Spraying Needed To Control Apple Scab

Apple scab caused heavy losses to fruit growers in Kentucky in 1933 because of inadequate spraying. Where proper spraying methods were followed losses were greatly reduced. Excessive wet weather during the blooming period resulted in abundant development of the scab fungus.

An outstanding feature of the 1933 epidemic was the entire failure of a crop to set in orchards where bloom was abundant but spraying inadequate. It is probable that partial crop failures in the past which have been attributed to other causes may have been due to scab. This seems particularly true of winesap, which has been an erratic bearer.

Growers are reminded by the College of Agriculture, University of Kentucky, that the period of development of scab fungus from old leaves on the ground is during rainy weather from the time the early varieties begin to put out leaves until fall bloom. If the spring of 1934 is marked by frequent rains during the pre-blooming period, protection by spraying will be necessary, beginning with the early bud stages and continuing through the blooming period. One weak bordeaux spray in full bloom has proved of value not only in fire blight control but also in the control of scab, and is recommended if the blooming period is extended and wet. If the 1934 blooming period is unusually dry and warm, scab will be a minor factor and spraying may be correspondingly reduced.

Leaflet No. 19, "Apple Spray Schedule," gives full details about spraying for scab. Write to the College for copies.

Rulings Permit More Feed Crops

Recent rulings of the Agricultural Adjustment Administration permit the growing of more feed crops by farmers signing adjustment contracts, says an announcement from the College of Agriculture, University of Kentucky.

One ruling says that oats cut green for hay well before maturity need not be included in the total feed crop acreage permitted on farms under an adjustment contract.

Another ruling allows the planting of certain feed crops on abandoned clover acreages. Where clover or other hay or pasture crops planted in 1933 for use as hay or pasture this year, were killed by drouth or weather conditions before a crop hog reduction contract was signed, the land may be planted to oats, barley, spring-sown field peas or cowpeas, for use only as pasture or for hay cut green well before maturity. This may be done even though the total acreage of feed crops planted in 1934 may thereby be higher than 1933 or 1932.

The corn-hog adjustment contract now being signed by Kentucky farmers provides benefit payments for reducing corn growing by 20 percent and hog raising by 25 percent.

Present plans call for completing the corn-hog sign-up by May 1.

Cedarized Containers Don't Stop Clothes Moths

The mere odor of cedar does not protect clothing from moth attack. Cedarized cardboard closets and cedar chest boards offered the public for protecting winter clothing and blankets against clothes-moth damage will not in themselves safeguard the articles stored in them. During the past summer red fall entomologists of the United States Department of Agriculture made tests of closets and chests impregnated with cedar oil or cedar chips, and the results indicated that many of these containers are worthless when used in accordance with the instructions issued with their sale.

The experiments also proved that moths have no difficulty in crawling into most kinds of cardboard containers, unless all cracks, holes, and gaps are sealed with adhesive tape or heavy gummed paper, or unless the box is wrapped in an outer covering of strong unbroken wrapping paper so folded under at the ends that no moths can get in. Otherwise, once inside, the females lay many eggs and the eggs hatch into worms, which are not killed by the cedar odor, but continue to feed because much damage by feeding on the woolen materials stored in the box.

The specialists at the Department do not believe that such cardboard closets and chests can be depended upon for moth protection, unless the articles stored in them are sprinkled thoroughly with a contact fumigant as paradichlorobenzene crystals and the openings about the doors of the closets and lids of the boxes carefully sealed with adhesive tape.

There's a lot of sweating being done by contractors on Boulder Dam. The men lost so much salt in perspiring that it affected the salt content of their blood. So now they take salt in their drinking water and feel better.

WHAT are YOUR ANSWERS to THESE 8 QUESTIONS ?

