A Tribute

In a course of a lifetime in any community many people come and go. Many of them live their stay in our midst with out adding to or subtracting from the life of the community.

Occasionally a few leave a notable contribution which are remembered long after the people themselves have been forgotten. Rarely do we get one who will leave not only a contribution but also whose name is remembered equally as well in his work.

For nineteen years, W. T. Straw and his wife, Inez, have lived as model citizens in Nicholas County. Here all of their children were born except one, and they have lived long enough to see their two oldest sons graduate from high school and enter college. Bill Straw has made an excellent and enviable record as the County Agent of Nicholas County. Inez Straw typifies the perfect housewife and mother of four children who has managed her home well and been a constant help mate and companion to her husband. Jointly they have added to the spiritual wealth of our community.

Perhaps the most unforgettable characteristic for which they will always be remembered has been the participation which they have literally thrown themselves into in their endeavors. So see that their adopted home of Nicholas County should be improved 37 somehow or other either one or both of them have helped in every known activity in the community and the final culmination of these efforts have been the part they have played in making the new Lake Project in Nicholas County and its outer lake for 4-H young people a live reality. So not only will the recreational facilities made to their community long be remembered but also the themselves will likewise long be remembered.

Let us pay tribute to W. T. Straw and Inez Straw which has really been a fitting one. We deeply regret to see them depart as we wish them every good success in his new assignment and wherever they may go.

Continued

20 & 40 YEARS AGO—

Thursday, July 2, 1942

For the first time in many weeks there was no one in the Nicholas county jail yesterday, the situation causing Jailer Tom William Owings to declare that he was 'lonesome' but that he appreciated the fact that 'no body wants to come to visit with me if they can help it'.

Despite the coming holidays tanks continued to run in strong fashion on the Farmers Stock Yards, Tuesday, and a total of 1,278 head were shipped out of at the regular weekly auction.

Although more than forty thousand pounds have been collected in Nicholas county during the scrap rubber drive members of the Petroleum Committee, which is leading the campaign, said this week that there is 'still a lot of rubber which we haven't gotten.' The drive slated to end July 1, was extended ten days by order by President Roosevelt.

MARRIED — Miss Nona Dotson and Mr Charles Hamm were united in marriage Saturday, June 27, at the home of her grandmother, Mrs. Sallie Dotson on Pleasant Valley.

BIRTH — Thomas S. Brambletti 61 at 7:30 last Wednesday night at the home of Dr. Frank Robbins, in Mt. Sterling. H. F. Hamilton, 24, of RFD 2, was born to a son born Saturday at the Lexington Clinic to A. B. Hamm, mother of Mrs. Albert T. Gardner, of Carlisle, in City, consult at 5:30 o'clock Sunday morning. Mrs. Lucy Clarke Ingels, 82, widow of Frank Ingels, Monday morning at the home of her son, Reese Ingels, in Millersburg. — Short burial services were held Sunday afternoon in the Carlisle cemetery for the infant daughter of Mr. and Mrs. James Martin, of Lexington. Mrs. Martin was formerly Miss Virginia Ross, daughter of Mr. and Mrs. Charles Ross of North Street.

Thursday, July 7, 1922

The regular monthly meeting of the city council was held Monday night. The ordinance was adopted making a penalty for violation of the Prohibition laws. Nothing else of importance was before the body only routine business being transacted.

While coming to town Tuesday afternoon J. F. Ecord found a bird closely resembling a bat, which was quite a curiosity. On the breast of the bird was a pouch containing three young birds. The pouch or sack was not unlike that of an opposum.

A LITTLE YAPPIN'

By Nellie Crump

From the Pages of Time.

Years passed and she had to return home to care for her aged parents also in time passed away. Elizabeth became known as 'Miss Lizzie' and many from know she was one among the first telephone operators when Carlisle had her exchange.

Having an invalid sister to care for Miss Lizzie has seldom been in town for several years, however, quite frequently some warning finds the one of those seldom visits in being months ago we walked together down Main and in at the Depot to see Miss Lizzie's friend and escort to call for our friend. Miss Lizzie was not there.

Abie's Irish Rose

Nothing pleases me more than old friends calling to see me. I'm one. This is especially true when some men and women come who have spent most or less time at the printing trade or plants where I have lived for 47 years. Albert Tyler of Beautiful Utah only ten minutes from Salt Lake city, formerly of Carlisle was just such a caller Friday. He was accompanied by his wife, a native of County Cork, Ireland their three daughters and a son.

