### Scene From "Grumpy"

This is one of the biggest dramatic presentations ever given on Chautauqua. Joseph Gifford, in the title role, is a worthy successor of Cyril Maude, the eminent English actor, who starred in this play both on the stage and more recently on the screen.

### ALFALFA POINTERS

"What is the best time of day to cut alfalfa?" is a question often asked. Tests by the U. S. Department of Agriculture show that the time of cutting has little effect on the quality of the hay, provided it is cured properly after being raked. A period of from 4 to 8 hours in the swath will cure alfalfa sufficiently to be windrowed when it is cut in the forenoon or early afternoon. When cut in the late afternoon, delay raking until the following morning. Don't cut the hay until the dew has dried from the plants but rake it before the leaves dry enough to shatter much. If alfalfa hay has overcured in the swath for any reason, leaf shattering may be decreased materially by raking early in the morning while the hay is tough from the dew.

### THE GARDEN

#### THE FALL GARDEN

By John B. Gardner, Kentucky College of Agriculture

The early gardens are ill fall away. In fact part of the early garden has already served its purpose. The mustard greens and the first planting of spinach are done. Many of the green onions are pulled, and the picking of the early peas is at its height. Many gardeners are cutting cabbage and a few are even picking beans.

The first tomatoes are turning pink, and soon they will be in heavy production. Satisfying as all this is, it is not nearly all of gardening to have vegetables now. A good garden will continue producing all summer long, to furnish a bountiful table supply and a storing and canning surplus besides.

To have such a garden, planning must continue. The spaces from which vegetables have been harvested must be put back into later plantings, and the less time this takes the better.

June is the month in which much of this planting is done. For example, late cabbage should be started now. A good plan is to use the rows in which the early spinach stood, or perhaps where the earliest peas were. In order to escape the hazard of transplanting slips in the dry heat of weather of July, a good plan is to sow three or four seeds where the plant is finally to stand, and to thin the seedlings to one. Late Flat Dutch and Louisville Drumhead are both good varieties.

Now is likewise the time to provide for having late tomatoes. This is especially important in the event that varieties were used for the spring setting, for these go out of bearing after eight weeks.

At least the quality and size of the fruit begins to fail at this time. The same method of starting as for the cabbage must be used. If the John Baer or Bonny Best varieties are used, they could be an admirable crop of fine fruit up to frost, and a quantity of tomatoes to can from the vines for winter use. The tomatoes could occupy the spaces left in either the early cabbage.

Beets and carrots for winter storing should be started this month, for the remainder of the early pea ground is usually not worth storing. The best variety of beets for storing is Detroit Dark Red, and the best variety of carrots, Chantenay.

The practice of making small plantings of beans every two weeks until the middle of September should be continued through June and July, but the size of these plantings should be doubled so as to assure a canning surplus. Space will occur in the early potato rows, or the early peas pulled, and even that from which the early sweet corn was harvested may be used.

In August the fall greens should be started. These are kale, Dwarf Siberian variety, turnips (Seven Top), and spinach (King of Denmark). It is wise to make plantings of spinach every fifteen days until September 15 or even October 1, to make the spinach supply last even beyond Killing Frost. Onion ground for potato land may be so utilized.

Finally, a point to remember in making plantings for the "fall garden" is that the ground should be heavily fed with rotted manure, or letter still with a high-grade complete fertilizer, at the same rate as when the "spring" garden was put in.

#### Entomologist Gives Army Worm Control Method

Methods of controlling army worm outbreaks of which have been reported in the state, are discussed in a statement issued by Prof. W. A. Price, state entomologist at the Experiment Station, University of Kentucky.

"Grass lands, wheat and rye fields, especially those spots where the ground is rank, should be examined for the presence of worms," he says. "If present they will be found near the base of the plant. Should they be discovered in numbers over a small area the grass or grain should be mowed, raked, covered with straw and burned. If distributed over a large area the crop should be sprayed heavily with Paris green, one pound to 12 gallons of water. The crop should not be pastured.

"After the worms start migrating from one field to another the line of march should be broken up by establishing a dust furrow. This is made by plowing a deep furrow using the breaking plow and throwing the land side away from the line of march. A log or log filled with water is then dragged up and down the furrow. This produces a fine dust over the steep sides of the furrow. When the worms attempt to go over this barrier they lose their footing and drop back to the bottom. A log dragged through the furrow at this time will kill many of the worms. Also poison bait placed at intervals of 10 feet in the furrow. When worms collect in these they will be killed by tamping or treating with kerosene.

