WOMEN'S CONTRIBUTION TO THE MOTOR CAR

There is some doubt that people care to hear very much about what goes on under the hoods of their cars.

The driver knows that "driving qualities" are not accidental; they are put there, first, by the manufacturer creates or resolves those results may not interest him. He judges entirely by the results he gets in driving the car.

Well, it is not essential to talk "hoo"; let us talk Results. Results, in this case, mean the driveability of the car. It is the engine that runs with surpassing smoothness, due to its design and the extra precise methods of its manufacture.

Power. This is it. 70 horsepower (we could say 60) at the drive-shaft for the driver's use. With less weight to pull around, the settle of this car—its life-like response—is rather remarkable.

Economy. Our V-8 develops more power on a gallon of gasoline than any other car we have made. It takes 15 per cent more of gasoline than of course, car economy is not only a matter of fuel. For V-8 has that too, but it is also economical in the complete sense—initial cost, operation, maintenance.

Appearance. This is woman's contribution. The motor car must not only be useful, but also good-looking. View the Ford V-8 and you will not only be impressed by its fine appearance, but you will find that the engine runs with surpassing smoothness, due to its design and the extra precise methods of its manufacture.

Comfort. This is also woman's concern. In 30 years she changed the motor car from a wagon to a coach. Comfort is a quality made up of numerous ingredients. There is no coasting without a quiet, smooth-running engine. There is no coasting without a quiet, smooth-running engine. There is no coasting without a quiet, smooth-running engine.
