

# Stays Very Much Alive

"Nothing is as dead as yesterday's newspaper." That old adage is not true and it never was true, but because it sounds cute and has a twist, it has lived through the years. In truth, nothing is as alive as yesterday's newspaper to someone who hasn't read it. The newspaper does not enter or leave the home with the speed of light. It hangs around until every member of the family has read it. Sometimes for weeks.

Watch that newspaper in your home. Notice that every time anyone picks it up the newspaper is new. Another thing, the whole family doesn't need to be present at any one time to enjoy their newspaper. Dozens of obstructions and delays may interfere with a person's newspaper reading. You may be called to the phone when it is delivered, sister may be studying, brother may be practicing ball, pop may be attending an important meeting, but the newspaper is waiting.

ing—brand new—until each person has an opportunity to read it. It makes no difference what a member of the family may be doing. The newspaper reports to each individually. Each time one of them picks up the paper to read it, it is fresh, new and interesting to them. No matter how many people have read it before, the newspaper is alive to the person about to read it.

If you don't agree with statements carried in your newspaper, you can usually present your views. All it takes, in most cases, is a signed "Letter to the Editor." The events and happenings in your town and area are duly reported, printed and preserved for posterity in your newspaper. Nothing is more alive than any newspaper that is waiting to be read. You make no date with your newspaper. It stays alive for a day—or a week. It is alive until you find time to read it.

**Winter Storage of Vegetables**  
Just before frost threatens, put into storage the vegetables that are worth storing. Some only sound vegetables are left to rot in the ground, while others are almost sure to shrivel; those that are over-ripe may spoil. Infected wounds, diseased spots, and bruises from rough handling often are starting points for complete decay. No matter how good the storage room, as with the vegetables are harvested, those with stem blights can be sorted out for immediate use and only the sound ones stored. Store in baskets or boxes, never in sacks. Only the hard shelled squash can be stored. Some of the pumpkins such as "Table Queen," "Large Cheese" and "Small Sugar" can be kept from harvest until the end of December if properly handled. Any dry place where the proper temperature can be maintained is suitable for the storage of squashes and pumpkins. They keep best when not piled on top of each other. A good method is to put them on shelves where they can be spread out in a single layer with a small amount of space between each one.
