Mr. and Mrs. Baker to receive doctorates

Morehead, Ky.—Togetherness has been the theme of the educational careers of Tim and Isabel Baker, faculty members at Morehead State University.

Both will receive doctoral degrees May 12 in Oklahoma State University. Mr. Baker's doctorate is in vocational education and his wife's degree is in elementary education.

He is an associate professor of industrial education and she is an assistant professor of education.

This will not be their first commencement together. They received bachelor's degrees from Northeastern State College in their hometown of Tahlequah, Okla., on the same day in 1950.

The Bakers began work on master's degrees at the same time but Mrs. Baker's study was interrupted by the birth of one of their three sons. She finished the degree a year after her husband.

Before coming to MSU in 1966, Mrs. Baker taught 14 years in the same school system and all but three years were in the same building. They taught in Tahlequah, which, according to Baker, is the capital of the Cherokee In-

When Baker received an Education Professions Development Act grant in 1967 to pursue doctoral study, all five members of his family were in college at the same time.

"It seems that we have always done everything together," he said Mrs. Baker, who appropriately, met her husband in college.

"Since we were both studying long hours, we understood each other's problems," she added.

"Mrs. Baker teaches reading courses and supervises student teachers in elementary education. She served one year as acting director of the reading center at MSU.

"The Bakers plan to continue their careers in education-together, at Morehead State.

Low care lawns can still be beautiful

If you are one of the millions of homeowners who feel he spends more time with the lawn than with the family, create a low care lawn. Lawns don't really require a great deal of time to keep them eye-catching, green and trim. In the first place, grass is really Nature has conditioned grass to grow even where nobody tends it and the grass does quite well without the pampering. There are a few easy ways to tend lawns

and they can be listed in a reasonably short narrative.

1. Fertilize your lawn with 10 to 20 pounds of balanced fertilizer per 1,000 square feet in the early spring, before the grass gets too hot and the rains have stopped.
2. Don't cut the grass too short. Use one half to two inches in a good standard height to keep a lawn looking its best.
3. Low cutting often removes the leaves from the grass stem and gives a lawn the yellow cast, terribly hard on grass to recover from such a scalping. Do not mow with a mower set in late spring. The weather should be warm, but not excessively hot for grass to work best.
4. Overseed your lawn with three
