Your Garden

By John S. Gardner, University of Kentucky

As the season advances, the garden should be kept in a state of readiness for the coming year. The soil should be prepared for the next year's crop.

The soil should be prepared for the next year's crop. The soil should be prepared for the next year's crop.

The soil should be prepared for the next year's crop. The soil should be prepared for the next year's crop.

OUR FIGHT

Do you know what Soil Conservation Districts are? And what are we fighting for?

Almost 200 years ago, Americans in 13 colonies organized a revolution and fought King George III.

In World War I we fought the German Kaiser and Imperialism. Not long ago we fought Mussolini and Fascism. We fought Hitler and the Nazi idea.

Now we are fighting against the Communist aggression that threatens us from both the East and West.

From the beginning, Americans have fought for a great principle: the principle that free men can govern themselves successfully, without a dictator, king or father.

We have fought and are still fighting for personal liberty and dignity of the individual. We are determined that our families shall have the opportunity to live in peace and security, without threats of violence or fear of compulsion.

Our government is founded on the principle that we—all of us—together, have the spirit and the ability to decide for ourselves the actions we want to take together in our joint interest and common welfare. This is what we fight for. This is a representative self-government—the best government and the best society that men and women have ever enjoyed on Earth. This is the kind of government and society that offers the greatest advantages in personal liberties and the greatest opportunities for accomplishments.

This is the form, the spirit, and the practice of Soil Conservation Districts.

Free Men Can Govern Themselves

Americans have decided they want to protect their land and water resources. But there is no law in Washington who can order all the people to apply modern soil conservation measures.

Our organization is the Soil Conservation District—free, local, representative self-government in the best tradition of America.

The farmers of a Soil Conservation District decide for themselves what they want to do in their district about soil and water conservation, when they want to do it, where they want to do it, who they want to help them, and how they want to do it.

A Soil Conservation District is self-governed in watersheds, counties, and communities all over the country.

The Soil Conservation District is American self-government.

And the right to continue American self-government is one of the great rights for which we work and fight and sacrifice. It is one of the rights Americans have died for in the past and now, again, are defending with their lives and all their resources.

Free Men Can Organize

A Soil Conservation District is organized by the citizens of a county or community under the provisions of State law. It is a subdivision of the State government. But the Soil Conservation District is not directed by the Governor, the State Legislature, or any agency of State government. And it is not directed by the Federal government in any way.

The First National Bank

Necessarily a part of good soil conservation practices is the cultivation of tobacco on contour with a broad terrace. This terrace is used to conserve moisture and control erosion.

Another improvement in raising stock is the use of the Cow-Calf Plan. This plan is now being carried out in Nicholas County.
