WHAT IS IT GOING TO COST YOU?

WHAT is electricity going to cost you after the war? Records show that as the use has developed, costs drop. Today our average domestic rate is about half what it was only nine years ago. If this downward trend can be maintained we hope to have the cost for home-use comparable to that of the government subsidized power system within a few years.

leges under existing State Law, would be required to pay only a few cents in state taxes and no federal tax. This is only one of the advantages government subsidized power systems have.

With sound business management the electric power industry is meeting all normal, civilian and war plant demands for service. And in the face of rising operating costs it goes right on selling electricity at lower and lower prices. Where else can you match this record?
