On your emergency shelf in the pantry keep a few things always in stock, such as canned or package goods suitable for these trips.

Either parachloronbenzene or naphthalene flakes is effective in preventing the stored clothing against moth damage, if the clothing is first thoroughly cleaned by brushing and beating, and sunned if possible. The articles to be stored must be wrapped in tight bundles in paper, with the ends securely sealed so no moths can enter, or stored in tight boxes or trunks, with the flakes scattered through the container. Placing these substances in bureau drawers or on shelves does no good, because the fumes, which kill the moth larvae, are not confined.

Use French dressing with springtime salads, and choose combinations of ingredients that will be refreshing to the eye as well as to the palate. Duck green with the lighter green of lettuce can be obtained with cress or rings of green pepper; pale green from crisp sliced cucumber, endive, or shredded cabbage; bright red from tomato, radishes, pimiento, or pickled beet. Pile the salad lightly in individual plates, with something from each color group, and pass crisp crackers, cheese straws, or bread sticks.

CHICKENS EAT WELL AND THRIVE

Chickens Choose Food By Sight And Not By Taste

That chickens select the food they eat by sight instead of by taste is indicated by the following tests.

White Wyandotte pullets were permitted to have free access to corn feed meal, ground rye ground yellow and plain ground rye. The pullets ate 2.5 ounces each of the corn feed meal and yellow ground rye but only 1.75 ounces of the plain ground rye.

In another test when the birds were given free access to yellow ground rye and plain ground rye, they ate 2.22 ounces yellow ground rye and only 1.5 ounces of the plain ground rye.

In the last experiment the birds were given free access to corn feed meal and ground rye. This time the birds were colored black. Six and one half ounces of the black corn feed meal and 6.4 ounces of the black ground rye were consumed.

The mixing of red pepper with chicken feed did not prevent the birds from eating the meal readily.

Corn feed meal mixed heavily with salt was eaten as readily as salt free meal.

These tests indicate that chickens prefer corn feed meal to ground rye. When the ground rye was colored to resemble corn meal, nearly the same quantity was eaten.

These experiments indicate that chickens select their food by sight instead of by taste.

These tests were made in the Biological Laboratories of The Early & Daniel Company, Cincinnati, millers of Tuxedo Feeds.

"OUR OPPORTUNITY"

(State Board of Health)

No doubt you have heard it said that the battle against tuberculosis is being won. Some statements to that effect are made rafe from the disease in our country is only half what it was but two decades ago. Tuberculosis, though declining, is still the chief cause of death among people from twenty to forty years old. Tuberculosis takes its greatest toll among young adults, men and women just becoming self-supporting or just having reached maturity. Each year baby child who lives in close contact with a person actively ill with the disease is in great danger of becoming sick and an older degree is also infected. Other children may become infected to a lesser degree by dust, food or any thing contaminated with tuberculous sputum. But happily, infection does not necessarily mean disease. It is important that you understand this. How the child lives during the teen age years determines the outcome of his body's battle with the germs of tuberculosis. The person may develop if he is careless or as we often say, burns the candle at both ends. Such a school child and young adult, he lives the healthy life, his body resists the infection and no ill results from it.

In the teens, then, lies our golden opportunity to control tuberculosis. It is then that the disease from the disease among the fathers and mothers of the future may be prevented. At the very foundation of all prevention is the periodic health examination. Tuberculosis infection usually produces no signs of illness which the person recognizes until it has reached an advanced stage.

The only way it can be detected early—and disease prevented—is by periodic health examination. Then we must guard the health of our children. Older girls and boys especially are likely to undermine their vitality by too strenuous exercise, improper or insufficient food, late study and lack of sleep, and other unwholesome habits. We, the parents of today's school children, can do much, not to implant the fear of tuberculosis in them, but to encourage them to live the healthy life. Above all, let us set a good example.

The Kentucky Tuberculosis Association will all the year round, slowly but surely, be waging an intensive educational campaign against tuberculosis and their every thinking person join in this fight against this enemy of childhood and youth.

BOYS WILL BE BOISTEROUS!

She—Don't you love me any more?

He—Why of course, honey.

She—But I haven't had to slap your face in a week!

Clever Animals—Those Spiders

Mistress—Mary, what's the reason for those cobwebs on the ceiling?

Servant—I dunno, mum. I guess there must be spiders in the house.

HINTS TO FARMERS

Turning cattle or sheep on clover pasture when they are very hungry may cause them to bloat, especially when the clover is young and succulent or wet.

