ALMOST overnight the familiar tank-truck became a vital part of the nation's war machine—essential to the very life of the nation.

Every railroad tank-car is needed to haul petroleum products to the eastern seaboard. Therefore, the oil industry's own transportation system—the tank-truck—has taken over the short trips which were formerly made by many railroad tank-cars.

When you see the Standard Oil Company tank-truck on the road today, you will know that it is running against time to get needed stocks of petroleum products to military camps and fields, to war industries, to other trucks engaged in the transportation of a thousand war necessities, to farmers for their tractors used in food production, and to countless other places where petroleum is indispensable.

'Round the clock faithful drivers operate these hard-pressed tank-trucks. Without this tank-truck war effort would lag—or stop! Every mission is urgent—many are vital.

Approximately 468 names comprise the list of men from Nicholas county now serving in the armed forces. The list is complete up to this date as per the records at the Draft Board office and compares with the list on the large bulletin board in the court house yard. There are probably some mistakes, but care has been taken to complete the list as nearly accurate as it is possible. At the bottom of the list are those who received training through the local National Guard and the Militia.

GAS RATIONING WRONG

(Shelbyville News)

Midwestern Congressmen are reluctantly right in opposing the spread in Eastern gasoline restrictions.

There are many factors to be taken into consideration in trying to provide an equitable basis for gas rationing. When they are weighed, it is apparent that equal allotments for motorists east and west aren't just or right, and don't serve the aim of equalizing things.

If there is a shortage of gasoline or means of transporting it in the central states, or if Uncle Sam needs that gas right away, then by all means tighten up on rationing, without delay. But if such a proposed move is insisted only by grumblings on the Atlantic seaboard, then let 'em grumble.

The reasons for allowing only 1.5 gallons on A cards in the east, and 4 gallons in the central states are based upon certain factual differences between the two sections. These include the distances between towns, the difference in transportation facilities, and passenger and freight, and both passenger and freight, and the great disparity in population.

There can be no equitable allotment of gas with any great differences between these two geographical divisions. Better to work out some form of distribution on a basis of population, or occupation. At any rate, there shouldn't be a blanket rationing decree merely to gratify motorists in the east.

THE L. & N.'s FREIGHT BUSINESS

Total revenue cars handled by the L. & N. Railroad in July, 1943, marked up 111.6 per cent of normal on that railroad's Business Barometer, a gain of 4 points over the same month last year, according to the August L. & N. Magazine. All three main groups of traffic—Coal, Other Freight and Freight from Connections—showed improvement.

Total revenue cars handled in the first seven months of 1943—January through July—registered 107.4 per cent of normal on the Business Barometer—a gain of 1.1 points over the same period in 1942.
