MRS. PAUL LOGAN
Mrs. Katherine Marie Logan, 56, 3044 Lywood Drive, Paris, died Wednesday, Oct. 8, 1975 at the Bourbon County Hospital. She was the wife of Paul Logan.

She was the daughter of the late Homer Ward and Ruth Jones Ward Paris, who survives. Educated in Nicholas county, she was a member of the First Christian Church.

Besides her husband and mother, she is survived by one daughter, Mrs. Charles F. McClain Jr., Paris; one son, Bradley Logan, Paris; two sisters, Mrs. Chester Mattox, Carlisle; and Mrs. Nathan Buckler Jr., Paris; four grandchildren.

Services were held at 10 a.m. Saturday, Oct. 11, 1975 at the Hutton-Turpin Funeral Home, Burial in Evergreen Memory Gardens.

Two more projects added to County road program

FRANKFORT—Gov. Julian Carroll has announced that the Nicholas county road aid program has been amended to add two more projects for this fiscal year.

According to Carroll, the newly approved projects will provide initial blacktop surfacing along one mile of Jackson Lane Road, beginning at Jordan Branch Road and extending south-southeast to the Bath county line, and for Mt. Carmel Road, beginning at KY 22 and extending northeast for .7 mile.

Funds for the additional work will come out of monies already allotted to the county for county road aid in the current fiscal year. That amount, as announced earlier, was \$5,175.

Carroll said all work necessary to complete both projects will be performed by the county. The state's Bureau of Highways will provide the materials.

Burley prospects above last year

Kentucky's burley tobacco production, forecast at 441.8 million pounds in 1975, is 3% above 1974 and 49% above the short 1973 crop. Potential output declined 2% from Sept. 1. Field is expected to average 230 pounds per acre compared with 245 for 1974, 209 for 1973 and 240 last month. During the past 10 years, final production has been above the Oct. 1 forecast six times and below four times. Burley was about 80% housed by Oct. 1. Some cut tobacco was in the field for almost a week of rain and drizzle. Houseburn is prevalent with damage to at least 1/3 of the housed crop. Severity has been light to moderate. Shorter than normal leaves and loss of lower leaves in field reduced potential yield.

For the Burley Belt (Kentucky and seven nearby states) production is expected to total 637.7 million pounds—up 4% from the 612.6 million produced in 1974. Yield for the Belt is expected to average 279 pounds—down 33 pounds from Sept. 1 and down from the 1974 yield of 245 pounds.

Senate committee sets busing hearings

WASHINGTON—The U.S. Department of Agriculture (USDA) has proposed three alternatives for revising food coupon allotments to comply with the decision of the United States Court of Appeals for the District of Columbia in the case of *Rowdy v. United States Department of Agriculture*. On June 12, 1975 the Court ruled that USDA failed to comply with the requirements of the Administrative Procedures Act in implementing the eligibility standards and allotments for all recipients to purchase a nutritionally adequate diet.

No change is proposed for the eligibility standards for public assistance or Supplemental Security Income (SSI) households. Three alternative proposals are proposed for determining eligibility for nonassistance households and for determining coupon allotments for all households:

—An individualized basis of determining coupon allotments which would take into consideration the sex and age of each household member. Each nonassistance household's eligibility standard would be set at the highest income level at which that household's coupon allotment equals or exceeds the purchase requirement.

—An individualized allotment schedule as above, except that eligibility standards for nonassistance household and coupon allotments for all household would be those currently in effect for households participating on Dec. 31, 1975 whose individualized eligibility

of public policy." Crawford said upward pressure on electricity rates could be substantially reduced if government were to...

—Unlock our nation's vast coal resources including deposits on federally owned lands. —Establish regulations that will permit utilities to burn our country's coal, subject to health-related air quality standards.

—Permit the burning of less pure, less expensive oil. —Expel offshore oil and gas development. —Modify government procedures to enable us to move more quickly toward the use of nuclear fuels for electric

power production. Panes and other speakers dealt with cost and price problems in food retailing and health care. The conference also heard a panel discussion on the dangers of automation in farm labor and public employment.

Recent polls have shown that very few school and college graduates, under-graduates, and the Administration take prompt action to reduce pressure on consumer charges for electricity.

Electric rates do not have to be as high as they are," said W. Donham Crawford, president of Edison Electric Institute. "Consumer fire should be directed toward the causes of higher prices. They are primarily in the area

Ky's watershed program thrives despite problems

FRANKFORT—The small watershed program may be ailing nationwide, but in Kentucky it is managing to survive despite time lags in implementation.

According to Stanley Head, director of the division of conservation in the Kentucky Department of Natural Resources and Environmental Protection, one problem involved in implementation of the federally-sponsored program "is the tremendous amount of planning and replanning. The bureaucratic red tape involved with the watershed projects slows things down. Besides an environmental impact statement for each project, various public hearings must also be held."

Speaking of a recent federal watershed review panel, Head indicated that the panel's findings show that too much time lags between the initial request and the actual construction and completion of the flood control projects nationwide, implementation time for a watershed averages eight years.

Citing another problem of securing easements and rights-of-way with climbing prices, Head said that the panel asked the federal government to "streamline its handling of the watershed projects. Less red tape would speed up project construction from beginning to end."

In their report, the panel also suggested that state governments become involved with the watershed

standard or allotment would be less than those currently in effect. If such a household dropped out of the food stamp program and subsequently reapplied, the individualized basis of determining eligibility standards for nonassistance households and coupon allotments for all households would be in use.

—USDA said that under the first proposal, many households currently receiving food stamps would lose benefits. Under the second proposal, the number of households receiving less benefits would be reduced. Under the third proposal, no household would receive less bonus coupons than it now receives.

Dr. James A. Noll attends two veterinarian meetings

Dr. James A. Noll, local veterinarian, recently attended two professional meetings. The Mid-America Veterinary Conference sponsored by the Kentucky Veterinary Medical Association met on Oct. 5-7 at the Ramada Inn-Birmingham Convention Center Complex in Louisville.

Dr. Noll went to sessions on Small Animal Orthopedics presented by Dr. Bruce Hobbs of Ohio State University; Equine Lameness by Drs. A.I. power production.

Panes and other speakers dealt with cost and price problems in food retailing and health care. The conference also heard a panel discussion on the dangers of automation in farm labor and public employment.

On Oct. 14, Dr. Noll participated in the meeting of the Buffalo Trace Veterinary Medical Association at the Rock Haven Restaurant in Nicholas county. The B.V.M.A., of which Dr. Noll is secretary, is an organization of about 20 veterinarians in Nicholas and surrounding counties. The evening's program consisted of a filmed presentation by Dr. Donald S. Laffore, Extension Veterinarian, University of Kentucky.

Davidson, Gary Lavin, and D.L. Proctor, Lexington and Louisville practitioners; and a number of sessions on management and treatment of diseases in cattle.

Mrs. Noll accompanied her husband to the Conference and attended the luncheon meeting of the K.V.M.A. Women's Auxiliary.