Albert, better known as 'Abie' to old Carlisle friends and schoolmates was a teenage boy south wanting a job after school hours. He worked for sometime as The Mercury printers devil. Then Uncle Sam heard about him and that was that coming in close contact with many people are bitten by rabid animals and as a result, have to take anti-rabies treatments. all because they tried to frighten a wild animal or attempt to dig off the porch or out of a chicken house or who You just can't afford to take a chance.

What is That Enables Boys and Girls to:

Learn how to get along with other people develop personality and character, gain training in leadership. Make new friends learn to take responsibility, understand and appreciate nature, have a wonderful lot of fun, learn to be tolerant of others, grow spiritually, learn new skills, put into practice what has been taught in homes churches, 4-H Clubs and elsewhere.

Can any one experience teach boys and girls all of these worth while things? Those who know about 4-H Club Camps feel they have the answer and the answer is yes. Boys and girls get a full measure of all of these things on the Ky. 4-H Camps. More than six thousand boys and girls have this 4-H camping experience each summer in Kentucky. If you haven't been to camp but have to be denied because of lack of faith, you can join the almighty to help more Kentucky boys and girls have this wonderful train ing!

Does Your Power Mower Leave the Cut Grass in Bunches?

Often we see 'globs' or 'fluffs' or bunches of cut grass on lawns that have just been mowed with a rotary power mower. These are usually caused by running the mower too fast, especially in tall grass. What happens is that the cut grass can't escape fast enough from under cover by the mower. It is held under the cover and the fast revolving blades just grind it into a pulp. Finally, an accumulation is blown out in a bunch. Try sharpening the blade and slowing down. Also wait to fight. Just one little mower, especially in tall grass, and you will find it may destroy you or one of your family or some of better. Remember the motor should run more slowly in tall grass.

With Rabies, It's Better to be Safe Than Sorry

Rabies is never curable. It is always leads to a horrible death. If you investigate a ruckus in the henhouse and find a fox, skunk or raccoon or an unknown dog, it'll pay you to be extreme ly careful. The natural thing for that animal to slink away when you come on the scene but if he has rabies, he may stay and act friendly or he may wait to fight. Just one little mouthful of his saliva is enough to kill one of your family or some of your livestock. Never try to handle them but shoot them.

Plastic Pipes May

Many types of plastic pipes are being used by farmers today and some are health hazards. Not all are safe for use in farm and home water systems. Plastic pipes approved for safe usage are stamped with the letters N.S.F. about every foot along the length of the pipe. These letters N.S.F. show that the pipe has been tested for home water systems by the National Sanitation Foundation and the pipes are O.K.

Wash-and-Wear Fabrics May be Placed into Three Groups:

Fabrics woven or knitted from yarns made of 100 per cent man-made fibers. They include nylon, Dacron and Kodel polyester, Orlon and Acrilan acrylic fibers among others. Wash and-Wear properties are practically permanent.

Fabrics woven or knitted of yarns made of blends or combinations of fibers. Man-made fibers are often blended or combined with each other or with cotton or rayon.

Fabrics made by treating cotton, linen and rayon fabrics with a chemical finish. Such finishes are durable.

One definition of wash-and-wear garments is: "A garment which can be washed, dried and worn again, with little or no ironing, dependent on personal preferences. Most of these can be machine-washed and -machine-dried, but some require drip-drying (this is a broad definition which would cover all types of wash-and-wear fabrics.

Another set of terms used to describe wash-and-wear fabrics follows:

Needs No Ironing: The garment requires no ironing whatever throughout its wearable life.

Needs Little or No Ironing: The garment may sometimes be worn without ironing; but for an immaculate bandbox appearance, it must be touched up with a warm iron.

Needs Only Touch-Up Ironing: Garment usually requires touching up at seams, lapels, collar, and cuffs.

Automatic Wash-and-Wear: These garments can be washed and dried repeatedly in an automatic washer and dryer (or combination); and need—at most—only a touch-up before you wear them.

The terms easy-care, minimum care, and drip-dry are sometimes used to describe wash-and-wear fabrics.

Personal standards vary with individuals. A fabric which 'needs no ironing' for one person might require 'touch-up ironing' or 'complete pressing' to meet the standards of another. A garment's use may also determine the amount of care required. Pajamas do not require the same amount of care as a dress or blouse. These questions must be answered by the individual. In addition, the consumer's use of the garment must be considered. Performance of wash-and-wear fabrics is based on content, special finishes, and fabric construction.

Rotary Power Mowers

The little rotary power mower is a wonderful job but are dangerous as well. A normal speed of about two thousand revolutions per minute, the tip of the blade on a 20-inch mower is traveling about 120 miles per hour. Think what would happen if the blade picked up a rock or piece of metal or even a piece of wood and slammed it through your flesh.