1. Should you wake at night and the nervous shock of fierce wills you that your home is ablaze . . . would you need a telephone? No ☐ Yes ☐
2. In your daily life, and especially evenings, would it be a pleasure to know that you could reach for your telephone and call your friends or neighbors from home? No ☐ Yes ☐
3. If sudden sickness should come to some member of your family . . . would you need a telephone to call the doctor in a hurry? No ☐ Yes ☐
4. Would it lighten your wife's duties if she had a telephone to order groceries, ask the cleaner to call, or run other errands, especially in bad weather? No ☐ Yes ☐
5. If a member of your family is seeking employment, do you need a telephone so that employers could reach you quickly when a vacancy occurs? No ☐ Yes ☐
6. When a water pipe bursts, or the lights fail, or other emergencies arise, need a telephone be near to fall to call for help? No ☐ Yes ☐
7. Is there anything other than a telephone that, for a very few pennies a day, will perform all these services? No ☐ Yes ☐
8. Having answered these questions honestly . . . *do you still believe you can afford to be without a telephone?* No ☐ Yes ☐

You want the protection, pleasure and comfort that a telephone in your home will provide, . . . So, why wait longer? *Order your telephone today!*

Rural Electrification Is Aid To Farm Women

Rural electrification is a great aid to farm women in the performance of their household duties, according to Miss Ruth Current, specialist in home management at the College of Agriculture, University of Kentucky.

Miss Current has been making a study of the use of electricity in the homes of farmers who have recently been supplied with electric service. She has found that the use of electricity in the home has increased the comfort and convenience of the housewife, and has relieved her of much drudgery.

Electric refrigeration has been found to be a great convenience in the farm home. Electric irons, washing machines, vacuum cleaners, and electric pumps have also been found to be a great help to the housewife.

Miss Current has found that the use of electricity in the home has increased the comfort and convenience of the housewife, and has relieved her of much drudgery.

THE GARDEN

THE EARLY INSECTS

(By John B. Gardner, Kentucky College of Agriculture.)

It will not be long before the vanguard of the summer army of insects will begin to descend. To say we is not to exhibit undue pessimism, for, certainly, the insects are among what troublesome, the campaign against them need by no means be a losing one if we begin in time, and carried on consistently.

Among the first insects to come are the plant lice on cabbage and the gray beetle that eats out the heart buds of the same vegetable. To combat the one successfully, close watch should be kept for the first sign of downward rolled or puckered cabbage leaves, and if groups of lice are found, these leaves should be carefully clipped off and burned, or a spraying with tobacco solution should be given. The nozzle of the sprayer should be capable of directing the material so as to hit the lice on the under side.

The gray beetle is a more subtle insect, for because its color merges with that of the cabbage foliage, its presence may be detected usually only by the extraordinary growth of the lower leaves of the plant that takes place after the bud is injured. Dusting with an arsenical, as, for example, a spray made of 1 pound of arsenate of lead and hydrated or expressed to 100 gallons of water, will control the beetle effectively.

Another insect to attack cabbage soon in the growing season is the aphis, a chewing insect, and the arsenical dust just described will control it. Dusting should begin as soon as the white and yellow butterflies are seen hunting for the eggs that produce the worm, for the cabbage worm, given a start, is capable of doing severe damage in a short time.

Still another insect that will ultimately come in the Colorado beetle on potatoes, for which a dust or spray of lead and bordeaux is effective as described above, or by applying a spray made of 1 pound of lead, 1 pound calcium arsenate, a tablespoon in a half gallon of water. The first of the wintering beetles may not do serious damage and the application of the arsenical may be delayed until the clusters of orange colored eggs are seen. Once these begin to hatch into the familiar red-and-black shiny "bugs" severe damage may be expected to follow, for any loss of foliage on the part of the potato plant is sure to result in reduction of the crop.

Another insect to be seen soon in the black flea-beetle as well as the striped cucumber beetle, the insecticide mixtures for which and the Mexican Bean beetle, on beans. Still another in the cutworm, which causes on squash and on the melon crops in general. Trust bran and thorough controls, will be discussed in detail in these columns, when the time comes.

HOUSECLEANING HELPS

(By Ida C. Hogman, Kentucky College of Agriculture.)

The worker does neater, more careful work when neatly and attractively attired in comfortable clothing.

In a mixture of joy in doing a job will help one do a high standard of work. A happy frame of mind is a philosophy worth cultivating.

Cooperation of the family lightens the work. Each member of the family should feel a responsibility for picking up and caring for his belongings and should take pride in helping keep a well-ordered home.

Long-handled scrub brushes, floor polishers and dust pans permit the worker to accomplish good results with less effort and strain than when stooping to do the same tasks with short-handled tools.

