Mulches Useful On Garden Crops

The use of such garden mulches as straw, dried lawn clippings and leaves is advocated by vegetable-growing specialists at the University of Kentucky. They help to save moisture and hold down weeds. They also save labor in cultivation.

A mulch is especially helpful around tomatoes, cucumbers and squash to keep the fruit off the ground. It helps to keep the fruit clean and cuts down losses from rotting. After the mulch has settled down, it should be about two inches deep. A mulch that is too deep or too thick will absorb and hold the water from any light rain before it reaches the soil, thus making a water shortage more serious, it was stated.
