on U.S. Highway No. 41
POST TIME: 2:00 P.M. C.D.T.
NO CHARGE FOR PARKING
JAMES G. ELLIS PARK
Owned by Dade Park Jockey Club, Inc.

TOP PERFORMANCE!
Shell test crew reveals five ways to test your car for top performance—and how the 9 ingredients in today's Super Shell can help you get it

1. Did your car accelerate smoothly—with no faltering, no bogging down?
2. Do you have plenty of power to gear?
If you feel you've "run out of engine," it's time to do something about it.
Super Shell has the answer. It contains "TCP" to help restore power lost to combustion chamber deposits.
And another Super Shell ingredient, called Platform, contains components that release 11 per cent more energy than even the finest of 100-octane aviation gasolines.

Test #4: Knock
Accelerate up a long, steep hill and listen carefully. If you hear a sound like marbles falling into an empty tin, you've got knock. It could cause engine trouble no chances. Switch to Super Shell. Its formula includes no less than three ingredients to fight the various causes of knock.

Test #5: Miles per gallon
Don't guess your fuel gauge when you measure miles per gallon. Make these three simple steps and be sure:
1. Start your test by filling your tank. Make sure the gauge comes up to the brim. Wipe down your mileage reading.
2. Drive in your normal manner for at least three tankfuls—

Test #1: Quick starting
Count the seconds it takes to start your car. The engine should "snap to" in about two to three seconds. A slow start shows your battery. And it may flood your cylinders, causing performance troubles.
If your engine is healthy, you should start in about 10 to 15 seconds. If it takes more than 15 seconds, you may have a problem. Now ask yourself:

Test #2: Smooth running
Pay close attention to your engine in traffic.
Does it vibrate roughly when you accelerate or when you're idling? It seems to "bump" as you pull away, then filter and fade? This problem may be the wrong blend of gasoline.
In summer, for example, excessive heat can make winter grade gasoline bubble in the fuel line. Bubbles can interfere with the fuel, causing rough running.
Shell scientists don't let that happen with Super Shell. When Super Shell's 9 ingredients combine to give it the correct volatility for smooth summer driving.

Test #3: Reserve power
On a turnpike, in light traffic, with your engine in healthy, normal running condition, you should be able to hold 45 to 55 miles an hour in the legal fifty mph zone for at least 10 minutes. Now ask yourself:

Test #6: Mileage between oil changes
Super Shell's 9 ingredients help keep your engine clean. They also help keep your oil clean. That means you can go longer between oil changes. Super Shell's 9 ingredients help keep your engine clean. They also help keep your oil clean. That means you can go longer between oil changes.

Test #7: Mileage between oil changes
Super Shell's 9 ingredients help keep your engine clean. They also help keep your oil clean. That means you can go longer between oil changes. Super Shell's 9 ingredients help keep your engine clean. They also help keep your oil clean. That means you can go longer between oil changes.

Test #8: Mileage between oil changes

Tuesday Aug. 1
at the
Carlisle Stock Yards
All Buyers Will Be present
Give us a try. We will treat you so many ways you are bound to like some of them.
LESTER GREEN

Shell experts use for knock by accelerating up steep grade. In another test, that "fish wheel" in the back is lowered onto the road to measure mileage precisely.