Everbearing strawberries are especially suitable for the home garden. The plants are very hardy, their foliage is resistant to disease, and under favorable conditions they produce better berries until hard frosts occur in the fall.

Unsightly or old buildings on the farm may sometimes be covered in a single season and made attractive by planting Kudzu vine, scarlet runner bean, or other vigorous-growing perennials is excellent for covering fences or other low objects.

Do not plant potato "runts" for seed, says the U. S. Department of Agriculture. Tests show that potatoes less than 1 ounce in weight do not give as large a yield as those weighing from 2 to 5 ounces, even if the latter are buttered or quartered and the former planted whole.

It is inadvisable to breed a sow to farrow in the fall after she weans her first litter in the spring. She should have all the time between weaning the spring litter and being bred in the fall for growth and development. Then, as a two-year-old, two litters a year may be produced.

To prevent objectionable odors and flavors in milk, if high-flavored feeds are given, feed just after milking, keep the cows and barns clean, ventilate the stables, and aerate the milk. Remove the cows immediately after milking from 2 to 5 ounces, even if the latter are buttered or quartered and the former planted whole.

Put all young livestock on clean, safe, well-drained pastures away from the barn lots and other areas frequented by mothers. Keep them away from areas that were occupied by older livestock last year if these areas have not since been used to new crops. Older animals usually harbor worms and may show little evidence of them. Young stock are very susceptible to worm infections and the effects of worms are serious.

The first gain in farm population in the 10 years for which annual estimates have been made was in the farmers of Agricultural Economics was made last year, when 1,302,000 persons moved from cities to farms. The net movement away from farms was 181,000 persons, but a normal increase of 483,000 births over deaths on farms brought the total farm population on January 1, 1931, to 27,430,000 persons, as compared with 27,222,000 the year preceding.

Dairy cows should have all the salt they want. Ordinary cows in milk need about one ounce a day. Heavy producers should get more. Many dairymen mix salt with the grain mixture, using from 1 to 2 pounds of salt to each 100 pounds of concentrates, and then allow additional salt where the cows have access to it. Salt is also necessary for the calves and feed box in the barn, or placed in convenient places in the lot or pasture. Put it in a sheltered place to prevent rain from dissolving it.

SONNET

(For Spring)

No answer then shall fall from any sky,
Having no need of answers, all complete,
For now the storms have hurled them roughly by
To gild with gold the Spring's returning feet;
We light once more the torches on the hills
And gather song together in the land
Where twilight's crimson shadow cups and fills
All hollows with its rainbow-handed band;
So Carnival runs rife through all this world
With secret burgeoning of sight and sound,
Small of love leaves that suddenly uncurled—
Disclosing Mayflowers in the burned-off ground:
And were this all, it could not still be wrong
When Spring comes green, to greet her with a song!

John C. Ritchey

Of the 48 American artists whose work is represented in the Carnegie International exhibition at Pittsburgh 10 are from Chicago.

STOCK FOR SALE

One big Jack, with heavy bone, and one six-year-old Percheron horse will make the season of 1931 at my barn one mile from Carlisle on the Upper Jacktown pike at $19 each to insure a living colt. Money due when colt comes; mare is parted with or bred to other stock without my consent. Lien retained on all colts until season money is paid. Care taken to prevent accidents, but not responsible should any occur.

At same place will also stand Poll Angus bull at $1.50, and one Chester White hog at $1.00.

Renew Your Health by Purification

Any physician will tell you that "Purified Fruitlives of the System is Nature's Foundation of Perfect Health." Why not rid yourself of chronic ailments that are undermining your vitality? Purify your entire system by taking a thorough course of Calotabs—once or twice a week for several weeks—and see how Nature responds with health.

Calotabs purify the blood by activating the liver, kidneys, stomach and bowels. Trial package, 10 cts. Family package, 25 cts. All dealers. (Adv.)

Mr. Brush says: *"When you can see the floor for a mirror, you can bet you're looking at Lustro-Finish."*

Lustro-Finish Protects New Floors and Makes OLD Floors Young Again

It's made by Hanna's to do that one thing and to do it supremely well. In CLEAR, it lets the natural beauty of the wood show at its best. In WOOD TONE, it stains and finishes at one operation.

We've seen Lustro-Finish stand up under the hardest kind of use -- it's practically mar-proof, and never turns white. We recommend it for floors and woodwork.