"A poison bait is often used in connection with the dust furrow. It is made and used as follows: To 25 pounds of bran and one pound of Paris green add the juices of six oranges or lemons, two quarts of syrup and enough water to make the bran moist but not soppy. Broadcast this in the infested area at the rate of 12 to 15 pounds to the acre.

The world's largest known copper deposit in Chile is estimated to contain 700,000,000 tons of ore.

#### DID YOU KNOW?

During the fiscal year 1932, the monthly quota of men enlisted for service with the Navy on behalf of the United States will be only 1,200? This is a reduction of 25% of the number enlisted monthly during the fiscal year 1931, and was necessary because of the greatly reduced appropriation of men who are reenlisting in the Navy.

Although the Star Spangled Banner was not officially made the National Anthem of the United States it has been so regarded by the Navy for fifteen years.

In 1836, David Porter became the first Admiral of the Navy.

John Paul Jones served at one time with the Russian Navy as acting Midshipman but when he realized that there was little chance for a poor boy to succeed in the British Navy, he made a change and was ultimately placed in command of one of the U. S. Navy ships.

The above information was furnished by the U. S. Navy Recruiting Station, McDowell Building, Third and Walnut Streets, Louisville, Kentucky.

#### ONE UP FOR UNKNOWN!

(Lexington Leader)

A Lexington man who attended the Berea College anniversary celebration last week is telling this one on himself. He got into a conversation with a young woman who was seated next to him. The subject was Dr. Robert M. Hutchins, youthful president of the University of Chicago.

The Lexingtonian rashly ventured the opinion that young Dr. Hutchins was overrated, that he did not have such a wonderful ability and had been lucky, rather than deserving of the high position he has attained.

"Do you know who I am?" inquired the young woman.

"No."

"I am Mrs. Hutchins."

Shocked, the Lexington man paused, but only for an instant.

"Do you know who I am?" he countered.

"No," said Mrs. Hutchins.

"Thank God!" he exclaimed, as he quickly left his seat and mingled with the crowd.

A news story really ought to have the names of all the parties involved but if no one by with it, why should we tell on him now?

#### WANT UNCLE SAM'S JOBS

Uncle Sam is perhaps the largest employer of people and has of folks call over his way to get jobs with this universal uncle.

It is said that 25,000 persons annually apply to Uncle Sam for jobs as wild animals hunters, plant explorers, forest rangers, and game wardens alone. Many of these applicants send in person upon the government's thanks in Washington and some wish to demonstrate their skill with the gun, bowie knife or lariat.

The forest service alone each year receives between fourteen and fifteen thousand letters from persons seeking employment in the forest service. Of course, the vast majority of these do not get any such jobs because that service employs only about 600 rangers and the annual turn over is very low.

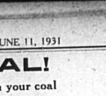
Very few jobs are given through direct application as most of the positions in the government service are filled by Civil Service examinations and a trip to Washington hunting a job is rather futile.

#### ANOTHER HAMMER OUTRAGE

A lawyer received the following letter from a client:

"Dear Sir: My husband got struck and killed by automobile, No. 62-4471. If the owner is rich, sue him at once. He wasn't insured any, but on your noticing me that you have brought suit, I'll hit him in two or three places with a hammer."—Log Island Courier.

Corn is more resistant to cold when grown on soil rich in plant food. Both early and mature corn plants are less likely to be injured by cold weather if the soil is well fertilized.



**One Drop** Bourbon Poultry Medicine Stops Gapes

A few drops daily in drinking water prevents and eliminates Gapes, Roup, Cholera, Indigestion, Bowel trouble, Limberneck, promotes rapid growth, and lessens chances of disease attacking.

Sealed in tin, half size $1, quart size $1.75. At druggists or direct from Dr. Salsbury Laboratories, Charles City, Iowa.

SOLD IN CARLISLE BY HOPKINS DRUG CO.

**Two Meals Day Best For Stomach Trouble**

Skip one meal and drink water instead. Wash out stomach and bowels each morning by drinking water with spoonful of simple glycerin, buckthorn bark, saline compound (called Adlerika).

