### Why Agricultural Limestone Should Be Used

KENTUCKY SOILS ARE LACKING IN AGRICULTURAL LIMESTONE. Experiments over a long period of time have shown that by the use of agricultural limestone you can increase the yield of corn 24%, wheat 20%, grass and clover hay 59%, and soybeans hay 25%. Yields of other crops also are increased by the use of agricultural limestone. A great improvement can also be made in your permanent pasture.

By using agricultural limestone you can—  
Increase the efficiency of manure and fertilizer.  
Help control plant diseases.  
Supply more food for plants.  
Supply minerals for livestock; thus improving your livestock.  
Improve the health of your family.

Agricultural limestone increases the value of your land. Agricultural limestone can be applied at anytime during the year with very little difference in results.

IMPORTANT! The analysis of your agricultural limestone will depend a lot on the results that you get from it. The analysis of our limestone rock is 95.14% calcium carbonate equivalent.

WE HAVE FACILITIES AVAILABLE FOR SPREADING AGRICULTURAL LIMESTONE WHEN DELIVERED. IF YOU HAVE YOUR OWN SPREADING EQUIPMENT WE CAN DUMP THE MATERIAL ON THE FARM.

PLACE YOUR ORDER NOW FOR SPRING DELIVERY OR FOR DELIVERY BETWEEN NOW AND SPRING.
