MRS. STEWART MOORE
Mrs. Dorothy Mae Moore, 61, wife of Stewart Moore, died Wednesday, Dec. 25, 1972 after a long illness.

She was a native of Nicholas county, a daughter of the late Charles and Lucy Eaton Cameron.

Other survivors besides her husband are: daughters, Mrs. Donald Henry, Carlisle; Mrs. Ronald Haney, Paris; one sister, Mrs. Willie Swartz, Camarillo, Calif.; four grandchildren.

Funeral services were conducted Friday from the Mathers-Shearer Chapel by Rev. Richard Chamberlin and Rev. Duke Payne. Burial in the Carlisle Cemetery.

pallbearers: George Dale, Willard Tulliver, H.E. Cox, Paul Smoot, Urban Feack, Bobby Crockett.

DAVID H. BOOTH
David H. Booth, 65, died at 4 p.m. Thursday, Dec. 26, 1972 in the Nicholas County Hospital after a long illness. He was a native of Nicholas county, a member of the Carlisle United Methodist Church and had been associated with Sheeler Lumber Company, Paris, for 21 years prior to his retirement.

He is survived by his wife, Mrs. Beatrice Jacobs Booth, one son, Kimball Booth, Carlisle; one step-son, Gerald H. Barlow, Oystertown; two sisters, Mrs. Ethel Reed, Carlisle; Mrs. Ruth Dalby, Paris; one brother, Eugene Booth, Nicholas county; one uncle, Dawes T. McCracken Sr., Paris; six granddaughters; one grandson; two great-grandchildren.

Funeral services were held at 2:30 p.m. Sunday at the Mathers-Shearer Chapel, conducted by Rev. Richard Chamberlin. Burial in the Carlisle Cemetery.

pallbearers were Damon Booth, Jimmy Ellington, Kenneth and Reese Wayne Smoot, Durward Curtis and Wayne Berry.

Grant given to restore Farmington log cabin

by JED NEACE
FRANKFORT—The Kentucky Heritage Commission recently announced that Historic Nicholas county, Inc. has received a \$67,000 grant from the National Parks Service to restore the Farmington log house in Louisville. The log house is the type in which John and Lucy Speed lived while the Farmington mansion was under construction in the early 1800s.

Edgar Archer, executive director of Historic Homes Foundation, Inc., described the log house as having two rooms connected by a dog trot. The house has wooden floors and a central space in the attic. "The Historic Homes Foundation is matching the National Parks Service grant," said Archer. "The logs in the house are in pretty bad shape and many need to be replaced. We also need to replace the mortar and re-align the stones in the chimney."

Archer continued, "We are going to have to research the type of mortar broken down. Nineteen represented 121,178 tons; Phosphate, 107,864 tons; and Peaback, 64,400 tons. In other states and Puerto Rico increased their use of plant nutrients, 14 states decreased, and five states used about the same amount. Also, according to domestic supply, this year potash from Kentucky during fiscal year 1974 was up about 24 percent. Nationally, total plant nutrients usage was up seven percent.

Outlook for U.S. supplies of the three plant nutrients for the coming fertilizer year ending June 30, 1973, are expected to total about 23 million tons. This figure is up 1.8 million tons over the total for the year ending June 30, 1972. Supply prospects for the three types are:

Nitrogen—for domestic use probably will be about 10.8 million tons, eight percent higher than the 1972-73 fertilizer year. This increase could be reduced or even wiped out if severe weather forces curtailment of natural gas. Natural gas is the source of hydrogen for making ammonia. Nitrogen will be tight to short through 1977.

Phosphate—is expected to be about 1.8 million tons, also eight percent higher than for the last fertilizer year. This amount could be reduced somewhat if there are delays in building new manufacturing plants. Phosphate will be tight to short through 1976.

Peaback—should be about 6.3 million tons, 16 percent more than last year. During the 1972-73 fertilizer year, Canada supplied 72 percent of our net domestic supply. This year potash from Canada is expected to be up another eight percent, but total U.S. supplies also will be tight to short through 1976.

According to Mr. Niederrecker, the sale of a taxpayer donated to a church, rummage sale or electrical appliances gives the local emergency relief fund last summer are apt to be long forgotten, although these items can be claimed as tax deductions at the fair market value.

Assuming Mr. Niederrecker has convinced you to get started now with your taxes, how do you proceed? These are the steps he recommends.

First, get out a copy of your last year's return to make sure all seven recurring deductions are being overlooked.

Next, go through the cancelled checks, picking out those which substantiate medical, interest payments, mortgage costs, etc.

Then, put on your thinking cap and see if you have missed any legitimate deductions to which you might be entitled. As part of your medical expenses, for example, you can deduct the cost of transportation to and from a doctor's office, by either private vehicle, subway, bus or taxi.