Keep clean rather than make clean is a good habit to cultivate, as it is a great labor saver. Care can be exercised in the house by keeping the walks, porches, steps and alls clean. Muddy shoes and garments should be cleaned or left outdoors. Foot scrapers at outside doors are a convenience. A storage closet for out-door wearing apparel located near the back entrance is an all in keeping an orderly house.

[illegible] and essential: [illegible] a kitchen to store and furnish [illegible] to hold all the [illegible] to allow more practicable. It [illegible] to do many clerical [illegible] recently as would otherwise be needed.

Practice letting your head rave how much it will [illegible] to avoid [illegible] Make a conscious effort to conserve energy. A little energy saved on every small task will amount to a great deal in the aggregate.

The good cleaning aids, keep them in neat order and store them in safe, convenient place. A cleaning closet may be built or developed from a little room by the back porch, at the head of cellar stairs, at the back [illegible] in the kitchen. It should be large enough to accommodate the [illegible] equipment. Hangers should be provided for the general cleaning [illegible] and for the storage of cleaning reagents, dusters, twine [illegible], gloves, etc.

A good [illegible] methods that scatter dirt instead of removing it.

Artificial rubber having all the qualities of natural rubber, and impervious to the action of oil and heat, has been produced in England. But it's too expensive yet to be put into tires.

New York City's street cleaners collect 5,000 cubic yards of paper and refuse every day.

THE FARM AND HOME

(Kentucky Agricultural Experiment Station.)

The U. S. department of agriculture reports that farmers in the country as a whole are planning an increase of about 7 percent in the potato acreage. At average yields, such an increase would produce 18 percent more potatoes than were grown last year and about 6 percent above the five-year average production.

Self-feeders or hoppers are considered the best way to feed hogs. Separate hoppers should be used for grain and mash. Both should be kept before chicks from the start. Whole wheat and finely cracked corn may be fed, or corn alone will do, along with mash. Allow plenty of hopper space.

Orchards cannot produce at a profit if soil is very acid, as fertilizer effectiveness is lowered, the quantity of production is reduced, and in some cases the root system of the fruit trees is injured. From one to eight tons per acre may be required.

Re-fertilize the lawn as soon as the spring growth is past. Shrubs, grass, etc., are heavy users of plant food, and as grass mowings are cut usually no return of fertility is made. Mixture is rich in bacteria and decaying organic matter, though fertility has a higher plant food content.

Homemakers should note trade marks carefully. It makes it possible to get additional products from the same company, usually of uniform quality; to make repurchases easily and quickly; and to recognize the source of unsatisfactory goods. Trade marks identify products, though they do not necessarily guarantee articles do.

Special care should be taken by homemakers during the summer months that window curtains do not fade out and get sunlight. Hangings that are made simply and that can be laundered with the cleaning of the room, and give an air of coolness and freshness, should be used.

FROM OVER THE LINE

(By J. W. Rogers)

Some Educational Notes.

No child has completed a religious education who has not been taught to sing the sacred songs of Zion.

The rural school presents one of the most important problems in American education at the present time.

Efficiency is the demand of the age, even in school teaching. The demand for efficiency has come to stay; We must possess it or get out of the way.

The time has come when we must vitalize our school work. We must make it an actual part of our pupil's lives.

It is often thought that the high school teacher is engaged in a more dignified work because it is more advanced. Such a view overlooks the fact that the most important years of the child's education are the early years.

A teacher who does not earn more than he receives, receives more than he earns.

Consolidation of smaller schools in to larger ones is not a fad, but a necessity in many cases. At this, the one-room school must not be forgotten nor neglected. Many rural children yet for years will receive all their education in this type of school.

Do you think that country schools can be made as attractive and efficient as town schools? Why?

Disloyalty and indifference towards our schools at the present time are threatening to supersede loyalty and interest.

It is the teacher's duty not to demand many higher beliefs than the highest salary his powers will justify.

"Knowledge is power," may not hold good in school teaching.

It is possible for the next decade to be the virtual reorganization of the rural school system.

"The common schools, oh wing their flight,
Let nations tell their story;
In them, our hope, our strength, our might,
In them our future glory."

MOOREFIELD

John Wilson, Walter Stone and Silas Burgess have gone to Sweetwater, Tenn., to purchase a carload of Jersey cows.