Adlerika brings out poisons you never thought were in your system. If you are nervous, can't sleep, full of gas, it will surprise you. Adlerika contains no harmful drugs. Get it today; by tomorrow you feel the wonderful effect that this German doctor's remedy. Hopkins Drug Company.

### "Installment Plan" Farm Water System Approved

Howard Matson, as agricultural engineer at the College of Agriculture, outlines what he terms an "installment plan" or progressive system of developing running water for the farm home. When there are not enough funds on hand even to permit the installation of a pump at the sink and to the dispersal line a start can be made and other units added as fast as possible until a complete system has been obtained, he says.

The first step in such a progressive water system should be the sink and drainboards, with the water piped to the sink through a faucet at the back. The cold water system is now complete, and the third step is the addition of a range boiler connected to the cold water line by a tee above the sink, and to the hot water faucet at the sink, with either connections to a waterback on the range.

The final and most expensive addition to the force pump water system is a full set of bathroom fixtures, placed in another room on the first floor or on the second floor of the house. These can be bought and connected up one unit at a time, if necessary. All the plumbing should be carefully done with respect to appearance and permanence so that when, ever it becomes possible to install a hydro-pneumatic tank in connection with gas engine or electric power pumping no change will be necessary in the system except the removal of the force pump.

Blueprints, bills of material, and additional information on the entire water system may be obtained from the College of Agriculture, University of Kentucky, Lexington.

### COMMISSIONER'S SALE

FAYETTE CIRCUIT COURT

Hord Sharp &c. Adm'r, Plaintiff

vs. No. 15453

Bela Sharp, e. al. Defendants

Under and by virtue of a judgment of the Fayette Circuit Court rendered at the above styled action, the undersigned, Master Commissioner of said Court, will sell at public auction to the highest bidder at the front door of the Nicholas County courthouse in the City of Carlisle, Kentucky, at or after fifteen minutes after the hour of 1 p. m. on

**SATURDAY, JUNE 27, 1931**

the following described property:

The undivided one-fourth interest of Hord Sharp, deceased, in and to the following described property:

Located in Nicholas County, Kentucky, about 7 miles east of Carlisle, on the Sharpsburg turnpike, near the Nicholas County line, and bounded and described as follows:

Beginning at a point in the center of the Upton and Shawhenny turnpike road, corner to Lula Sharp in line with Lane; thence with center of said turnpike, N 42½, W 2.96 poles; thence N 47½, W 26 poles, N 46½, W 42 poles, corner to Alf. Peed; thence Will Lane; thence S 87½, W 8.84 poles; thence S 61½, W 28 poles; S 73½, W 12 poles; thence N 42½, W 40 poles to the center of said pike, and corner with Ed Wilson; thence leaving the pike S 4½, E 21.16 poles, corner to Ed Wilson; thence S 86½, W 24.4 poles, corner to same; thence S 3½, E 63.64 poles, corner to Ib. A. Banks; thence S 16 W 27 poles to stake, thence S 26½, W 40 poles, corner to Alf. Peed; thence N 15½, E 134 poles to same; thence with a wonderful ability and had been lucky, rather than deserving of the high position he has attained.

"Do you know who I am?" inquired the young woman.

"No."

"I am Mrs. Hutchins."

Shocked, the Lexington man paused, but only for an instant.

"Do you know who I am?" he countered.

"No," said Mrs. Hutchins.

"Thank God!" he exclaimed, as he quickly left his seat and mingled with the crowd.

A news story really ought to have the names of all the parties involved but if no one by with it, why should we tell on him now?

### HINTS TO FARMERS

A good slogan for the dairy farmer is "Breed the best, feed the best, keep the best, and cull the rest."

Many farmers cut brush in the summer or early fall, in the belief that brush cut at these seasons will not sprout again. The U. S. Department of Agriculture says that here will always be some second and even third growth regardless of when the brush is cut.

weather if the soil is well fertilized.

In palatability good brown alfalfa hay is equal to or somewhat superior to good field cured hay, but it is not superior to it in feeding value. However, much of the brown hay is the result of accident, and in many cases attempts to make brown hay have resulted in failure.

