The American Way

MUST BE EXTENDED
by George Peck

In a recent editorial I expressed the hope that the Republican party would incorporate in its platform a pledge not only to continue Social Security but to expand it to include every citizen of the nation.

From a reader comes a very pertinent and sound criticism. I quote a part of his letter. I feel I have to differ with you. The results of Social Security legislation certainly must tend to destroy thrift, savings and self-dependence. If we take a man's money by taxes and set it aside for him for his future protection, he certainly is less inclined to do the same thing for himself and so certainly don't strengthen his character ..."

In rebuttal to this I would now like to say what I neglected to say in the previous editorial, that old age pensions under Social Security should be kept at a mere subsistence level, so as to leave plenty of incentive for the average self-reliant individual to supplement his pension by his own industry and thrift during his years of gainful occupation.

As now, there always will be certain of our citizens who, taking no thought of the morrow, will make no attempt to lay something aside for their old age. While it is deplorable that there are and will always will be such prodigal individuals, they constitute a problem that must be dealt with timely and realistically.

Also as now, there always will be millions of people who have been industrious who honestly have tried to be thrifty, but through no fault of their own will arrive at old age with nothing set aside for the rainy day. For example, take the parents who have raised five or six children, sacrificed to give these children advantages, including a good education, thus contributing good citizens to the nation, and who may also themselves at the end of their productive years with little or nothing with which to tide them over their declining years.

Without the old age pensions of Social Security, people who either by reason of their own shiftlessness, or due to causes over which they have no control, become wards of the government or of private charity. With the old age pensions of Social Security, they simply reap the benefit of what the government forced them to set aside out of their own earnings during their gainful years supplemented by an equal amount from their employers — they do not become charges of government, relatives, or private philanthropy. The percentage of deduction from wages necessary to insure this modest-but-desired independence in old age can be kept so small as scarcely to be missed as it is deducted.

The administration of Social Security to date has left much to be desired. It does not cover all of the people, which in itself, is unjust discrimination. Also, it is generally known that billions of dollars which have been taken from wages and salaries for the Social Security fund have been spent by the government for other purposes. This is dishonest and a practice that must be stopped. Social Security, properly planned and administered, need not destroy incentive and thrift, and will make for a happier and better American society — and that, in my opinion, seems to be a most worthy objective, something to which the political leaders of both major parties can well give their most earnest attention.

BIBLE QUESTIONS
ANSWERED BY THE
VOICE of PROPHECY
INTERNATIONAL BIBLE BROADCASTER

Question — I hear preachers warning against sin, but I'd like to know what sin is.

Answer—A Bible definition of sin is found in I John 3:4: "Whosoever committeth sin transgresseth also the law; for sin is the transgression of the law."

Q.—Why was it that Christ would not touch a man with leprosy when He healed him?

A.—But He did touch the leper. "And it came to pass, when He was in a certain city, behold a man full of leprosy: who seeing Jesus fell on his face, and besought Him, saying, Lord, if Thou wilt, Thou canst make me clean. And He put forth His hand, and touched him, saying, I will: be thou clean. And immediately the leprosy departed from him." Luke 5:12, 13.

Q.—I have always prayed that I would not die in the winter or on Sunday. Isn't that the meaning of Matthew 24:20?

A.—It is clear that this text refers to the Christians' fleeing from the Roman armies just before Jerusalem was destroyed. To make this clear, let us read verse 16 with verse 20: "Then let them which be in Judaea flee into the mountains: ... But pray ye that your flight be not in the winter, neither on the sabbath day." There is no reference here to death or Sunday, since Matthew is speaking of the Sabbath, which is to endure "to the end of the age" first.

Q.—Why is the first book of the Bible called Genesis?

A.—The word means "beginning," and this book contains an account of the creation of the world, the origin of man and of all things.

Q.—What is the longest chapter in the Holy Bible?

A.—It is Psalm 119 which has 176 verses. It is said that David Livingstone memorized this Psalm while working on a morning mill.

Q.—I have often quoted the text, "Cleanliness is next to godliness," but I can't find the reference. Please give it in your column.