Mr. and Mrs. James Judge are the happy parents of a son, born April 13.

Mrs. Silas Burgess is visiting her son, Fayne and family in Lexington.

Mrs. Roy Smart and children, of Paris, are spending a few days at the home of their father, Sam Booth.

J. T. McQuitty received word Friday of the death of his brother, John McQuitty, who lived in Anderson, Indiana.

Wallace Gudgell's daughter, Mattie and son, Paul, were guests of their grandparents, Mr. and Mrs. Henry Wade, Thursday and Friday.

Mrs. William Brown and children, of Paris, are visiting Miss Lena Hastings.

Miss Beatrice Vice, who is attending school at Morehead, is on the sick list.

Rev. A. R. Robertson, pastor of the Christian church here, could not be with us Sunday on account of the serious illness of his father, Mr. Badger Robertson, of Mt. Sterling.

Mrs. Frank Wilson and Mrs. Elgin Clark motored to Paris Friday.

Mrs. Wallace Rigg and daughter, Miss Marjorie, and Miss Catherine Wilson, were in Lexington Saturday.

Mrs. Harvey Wilson, who has been at the bedside of her mother, Mrs. Clinkenbeard, accompanied them home. She reports her mother's condition unchanged.

Miss Minnie Hellman and Mrs. Annie Doolittle, sisters of Clay Hellman, and Ernest Lawson, of Huntington, W. Va., were week end guests of Mr. Heilman. They all were Sunday dinner guests of Mr. and Mrs. Clive Grover.

Miss Margaret Howe Blount had as a guest Sunday, Miss Joan Wilson.

The Ekler brothers, Harry and Paul, radio entertainers, will present a program of popular song hits, ballads and impersonations at the Moorefield high school auditorium Friday, April 20, at 7:30 p. m. Admission 10c and 15c.

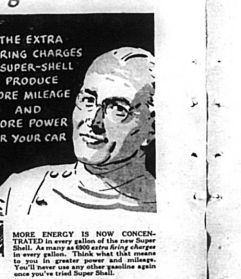
A New "Super-Charged" Gasoline That Gives up to 6900 More Firing Charges Per Gallon

Shell Refineries Develop a New Way to "Re-Make" the Chemical Structure of Gasoline . . . Resulting in More Mileage, Added Power and Quicker Starting

STOP measuring gasoline by the gallon! It's what you get in your gallon that really counts!

In the new improved Super Shell you get up to 6900 *extra* firing charges in every gallon. To give you these extra firing charges, Shell developed a costly new refining process. This new Shell process actually "re-makes" the entire chemical structure of gasoline. Even a single ounce contains as much as 54 extra firing charges!

Firing charges in your engine drive your car forward. That's why these 6900 extra firing charges in Super Shell give you more power, quicker pick-up, and extra mileage.



MORE ENERGY IS NOW CONCENTRATED in every gallon of the new Super Shell. As many as 6900 *extra firing charges* in every gallon. Think what this means to you in greater power and mileage. You'll never use any other gasoline again once you've tried Super Shell.

"I GET BETWEEN 1 AND 2 MORE MILES to the gallon, Hinman, with Shell gasoline, and it makes my car wonderfully spirited, responsive," reports this delighted Super Shell user.
—Kathryn Trumbley, St. Louis, Mo.

AUTOMOTIVE ENGINEER IS AMAZED!, Mr. Allen Taylor (at left) tried super-charged gasoline and tells Shell technical experts, Mr. Robert Taylor and Mr. Hall, "Super Shell has the most powerful engines I have been looking for in gasoline these last few years."

PUBLIC SALE

We will sell at public auction at the home of the late Washington George located two and one half miles North of Carlisle on the Stoney Creek pike, on

SATURDAY, APRIL 21

at 10 o'clock a. m. the following described property:

1 aged horse
1 black mare, 9 years old
4 milk cows, giving milk
1 weaner 1 sled
1 buggy 1 cart
1 Randall harrow
Cutter and double shovel plows
1 ride saddle
1 cutting box
2 sets of work harness
30 barrels picked corn
shovels, diggers, hoes and other small tools
1 small 4 cap cook stove
2 dressers
1 bed stands 1 cot
1 stand tables
1 dining table
3 kitchen tables
1 dining chairs
4 rocking chairs
1 wash stand
1 good Singer sewing machine
2 cupboards
1 ice box
1 cream separator
A lot of carpets, lamps and other articles too numerous to mention

Terms made known on day of sale.

