THE MOUNTAIN WATER MILL.
 In the neighborhood of the mountain counties are three or four water mills, one of which is still in use. It is not far from a stream. I can recall seeing a small stream, nothing more than a creek, that runs over a dam of two or three feet, and the water is so clear that it is almost as clear as the water in a glass. The mill is made of logs and is so simple in construction that it can be made by any one who has a few logs and a saw. THE FARM AND HOME.
 (College of Agriculture, University of Kentucky)
 Letter banding is done with both hands. Washing with ammonia solution is often used to soften water, and is more effective and less expensive than soap. Eggs from water heaters result in great water of soap.
 Apples and date salad. Cut apples in long strips. Cut dates in similar strips, using orange juice. Much date for apple. Serve on lettuce with French or mayonnaise dressing.
 Water for washing a hog in a barrel should be between 34 and 35 degrees. The water should be changed every 12 hours. This gives a fresh supply of water for the hog to drink and to wash in.
 Pushing the kitchen sink drain daily with boiling water is usually prevented. It is especially desirable to run the water down the drain after the dishes are washed, thereby carrying away all grease.
 Eggs for hatching are fresh, or should be fresh, straight from the hen. They should be washed in white wine, and weigh from 1.5 to 2.0 ounces.