An old auto tire casing split in two through the center of the tread makes good salt troughs for sheep on the range, say Forest Service rangers in the Rocky Mountain region. These troughs lie flat on the ground and are hard to tip over. They are easily moved, as they can be carried in the rear of a car.

Many farmers overcome the difficulty of curing the heavy green crops for winter feeding by curing the hay with a binder. They set up the bound bundles in four, seven open shocks like oat shocks and let them cure for several days. The quality of hay made in this way is good and the labor a little more than for hay cocked by hand.

Many of the Lespedezas make good hay provided the crop is cut long before the seed is ripe. Unless the season is very dry, there will be enough feed in the second growth to reseed the field. To delay cutting until most of the seed is ripe results in injuring the hay. There is no reason, says the U. S. Department of Agriculture, why Lespedeza should not become a standard hay on the southern farms.

Feeding a grain supplement with pasture to young cattle—whether fattening 2-year-old steers or nursing calves—tends to produce heavier and more highly finished carcasses in a shorter time, than on grass alone, the Bureau of Animal Industry found. Cutting grain to spring calves before weaning increases their weight, and finish enough to permit their sale as fat young beeves in the fall when they are about 8 months old. It is not possible to produce a desirable beef carcass at this age on grass and milk alone, says the bureau.

White rot of onion is relatively new to America. It is a disease which may be brought into this country on onions and garlic imported from Europe, where it is widespread and destructive. Any outbreak of this disease should be reported, and specimens of diseased plants sent to the U. S. Department of Agriculture. White rot usually appears in cool, moist weather in spring or autumn. The first signs are yellowing and wilting of the leaves, followed later by complete collapse of the top. Diseased plants may be pulled up very easily, as the roots are almost entirely destroyed.

The farmer can't know the true value of his dairy bulls until he has records of the bulls' daughters, says the Bureau of Dairy Industry of the U. S. Department of Agriculture. "Select bulls whose pedigrees indicate that they have a good chance of possessing an inheritance that will determine high levels of production," advises the bureau. "Use them in a limited way until their daughters prove their value, let the butcher have the bulls that do not come up to a certain standard, and keep in service only bulls that have demonstrated their ability to improve the herd."

Sweetclover can and does make use of nitrogen from the soil but since it is usually grown upon soils poor in nitrogen it depends more than most legumes, upon nitrogen which is captured from the air. The capture of this "free" bar nitrogen is the joint act of the plant and the bacteria, which form nodules on its roots. For this reason inoculation is particularly desirable in growing sweetclover. The bacteria that cause nodules on sweet clover are the same as those that inoculate alfalfa, and in the East a field that has not produced alfalfa or sweetclover in recent years should be inoculated before it is planted to sweetclover.

One of the most effective protectors against the nose bothy, which seriously damages horses and destroys work, or bots, interfere with digestion and may even cause stoppage of the digestive tract and death, is a piece of leather or lashing about 3 inches wide. This is attached at each end to the bit rings by a string or snap to the entire lips, including the corners of the mouth, are protected. Protectors of this type can be made on the farm or purchased. They are much better than the wire baskets or fringes of burlap or leather often used as protection against the nose bothy.

Always dry wet leather slowly and at a temperature not too hot for the bare hand. Strange as it may seem, wet leather burns much more readily than dry leather. If a polish or shine is not desired, an application of oil to leather articles while they are damp makes them more soft and pliable when dry.

## ONE-HALF OF MY STOCK MUST BE SOLD REGARDLESS OF PRICE

**Gordon's Great ½ Sell Out Sale is now in full blast**

and will continue until one-half of my stock is sold. Regardless of price, I am going to clear my shelves of half the merchandise that is on them. All stock is new, this year's goods, and prices have been slashed without regard to what the goods cost. If you want to save money, this is the opportunity of a lifetime.

26 PIECES

Come and see them. Same as set given away at first of sale.

### INSIDE INFORMATION

Canada has established a new government post on Ellesmere island, 1,000 miles north of the arctic circle

Cottage cheese for sandwiches may be moistened with a little cream, with salad dressing or with lemon juice.

A full length mirror is a great boon in every home. A closet door in the bed-room is a good place to install one.

Unless you use glass or wooden reels under the casters or legs, furniture resting on linoleum may leave permanent dents or cut into it.