And now about speed. Most people run the mower entirely too fast and the machine lasts only 2 or 3 years instead of the 10 years it should last. Why do people run these mowers so fast? Often they speed them up because the blade is so dull it won't cut and the only hope of getting the job done is to run the mower fast enough to beat the grass off. The blade should be sharpened at least once each year and several times if the mower has considerable use.

After each use, clean out grass that has caked under the mower and wash the mower down with a garden hose. Washing prevents water and acids in the caked grass from rusting and corroding the bottom surface of the mower which may cause the motor to fall off. Finally, always disconnect the spark plug wire as soon as the job is done. Remember the hand or foot that gets slipped off may be your own favorite member.

Controlling Flies

The Dairy Barn

A good program of fly control includes sanitation, frequent removal of manure, screening, destruction of fly breeding stops. Remember the chemical control measures. The use of chemicals alone will not solve the problem. Chemicals alone will kill a lot of flies, but if the breeding places are not cleaned up, there will be plenty of flies left to quickly repopulate the area and the problem is not solved.

Cooking Beef With Added Enzymes

Some people use tenderizing enzymes on beef. These are bromelin, ficin and papain. Papain, made from the papaya plant is the one you will find most often. It is used under various trade names. Cooking meat treated with a tenderizing en-

State Checks Trucks for Safety

Inspectors of the Kentucky Department of Motor Transportation, the State's regulatory authority for all forms of highway motor transport, maintain a continuous check on the safety and operating authority of all trucks, buses and taxis using Kentucky highways.

As shown in these photos, DMT inspectors check a truck's weight and mechanical condition as well as its compliance with all State and Federal insurance and licensing requirements. The check includes 25 safety points on the tractor and 18 on the trailer.

The 45-man Motor Transportation field force maintains 10 permanent truck weighing stations in the state plus several portable scales such as those shown here. Any safety violation discovered brings a mandatory repair order or, in the case of a major violation, a court citation for the owner. In cases where a real safety hazard is found, the truck is detained on the spot until repairs can be made.

INSPECTORS explain the operation of portable scales to the truck driver before beginning inspection. Overweight trucks are a dangerous traffic hazard and cause extensive road damage. Checks are held on Interstate-64 west of Frankfort. A complete safety inspection on a big truck takes a three-man team of inspectors 30 to 45 minutes.

AIR HOSE connections for truck's brakes between cab and trailer are checked (below) by Inspector Paul Stivers.

INSPECTOR Joe Gunnell adjusts portable scale which records truck's weight on each axle. The State Department of Motor Transportation held 2,019 safety inspections in 1961.

Must Parents Like Daughter's Boyfriend?

FOR AND ABOUT TEENAGERS

By C. D. Smith

THE WEEK'S LETTER: "I am 16 years old. My parents don't allow me to go on set dates with boys. They only allow me to go to the theater with certain boys. They are afraid that I will get a bad name. I am very popular with boys. There is only one boy I really care for. The problem is that my mother doesn't like him. I do not know how come the Vice family moved to Utah about this time. I moved to Berea and last track of Abie.

A week ago Mayor Power told me that Abie had asked him if I were still around. If so happen that I live near Joanna Vice Wills (Mrs. Malcolm) Abie's sister, whom the Utah family was visiting. They were on the return trip from Washington, D.C. where they had been especially to see the Capitol of the U.S.A. and other points of interest. They spoke of visiting Miss Vice another Carlisle boy, and family in Dayton, Ohio.

When I asked Abe if he had stuck with the printing trade, he smiled, shook his head and said proudly: No. I am a professional hairdresser. I cut, wash and dye hair and give permanents. Now listen here, all you females — old, young and in between — there is no hope for 'light out' after him, thinking you can catch him. It takes only three days to make him look like Utah border and across of the Vice family left Carlisle a week ago tomorrow. Besides — found that on one family are enough for any hairdresser to take care of.

One more thing—hear in mind, the attractive wife and best and most popular operators in the telephone business. It ta' Don't say you weren't warn ed. I'm tellin' ya.

— Yap

Neighborhood Gleanings.

Mr. and Mrs. Cray Marshall were in Louisville on business one day last week.

Mrs. Bertha Baker Crump of Indianapolis, Ind., who was en route to Tennessee for a visit, was the overnight guest of her sister, Mrs. Ruby George, and Carol Friday night. She called on neighbors.

Have you had your Black berry Festival cobbler 'fix' yet? If not, how 'bout it? A small one just went. Several neighbors now had them. It has been said a gal can be taken out of the country but you can never get the country out of her. anyway there is nothing better than a big juicy blackberry cobbler.