Bolin Crossfield, Executor

Sale conducted by Scott-Crossfield Sales Company. 4-12-2t

BIG JIM

A black Percheron Draft Stallion weighs 1500 pounds. This is a real good-shaped stallion and has proven himself to be an extra good breeder. He is the kind that will get in order to raise good work horses.

Register No. 28966, foaled in 1927. Bred by Joe Booth. Blaze face, white pasterns, 16 hands high. Big bone, big head and ears, and in fact an all-around good jack. I can produce a colt from any mare.

The above stock will stand at the barn of Joe Whaley at Moorefield at $8 to insure a living colt. Money due when colt comes, mare is parted with or colt dies without our consent. But reasonable precautions will be taken to prevent accidents, but not responsible should any occur.

JOE E. WHALEY
Moorefield, Ky.
4-12-6t*

The Brown Percheron Stallion

JOHN

Will make the season of 1934 at the barn of Thomas Barrett at Myers, Ky. at $10 to insure a living colt. Can arrange to service at barn of L. B. Barton at Carlisle, Ky. This horse is a good breeder and I will pay you to see him before breeding your mares. Care taken to prevent accidents, but not responsible should any occur. Money due when colt comes, or mare parted without our consent. L. B. Barton and Herman Barrett.

SUPERIOR RACE

A belief the next hundred years will see the beginning of a superior race of men was expressed at Spokane, Wash., last week by a noted surgeon, Dr. Malcolm Mac Eachern associate director of the American College of Surgeons.

Dr. Mac Eachern predicted the medical and physically unfit will bring the race to a higher standard as will the sectional convention of the college.

In this period of transition, Mr. Mac Eachern predicted, the science of medicine and its administration will have advanced enough to combat the destruction of the body through infectious and dental disorders caused by the terrific speed man is now traveling.

In most fields of medicine, Dr. Mac Eachern predicted, great advances will be made toward advancing the ailments to which man now is subject. But in the field of nervous and mental disorders "we shall be in the dark ages. Even the passage of a hundred years."

Dr. Mac Eachern predicted that tuberculosis and diabetes will be conquered within the next century. At that time preventive measures will have reduced the incidence of goiter.

"Too," Dr. Mac Eachern added "we hope there have made advances in the prevention of gallstones and ulcer of the stomach. The hazard of childbirth will be even further reduced by the time the next hundred years will further. The nature of cancer will have been revealed, but it will still claim many victims."

LET US HAVE YOUR House Cleaning

He Didn't Forget

By ALICE DUANE

© by McClure Newspaper Syndicate WNU Service

FOR twenty-five years the annual ball at the Wildcliff School for Girls has been the big event; then all the cadets from the nearby military academy came to dance with their sisters or French blue; then sweethearts, fathers and mothers from home.

Tonight the college was in readiness for the colossal event. At her window at the far end of the second floor hall Fran Marshall, teacher of English and literature, looked down over the rolling campus bathed in a soft silver moonlight. Twenty years ago, she had been a girl at Wildcliff and had been thrilled at the prospects of the annual ball.

She, too, had had her party dress—a white voile with lace-edged ruffles around the bottom.

And it was twenty years ago tonight that the waltz and two-step had sounded out over the campus until the small hours of the morning, and Fran Marshall had danced nine dances with the tall blond cadet in blue; had walked with him beneath the oaks in the moonlight, and eaten ice cream and cake with him behind the palms in the gymnasium.

He had liked her white dress, but he had told her she had liked her emblem earrings, long slender pendants set in dull gold, that were almost like miniature daggers. He had said emerald green was his favorite color. And he had kissed her that night and said he would come back.

Fran never left Wildcliff. Following her graduation she had gone far enough away from Easthampton, hoped she never would, to be out of sight and mind of him.

It happened that Carey waited the arrival of Mrs. Wilson.

"Of course, you will not thought she would be such a charming woman. But she certainly was. Her charming white she stood poised in the doorway with its gold girdle, and her big soft eyes were shining.

