Tests Show How To Make Good Pasture

The body weight of a cow may be estimated by the amount of feed she consumes. A study of the feed consumption of a cow during the winter months has shown that the amount of feed consumed is directly proportional to the amount of feed available. This study has shown that a cow will consume about 100 pounds of feed per acre of pasture per year.

Go To Church And Sunday School

We do not let the heat or cold keep us from our own business; do not let it keep us from our worship. God's business is more important than our own. Christianity is not a thing to be put off like your work. Christ said, "Take up your cross daily and follow me." The early Christians were "steadfast in the apostle's doctrine, in breaking of bread, in fellowship and in prayers." (Acts 2:42). Hebrews 10:25 says, "Forsaking not the assembling of yourselves together as the manner of some is. But exhort one another all the more as you see the day approaching." Every person of intelligence is held responsible for a knowledge of God's word either by reading or hearing it. "Study to show thyself approved unto God, a workman that needeth not to be ashamed, rightly dividing the word of truth."
