PHONING WHILE FLYING. There may soon be a new

dimension to the nation's telephone system—customers us-ing telephones while flying will be able to talk across the

This new service had its beginning in 1957 when two ex-perimental ground station—one in Chicago and another in Detroit—served a number of private planes and com-mercial airliners when they flew in this air corridor.

mercial artimers when they flew in this air corridor. The Federal Communications Commission is now con-sidering an A. T. & I. proposal for a nationside air-ground telephone service. This service will operate on six channels and ground stations will be added on a continual basis with national coverage, along the major airline routes, expected to be completed in 1964.

AN ELECTRONIC LARYNX de-veloped by the Bell System gives voices to people who have lost their power of speech. This device sub-stitutes for vocal cords in cases when the larynx has been removed