A.—We cannot give you the reference because it is not in the Bible. It is a proverb attributed to John Wesley. The Bible, however, does say a lot about being clean. Here's a sample in Isaiah 1:16: "Wash you, make you clean; put away the evil of your doings from before Mine eyes; cease to do evil."

Q.—What was the scape-goat mentioned in the Bible?

A.—It was a goat upon whose head the high priest symbolically laid the sins of the people, after which it was sent away into the wilderness. Read about it in Leviticus 16.

Q.—What is the meaning of the word "Gentiles" so often used in the Bible?

A.—It signifies "the nations" in the BIBLE QUESTION COLUMN, *The Voice of Prophecy, Box 55, Los Angeles 53, Calif. The question of general interest will be answered in this column as space permits.*

We favor the Southern revolt if it is against the Weather Man.

WARTIME ESSENTIAL—YOUR OWN HOME-CANNED TOMATOES

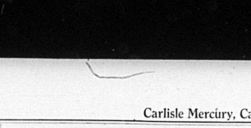

Photo Courtesy Ball Bros. Co.

Let there be no doubt about it, loss of home-canned tomatoes is unnecessary at any time and inexcusable in wartime, unless necessary because spoilage is caused by carelessness in selecting, preparing, packing, and canning, or by not following the manufacturer's instructions for using jars and caps, inexcusable because wasting food is wicked

mouth of the jar. After two or three tomatoes are in the jar, press them gently with a wooden spoon until they crack and their juice fills the space between them. Continue skinning, packing, and pressing the tomatoes until the jar is filled to within one inch of the top, then add one or two teaspoons salt, and close the jar according to the manufacturer's instructions.

"Work quickly until you have enough jars packed to fill the canner, then put them in the canner slowly. Bring the water to boiling as quickly as possible. When boilers are dancing all over the top of the water, begin counting canning or processing time and lower the heat. Keep the water boiling steadily but quietly for forty-five minutes, then take the jars out and set them several inches apart and out of a draft to cool.

"This is known as the cold pack method and gives a canned product of superior flavor, but the tomatoes tend to shrink a good bit in cooking and there is usually some waste space in the jars. If you object to wasting a small amount of jar space, you should select and prepare the tomatoes as suggested, then cook them in a covered pan until they are boiling hot before putting them into clean hot jars for processing fifteen minutes at boiling in a water bath canner.

"Although the water bath is the preferred method, cold packed tomatoes may be processed in a steam pressure cooker for ten minutes at five pounds pressure. It is best to forget about the old-fashioned open kettle method, but if you must use it, remember to work at the stove so that everything—jars, caps, lids, rubbers, and food—can be kept boiling hot and every jar filled and sealed in double quick time.

"Don't risk canning tomatoes in an oven and do, please, remember that trick methods such as the 'blanket' are likely to trick you."

BE WISE! FOLLOW THESE DIRECTIONS. In BIBLE QUESTION COLUMN, *The Voice of Prophecy, Box 55, Los Angeles 53, Calif.* The question of general interest will be answered in this column as space permits.

We favor the Southern revolt if it is against the Weather Man.

SUNDAY SCHOOL LESSON

By HAROLD L. LUNDQUIST, D. D., Of The Moody Bible Institute of Chicago. (Released by Western Newspaper Union.)

OVER THROUGH SELF-DISCIPLINE (TEMPERANCE LESSON)

LESSON TEXT—Proverbs 1:7-19; Jeremiah 35:5-8; I Corinthians 9:24-27; I Thessalonians 5:6-8.

GOLDEN TEXT—Every man that striveth for the mastery is temperate in all things.—I Corinthians 9:25.

Discipline — that word doesn't sound exactly attractive, does it? It makes us think of punishment for wrongdoing often in reality it is a very helpful word which means training. Discipline, self-discipline, is the secret of success, so that life becomes safer, simpler and more efficient.

When the Morro Castle caught fire, there was time for everyone to escape, but 134 out of the 500 on board were lost because they could not keep each other. When the President Coolidge sank in the South Seas 4,500 miles from home, 19 men made the difference" Discipline, that's all. But it was enough.

