THINGS HAVE COME A LONG WAY—Since the start of the dam core last August—above the completed dam, below the rigging of the dam core.

Major Provisions '64 Feed Grain Program

The 1964 feed grain program will be basically the same as the successful 1963 program. O. Wilson, Chairman, Agricultural Stabilization and Conservation State Committee, said today. The sign-up period for both fall- and spring-sown crops is planned for early 1964. As recommended by producers, the chairman pointed out, the Department of Agriculture has held change to the "fewest consistent with law and economic circumstances." The major change in next year's feed grain program is an increase in the top limit on diversion from an farm's base acreage with an increase in the rate of payment for maximum diversion. This is intended to encourage producers to divert additional feed grain acreage and to increase their income.

LET'S HOPE FOR A NET WINTER—And it will probably take a year or two to have the water lapping at the spillway dam opening for the 100 acre lake, two and one-half miles from the spillway, will be installed. When the picture was taken last week, workers were just installing a metal frame—will open the spillway opening presumably to keep debris from entering.

Overturn and the non-lump sum part of the price support will again be made in the form of negotiable certificates with which the producer may receive grain from CCC stocks or cash at the ASC County Office if he wishes CCC to help in marketing the certificates. As in the past, eligibility for payments and price support will be conditional upon maintenance of normal average (1959-60 average) price-support levels in 1964 will be the same as in 1963, but a slightly larger proportion of the support will be made available through loans. For the feed grains covered by the program, the loan rate, feed payment, and total national average support are, respectively: Corn (per bu.) \$1.10, 15 cents; \$1.25; barley (per bu.) 85 cents, 12 cents; 98 cents; grain sorghum (per cwt.) \$1.77, 23 cents; \$2.

NOTICE TO FARMERS & LIVESTOCK OWNERS
Effective August 11 we are discontinuing our dead animal collection service in this area. It is with deep regret that we are forced to discontinue it. Due to the declining market on hides we have no other choice.
It has been a pleasure serving the farmers and livestock owners these past twenty years. I want to thank everyone we have had the privilege to serve and the people we have been associated with.

Farmers... Read How the Best Seed Costs You Less

How do you measure the value of seeds? The surest way is in terms of what they will produce for you, the amount of hay or grain you get by planting them. The best seeds you can buy always cost you less in the long run because the best seeds—such as Southern States quality Seeds—yield more tons of hay or more bushels of grain in relation to their price. When quality seeds are your best buy, why settle for less?

For example, many farmers still plant home-grown seeds or buy seeds from their neighbors. In many instances these seeds are not cleaned, not treated and not tagged. Often even the variety is questionable. These seeds could be the most expensive seeds in the world. Result: thin stands, weed-choked fields, disease losses, low yields, poor returns. Can you afford to take a chance on seed quality?

This year plant the seeds you can afford—Southern States quality Seeds. Get thick stands, disease protection, high yields and maximum returns. If the best costs less, why not travel first class? Phone or visit your Southern States Cooperative Agency now.