"I'm sorry I'm late, Carey," she said, "but I'm not to blame. Mr. Wilson was delayed at the office and I had to wait for him."

"But won't your wife want to—well —look us over, too?"

"Who's she?" corrected Carey, "is on the high seat . . ."

Fran recommended the lady. Having got the information, she seemed more than ever sorry that she never could get in touch with—how this evening—about any questions—come up which we might want to ask you about?" Carey put her hand on her arm confidentially.

"Since you're sorry, let me help you," she said. "I'll be glad to."

After a moment or two longer he had to watch her vanish into the subway.

The rest of the afternoon seemed both short and long. Always through Carey's brain kept running, "Then Shelah met me at the subway entrance, but that didn't prevent his heart losing a beat at the very remembrance of her loveliness each time the telephone rang.

He hoped against hope that some information would be in demand about Shelah Carey, but it was not until after five that Wilson rang him up. "I say, old chap," said Wilson, "my wife is tremendously taken with the apartment and wants to celebrate. We wonder if you'd waive convention and dine with us once and a while. My sister is along and it will just make a jolly party."

Thus it was that Carey, armed with two of the daintiest, tiny messages he could secure, met Mr. Wilson, his wife and sister and a talented cliff.

Carey was about to tuck the sister, as he supposed, under his protective wing, when Wilson stopped him with a laugh.

"Mrs. Wilson and I have been married five years, but I still prefer to think of Shelah as her—rather than let the other fellow do it."

Carey laughed Carey with a flush that was more joyous than embarrassing. "I supposed," he looked in criminality at that wonder woman who was not his neighbor's wife, "in fact, I was led to believe—"

"Oh, that was one mistake," said Miss Wilson demurely, "I only speak of my brother as Shelah's husband when I'm quite correct—when addressing a perfect stranger."

"I am glad you think me perfect," rejoined Carey, "because the feeling is mutual and we can soon forget the stranger part—can't we?"

The other two had gone ahead and the girl tucked her arm into Carey's. "I think we can be done in time," she agreed flippantly.

Lonesome Spot

Friend—Don't you worry. Tomorrow when you give your speech you will have all intelligent men on your side.

Candidate for Parliament—That is what is worrying me. I would rather have the majority.—Lustige Blatter, Berlin.

During the last six months construction under the Public Works appropriation has actually been started on enough road mileage to equal six great transcontinental highways across the United States.

Land and sea spiders usually have eight legs. But in the Antarctic region some sea spiders have been found which have five and six pairs of legs.

A meteor fell in broad daylight and struck and burned a house in the village of Rinconada, Spain. It is the only case known in history where a meteor has hit and destroyed a dwelling, though there are hundreds of other instances of their striking houses.

The weather in the St. Johnsbury region of Vermont this year has been the coldest in 40 years. As a result the folks there face an ice shortage this summer because the ice has been so thick it couldn't be cut and harvested.

Another Man's Wife

By SHIRLEY DENTON

© by McClure Newspaper Syndicate WNU Service

CAREY BURTON knew when he received the invitation to have dinner with his sister and her husband that something was in the wind.

And when Sis promises my favorite fried chicken for dinner, and pours forth reams of French blue; then sweetheart, I'm suspicious, that fatty said sweetly!

"You know, Carey, Sam and I are going off again to France and—"

"Oh, that's it, and I am to have that infernal bother of renting the apartment for you. The scramble last time was like an Irish meeting, and I spent three whole days dashing from the office to the apartment with an assortment of apartment seekers."

"Then the first edition of the apartment hunter's guide," Sis broke in, "will never ask $150 a month and there won't be such a rush."

"I'll be mighty glad when it's over," said Carey as he signed the right tenant for the apartment's the right thing." "Shelah will send my clock to her grandfather's and be coming in all the way from Easthampton, hoped she'd forget it, but I'm sure she is there about 10 o'clock."

So it happened that Carey waited the arrival of Mrs. Wilson.

Of course, he had not thought she would be such a charming woman. But certainly she was quite fed up telling people about the apartment. It was not long until the two were chatting like old friends, however, that prompted Carey to some one right tenant.

"That's the right tenant," she declared. "I had some trouble in getting her apartment and she is