There are many kinds of discipline, and all have their important place in preparing men to live well ordered and useful lives. The disciplined life has power to meet trials and temptations. We find in our lesson three kinds of discipline:

I. Home Discipline (Prov. 1:7-10). The training received by the child early in life from its parents is of the greatest importance in forming character. Children should learn the true standards of life, and be held to them. Failure to do so is a failure to walk in the right way.

It is here that they most effectively learn the danger of the use of intoxicants and the importance of keeping their bodies clean and strong for the service of God and country.

Some parents (possibly misled by attractive, but false theories of education) think that the correction or punishment of a child is not to be permitted. They assume that they are being kind to a child by not limiting his development, or trying to direct it. These are the people who "curse their children with kindness," which is in fact the greatest of cruelties.

Only a fool (v. 7) will despise the instruction of his parents, and only a fool of a parent will fail to give that training which is like "an ornament of grace" (v. 9) in the life of the child, man or woman.

But the discipline of the home needs the support of

II. Social Discipline (Jer. 35:5-10). The social order, which concerns our relation to our fellow men, disciplines each of us. It makes many and what sometimes seem burdensome demands of us in order that we may live well as those around us, may have the privilege of living peaceful and useful lives.

The "in-law" man or woman who draws from his fellowship with others only what he wishes will find himself in a lonely place.

The Rechabites had made a vow that they would not drink intoxicants, and as a tribe they stood by that vow even when tested by the commandment. (Note that we say tested, not tempted. God never tempts any man, and that is the winning of men out of their selfishness, individuality or families or classes or races or nations into the fellowship of the family of God.)

Under the auspices of the American Friends Service Committee (Quakers) a new interracial experiment is being tested in Indianapolis, Ind. In "Flanner House," designed by an outstanding Negro architect, it will serve a much larger constituency. Flanner House offers its congested community a social service department, a day nursery, clubs, educational classes, toy library, work shop and an employment department. Last year 10,000 placements were made by the employment department in cooperation with the U. S. Employment Service. Cleo W. Blackburn is the superintendent of Flanner House.

Believing that "Christian stewardship" — defined as "acting on the principal that man is only a temporary trustee for all earthly possessions which he has merely belong to God" — is one of America's present needs, the United Stewardship Council, composed of 30 denominations of Protestant and Protestant churches in America is this year emphasizing their principals as basis to true freedom and lasting peace in the world. They are planning that this principal be emphasized from every Protestant pulpit in the land. As a part of their effort, Dr. Arthur H. Limouze, of the General Council of the Presbyterian Church, U. S. A., is giving a series of broadcasts on "The Supreme Stewardship" over the Blue Network of the National Broadcasting Company, each Monday of August and September, from 12 noon to 12:15, Eastern War Time.

A recent statement of the Federal Council of the Churches of Christ in America gives approval to the government and church policy of resettling American-s of Japanese descent in communities in the Middle West and in the East. It says "We have noted with deep concern the expressed attitude of certain public officials against the re-ettlement of people of Japanese ancestry in their communities. We call attention to the fact that these are law-abiding people whose character and conduct have been exemplary under trying ordeals such as few of us have had to face. They have been thoroughly investigated by government agencies before being released from relocation centers for resettlement. There has not been a single person of Japanese ancestry brought to trial in any U. S. court on charges of sabotage. American soldiers of Japanese descent have served this country with courage and distinction in Europe, Africa, and the Southwest Pacific."

"In the realm of rural values the church has a supreme mission of interpretation and activity," according to Dr. Mark A. Dawber, secretary of the Home Missions Council of North America. "Rural people themselves do not appreciate the significance of what they represent in the national picture and the degree to which they may help determine civilization. Moreover they must be helped at the point of getting more of life's satisfactions out of their so-called 'common' things. If rural life cannot be brought to the place where it will accept these values of childhood, the home, the land, and the community as primary issues, which life will find its deepest satisfactions, then there is little to be said. These values are the seed-beds and also the preservers of the things of the spirit."

Young Opera Star Leans to Pinafores and War Bonds

The young American concert-opera star, Marjorie Hess, has her victory garden rambling over this colorful pinafore apron. It is a life saver for your party dresses, and fun to make, even for a beginner. Miss Hess suggests making several aprons because then, with a minimum of time and effort, you will save enough money to buy extra War Bonds and stamps. Suitable patterns may be obtained at your local pattern-room.