Plan to make several sun suits or sun suit ensembles for the little ones this spring. The sun suit becomes a real undergarment when the over-blouse or dress is put on.

Stiffen one end of your tape measure by sewing a small whalebone or piece of stiffening in it. You will find it easier to use for many purposes.

When drop cakes spread out too much in baking the trouble is sometimes that the oven is not hot enough, rather than that the mixture is too soft. Drop cakes bake best on a baking sheet without high sides, or on an inverted pan.

When making a number of children's garments at one time it is a good plan to buy extra cards of matching buttons so that if any must be replaced you will have the same kind on hand.

Using the flour to be used for thickening; second, by browning the pieces deep brown color? First, by browning of meat from which the liquor for the gravy is obtained.

Celeria, or knob celery, is available in summer-time and is very acceptable when stalk celery is hard to get. It is pared and sliced, like turnips or carrots, and cooked in a small quantity of water and seasoned with butter or cream. It also makes an excellent addition to potato salad.

Sunbaths are fine for young children if they are accustomed to them very gradually, but care should be taken not to burn their tender skin. Excessive tanning should also be avoided because it prevents the ultra-violet rays from penetrating the skin, and therefore makes the sunbaths less effective.

Don't leave any cereal in the house when shutting the home for a vacation, however short. It is better to give away small remnants than to have to combat weevils on your return. Weevils getting into one kind of food may spread to your flour or to any other cereal foods not in tight glass or tin containers.

Sweet cherries are excellent in salad, either mixed with other fruits or as one of the predominant ingredients. Select large firm cherries and pit them. The cavity may be stuffed with the kind the kind of nuts—whether it is "efficient" protein or otherwise. Find how it ranks as a source of vitamins—i. e., which of the recognized vitamins it supplies and which it lacks. Each has a different function. Learn whether it is high or low in calories, which indicate energy or fuel value. Judge it also as a source of iron, calcium, and other minerals. Each one of these four points of food value can be done on a kneading pad, with the back straight and the shoulders let locking and raking can be done like mopping or sweeping, keeping the abdomen and hips in correct position and the feet squarely on the ground. Pruning, watering and gathering garden products are, similarly, much less fatiguing if good posture is maintained.

Slip covers are attractive on bedroom chairs at any time. They protect the upholstery from dust and hard wear and provide variety in decoration. On small chairs, materials with a small design should be used.

Use a stay under all buttons subject to frequent strain. A stay may be a small flat baby button sewed directly underneath the outside button, on the inside of the garment. Or it may be a tailed tape extending underneath all the buttons down the front or around the waist-line.

If you want to compare the nutritive quality of one food with that of another, keep the following four points of food value in mind: Consider the protein,—how much and what kind the kind contains—whether it is "efficient" protein or otherwise. Find how it ranks as a source of vitamins—i. e., which of the recognized vitamins it supplies and which it lacks. Each has a different function. Learn whether it is high or low in calories, which indicate energy or fuel value. Judge it also as a source of iron, calcium, and other minerals. Each one of these four points of food value can be done on a kneading pad, with the back straight and the shoulders let locking and raking can be done like mopping or sweeping, keeping the abdomen and hips in correct position and the feet squarely on the ground. Pruning, watering and gathering garden products are, similarly, much less fatiguing if good posture is maintained.

Slip covers are attractive on bedroom chairs at any time. They protect the upholstery from dust and hard wear and provide variety in decoration. On small chairs, materials with a small design should be used.

Use a stay under all buttons subject to frequent strain. A stay may be a small flat baby button sewed directly underneath the outside button, on the

accidentally, also will teach cleanliness and order. Some families even label each hook and section of the children's closet with the name of the person who is to use it.

Hang up a card or pad in the kitchen, and enter on it the kind, quantity, and if possible, the value, of anything brought in from the garden for household use. You will be agreeably surprised at the end of a week or month to note how much of your food supply is home-grown.

Feed the dairy heifer enough grain —in addition to pasture—so she will gain from 1 to 1¼ pounds a day.

#### RIGHTO

Jane, six years old, was out for a ride in the country. She saw a swamp where cat-tails were growing.

"Oh, daddy!" she exclaimed, "Look at the hot dog garden."—Pullman News.

The world's only petrified bridge is formed by a petrified tree which stretches across a ravine near Tucson, Arizona.