— Yap.

Washington Reports

BY YOUR CONGRESSMAN

JOHN WATTS

"Don't Give Up The Ship"

The famous naval command, "Don't give up the ship", revered by all members of the United States Navy, was issued Presidents. This week, President by young Captain Jim Lawrence in a naval battle during the War of 1812 which began one-hundred-fifty years ago this June. It was in the War of 1812 that the struggling young America, armed with a mere 16 men-of-war ships engaged the mammoth Royal British Navy, the ruling monarch of the seas, and through the skill of five American naval captains challenged five British commanders and shattered them into submission. Thus these men established the United States naval prestige in the world.

Special Naval Exhibit Opened

The lure of the adventure and romance of the sea has always appealed to man. This has been especially true for some of our Presidents. This week, President Kennedy, an old Navy man himself, opened an exhibit of prints and water colors arranged as the suggestion of President Kennedy who said he had first read of the unusual collection about a year ago. In opening the exhibit, President Kennedy stated that "the collection is an important part of our life at sea" and highlights America's naval history as 'one of the most exciting threads that runs through American history."

Greater Air Safety

New detailed safety regulations for increased safety in air plane passenger cabins are now being considered by the Federal Aviation Agency. The proposed new regulations under study would be aimed at rapid evacuation of aircraft in the event of an emergency.

The FAA would like all occupants of a plane to be able to get out in two minutes or less in the event of an emergency. The FFA suggested regulations would hope to accomplish this. One of the proposals would require each plane to be equipped with two portable battery powered megaphones, located in the front and rear of the plane, to be used to direct evacuation. Ropes long enough to reach the ground over the wing from the nearby emergency exits also would be made mandatory. The marking, size, color, and location of exit doors and emergency windows escape hatches would be carefully regulated. Also lighted overhead signs pointing to the overwing exit areas would be required.

Another of the proposals being considered would require the pilot to alert passengers by announcing on the public address system each time a take-off or landing is made.

This study now being made by the Federal Aviation Agency is one more example of how your Government is constantly aware of its responsibility to maintain and protect the public health and welfare.

Long range highway plans stressed by Kentucky Council

Three members of the Kentucky Government Council, a statewide citizens group commitmented to effecting significant improvements in Kentucky governmental affairs, represented the Council's resolution on highway planning to J. C. Cobb, tent with the U. S. Bureau of Public Roads' settled policy for the most efficient development of highway transportation nationally and for the state of Kentucky.

The Kentucky Government Council intends to solicit the of endorsement of its resolution by all candidates for Governor and Lieutenant Governor.

TOURING SCENIC KENTUCKY

THE KENTUCKY BUILDING . . . WESTERN KENTUCKY STATE COLLEGE CAMPUS

By Marty Lovelace

Bowling Green Kentucky, located on the campus of Western Kentucky State College now stands, was where General Johnson commanded all Confederate troops west of the Allegheny Mountains, from November 1, 1861, when Bowling Green was first occupied, until February 14, 1862, when it was evacuated. For four months, Bowling Green was the Confederate Capital of Kentucky.

Trenches dug by the defenders of the fort now serve as campus walkways, and a stroll down one of these walkways will lead one to the beauti-

ful Kentucky Building . . . which houses the Kentucky Library and Museum.

It has become an important tourist attraction as well as an excellent source of information for people of the entire nation. The Kentucky Building houses some 20,000 volumes of Kentucky pertaining to our state. Other than the books, the collection of rare items, old glass and china, antiques, portraits, and articles of costume. It houses hundreds of mounted specimens of wild life and insects, and a unique collection of birds' nests and kiana information, forming one of the largest collections devo- several thousands of visitors ed to all fields of knowledge through the Kentucky Building.

Today's Thought

The short period of life is long enough for living well and honourably. Cicero 106-43 B.C.

FARM and HOME (Continued from page 2)

zyme too short a time will cause the meat to be long pulpy. Read and follow the manufacturer's directions for using the tenderizing enzymes.

Profen beef is patented process in a new kind of beef on the market This beef is from animals that have been treated before slaughter with an injection of papain. This tenderization method produces

1 A more uniformly tender meat.

2 More cuts that can be cooked by dry heat methods.

3 A shorter cooking time for any cuts.

The method does not affect wholesomeness, appearance or food value of lean meat. The process has been approved by the Meat Inspection Division of the U.S.D.A.

Many of the cuts of ProTen beef will be boneless. Some of these boneless cuts will be called new names. The name of the cut will indicate how to cook it. Cook these cuts to the same internal temperature as the regular cuts of beef.