U.S. Treasury Department

NEWS IN THE WORLD OF RELIGION By W.W. REID

Believing the old adage that Satan finds mischief for idle hands, and that this has close relationship to present-day juvenile delinquency, the Rev James R. Colby of Christ Episcopal church, East Tawas, and St. John's, Au Sable, Michigan, has organized a group of thirty of his parishioners to revive old and almost forgotten crafts. In the group are boys and girls as well as adults. They are occupied and kept off the streets, and Mr. Colby says, are not going to get into trouble. Among the activities are sewing, repairing toys, making quilts, painting linoleum blocks, and rug weaving.

"Those who carry the Gospel through the world contribute to that most urgent need -something more precious and more relevant than that which statesmen and diplomats can ever do," said the Archbishop of Canterbury at the 145th anniversary of the Church Missionary Society in London, England. "We need the statesmen's work, and, of course, we must pray for them that they may be rightly guided: but all that can be done by them is to devise appropriate machinery for the kind of people who are already in the world. There is something deeper that must be done before and the foreign bishops, as well as that is the winning of men out of their selfishness, individuality or families or classes or races or nations into the fellowship of the family of God."

Of Interest to Farmers of Nicholas County

Farmers Urged to Seed Grains for Fall, Winter Feed

Farmers whose supply was reduced by drouth are being urged by the Kentucky College of Agriculture and Home Economics to "sow every possible acre in small grain in early fall or even late summer."

Rye and barley can be sowed in August and wheat in early September, to furnish grazing in October and November. If the winter is mild they will provide feed all winter. Where possible to obtain seed, it is suggested that ballo rye be sown.

In some instances it still may be time to sow sudan grass, which furnishes a large amount of grazing in a favorable season.

The college again is stressing the value of alfalfa. The first cutting of alfalfa is nearly always good and in an emergency alfalfa can be used for pasture in summer. Alfalfa sown in August, along with a few pounds of timothy or other grass seed, will make a crop of high-quality hay the next year.

Where full stings of alfalfa can't be made, it is suggested that 5 or 6 pounds of alfalfa seed and 6 to 8 pounds of timothy seed be used to the acre. Timothy sown in August will make a crop the following year, particularly if nitrogen fertilizers are used in the drouth.

In seeding small grains, the college is recommending that superphate fertilizer be used on all but high-phosphate land, and it may even be profitable to add 100 to 150 pounds of ammonium nitrate to the acre when the land is moderate fertility, it is stated. If the land is moderately fertile, it is better to delay the use of nitrate until early spring, so as to provide more spring pasture.

Disease Resistant Bluegrass Studied

The Kentucky Agricultural Experiment Station's program for the improvement of bluegrass includes the study of diseases that have been causing much damage in the state. These are leaf-pot, smut, rust, rot, and mildew.

Thirty-eight strains of bluegrass with good growth habits were tested in the greenhouse for reaction to mildew and leafspot. Six strains were found resistant to both diseases.

It is believed that eventually a large number of strains of bluegrass will be found that are resistant to most, if not all of the diseases now in Kentucky.

Timely Topics

Saving Early Potatoes

Although many gardeners and farmers grow a late potato crop for winter use, many more must depend on holding their early potatoes, their Cobblers, for example, and in this they are not always successful.

The ideal temperature for holding potatoes is 60 degrees, and a dark, slightly moist room in a house cellar is the best place. Potatoes will keep if doors or windows are opened to fill it with cool night air to bridge over hot days. Even then, 70 or 80 degrees is the rule. The potatoes should be quite ripe; 10 days to 2 weeks should be allowed after the tops have completely dried, for the skins to harden. Extreme care should be taken not to scuff or even bruise the tubers; they should be laid in the gathering container, not thrown and there should be room in the cellar, out of the heat, just as soon as possible. They need no "drying-out"; in fact, all that is really accomplished is to heat them up, and this is not desirable. Boxes or baskets should be used in carrying potatoes to the cellar, as burlap bags cannot rub or chafe each other.