Some taxpayers may not be sure just how many times they visit a doctor, a dentist, a clinic. Now is a good time to call up their effort.

Also, many late, hurried filers often overlook such deductible items as eyeglasses and batteries for hearing aids.

As a matter of fact, if you are paying of a large medical bill in installments, consider making a large payment in December if it will push your medical expenses to over three percent of adjusted gross income. In some instances, it might pay to borrow the money.

Aside from medical expenses, there are many other deductions that are commonly overlooked by the hurried taxpayer. For example, if you take a job-related college course after January 1, you can deduct the cost of travel from your job to the classroom.

When used to raise income-producing property (stocks, bonds, etc.), rent on a self-deposit box may be deductible. Legal expenses that are a necessary factor in producing taxable income are normally deductible. So, too, are union dues and dues to professional societies.

Fertilizer outlook in Kentucky up

During fiscal year which ended June 30, 1974, 966,407 tons of fertilizer were used in the State of Kentucky. This is an increase of seven percent over fiscal year 1972. The outlook for U.S. supplies is up but will be tight for 1974-75, so states Paul E. Hall, CDD, Nicholas County Agricultural Stabilization and Conservation Service.

Use of the three main plant nutrients used in Kentucky fertilizers during fiscal year 1974 totaled 356,231 tons. Broken down, Nitrogen represented 121,178 tons; Phosphate, 107,864 tons; and Peaback, 64,400 tons. In other states and Puerto Rico increased their use of plant nutrients, 14 states decreased, and five states used about the same amount. Also, according to domestic supply, this year potash from Kentucky during fiscal year 1974 was up about 24 percent. Nationally, total plant nutrients usage was up seven percent.

Local hospital's liability insurance in jeopardy

Nicholas County Hospital was one of 23 hospitals in the state to have their liability insurance canceled by the Argonne Insurance Co., which provides a statewide group liability program. The hospital is owned by the Telebyte Corp.

The action was a result of the Argonne financial position, especially its deteriorating ratio between premiums written and policy-holder surplus.

Nicholas County Hospital Administrator Jerry Morris said Saturday that the local hospital will be covered with Argonne until Feb. 1. In the meantime, local insurance agents are trying to locate another liability insurance company. Also, the Kentucky Hospital Association is working on the same problem. Morris stated that hopefully by Feb. 1 another company can be located to insure the local hospital.

Orientation to two candidates for the local hospital will be covered with Argonne until Feb. 1. In the meantime, local insurance agents are trying to locate another liability insurance company. Also, the Kentucky Hospital Association is working on the same problem. Morris stated that hopefully by Feb. 1 another company can be located to insure the local hospital.

NICHOLAS COUNTY SCHOOL CALENDAR
Jan. 2 Schools resume classes
March 13-14 Schools closed
Inauguration
April 8-11 Pre-school registration
April 14-16 Schools closed—Spring vacation
April 17, 18 KEA Conference
May 28 Professional day
Commencement.

Beef conference

A beef cattle conference has been planned to assist producers with feeding, herd health and breeding programs that will help them market a larger calf crop. The two day conference will be held at the Agricultural Science Center at Lexington, Jan. 16-17. The theme of the meeting is "Improving Reproductive Performance." This is extremely important during low feeder cattle prices. Several nationally known experts will join staff members of the University of Kentucky on the program. Nicholas county producers are urged to put these dates on the calendar and try to attend.

An early start on taxes can save

April 15th, the federal income tax filing deadline—a day of frenzied activity or just another day? The significance of the 15th depends on how organized taxpayers are, according to Mr. Paul Niederrecker, District Director of Internal Revenue for Kentucky.

April 15 does not have to be a hectic day in any household," Mr. Niederrecker said, "especially when you consider that most of the time spent preparing an income tax return involves locating essential records. The actual completion of the form takes relatively little time."

As an important starting point, Mr. Niederrecker suggested that the taxpayer begin now to gather his records and list his deductions.

"Begin with January," he said, "and move forward toward the end of the year. Tally up such items as charitable contributions, medical expenses, taxes and interest payments. The advantage of starting this process now is that it

Water Temperature	Time to Exhaustion or Unconsciousness	Expected Time of Survival
32.5	15 min.	15 - 45 min.
32.5 - 40	15 - 30 min.	30 - 90 min.
40 - 50	30 - 60 min.	1 - 3 hours
50 - 60	1 - 2 hours	1 - 6 hours
60 - 70	2 - 7 hours	2 - 40 hours
70 - 80	3 - 12 hours	3 hours - indefinite

Kentucky Water Enforcement Administrator Doug Shoulters says that the above U.S. Coast Guard "Expectancy of Survival Chart" is a good reminder of the need to exercise caution when boating during the winter months. Falling into the water during the winter months is extremely dangerous because the colder water temperature cuts your survival time and the probability that you will be rescued.
