

### how limestone helps keep your farm productive

- When you apply limestone to your farm land you accomplish several important things at one and the same time:
1. You replace the calcium and magnesium (lime) that have been lost through cropping, erosion, and leaching.
  2. The acid condition of your soil, that has developed as the result of the loss of lime, is corrected—that is, the soil is "sweetened."
  3. The activity of favorable bacteria is stimulated; the decay of organic matter, such as manure, straw, roots, and stubble, is hastened; and the nitrogen-forming processes are promoted.
  4. Other plant foods, especially phosphorus, are kept in more available form.
  5. Soil structure is improved; heavy clays and silts are made looser and easier to till.

Lime a part of your farm each year and make this operation a regular part of your farm program. The finest AGRICULTURAL LIMESTONE is now available at **BOURBON LIMESTONE CO.** PARIS, KENTUCKY PHONE 987-4425