But, not too many house cellars are available, but "cool" barn stalls are frequently under the dwelling rooms and thickness over hot water. Add heated egg yolks and syrup and cook two minutes. Remove from the fire and add vanilla. Cool and pour over cake.

Recipe of the Week

For an extra special dessert, there is nothing which equals peach ice cream. It is simple to prepare, the crushed fruit being added to a cooked custard foundation, then frozen.

The smooth velvety texture desired in ice cream depends in part upon the use of rich cream, as thin cream makes it coarse. The rate of turning the freezer also affects it. Regardless of the eagerness to taste this frozen delicacy, it should be frozen slowly. The proportion of ice and salt is important in the smoothness of the ice cream too. Use eight parts of ice to one of salt.

The following recipe is suggested by Miss Florence Imlay, foods specialist at the Kentucky College of Agriculture and Home Economics.

Peach Ice Cream

2 cups milk
2 tablespoons flour
2 tablespoons water
3-4 cup white corn syrup
2 egg yolks
1 cup heavy cream
1 teaspoon almond or vanilla flavoring.

Scald the milk, then stir in the flour and water mixed to a paste. Stir constantly while the dumplings are used. But these are not as cool as one thinks, as a thermometer will check. Re-idle, there is the risk of the potatoes "greening" and taking on a bitter flavor, which brings us to the second best way to keep potatoes. Is to bury them in the ground where they grew.

However, most early potatoes are dug when the ground is too dry and tight from reaching them to turn green. Also, in shallow soil, the temperature may rise to 100 degrees or much higher. Too much heat will wet the soil, and intense heat may follow, to "cook" the potatoes and spoil them.

It is the combination of heat and moisture that causes the rotting of potatoes in the ground, but the way to correct both is simple. It is merely to throw enough soil to each side of the row, or to draw 8 to 10 inches of soil over the row with a hoe.

The soil cover acts as insulator against sun heat, and keeps the potatoes dry by absorbing rains like a sponge. In the hills in the middles, drainage ditches are made, and potatoes are below the level of the tubers, again, to keep them dry.

True, there is this extra soil to move in digging them, but there will be more than enough to dam if they must face the hazard of loss through lack of cover.

Dairy Cow Income Best in 25 Years

Clifton Norman of the Sharpe community in Barkley county, who has a herd of 13 cows, reports the largest income per cow per day for 15 to June 15 that he has ever had in his 25 years of dairy experience. The herd has averaged a period were $405, not including his subsidy payment. Farm agent H. E. Rothwell is advising dairymen when hauling to the creamery, to add to make early arrangements for a grain supply, so that production will not suffer.

Common Diseases Plague Chickens

In a study of the causes of sickness and death among chickens in 400 flocks the Kentucky Agricultural Experiment Station found preventable common diseases and nutritional disorders responsible for most of the losses. Sixty-nine percent of the deaths came from pullorum disease, coccidiosis, and nutritional disorders.

Says the Station's report: "Reducing or eliminating losses due to any form of these conditions requires no expenditure for medication. Correct feeding and sanitary precautions will effectively control them."

In many flocks the birds were found to be suffering with nothing more or the disorders combined. In some flocks there was a combination of underfeeding and disease or parasites.

Wheat Yields Well

Martin Baskett of Henry county harvested 80 acres of wheat that totaled 2,250 bushels, or 25 bushels to the acre. The good yield was due, Farm Agent W. B. Howell believes, to the use of Thorne variety seed drilled in with 4-12-4 fertilizer, on land that had had a liberal application of lime and phosphate in recent years.

Yellow Starch Corn Is Best Yielder

Yellow starch corn is the best yielder in the Kentucky corn variety tests, according to the Kentucky Agricultural Experiment Station. Yellow starch corn averaged 39.2 bushels to the acre in the tests, while white starch corn averaged 37.2 bushels.

Hybrid Corn Yields Increased

Hybrid corn yields have increased 20 bushels to the acre in the past 10 years, according to the Kentucky Agricultural Experiment Station. Hybrid corn yields have increased from 20 bushels to the acre to 40 bushels to the acre.

Timely Tips for Poultrymen

Keep the chicks growing. Don't let them get stunted.

Keep the chicks growing. Don't let them get stunted.

Keep the chicks growing. Don't let them get stunted.
