She also showed samples of flowers she had made and arranged for gifts. The Headquarters Club will join other clubs in making the dessert for the hospital benefit dinner Friday, June 24 at Forest Retreat.

You can't cool the whole town!

More than half of all the space heating fuels used in America and about a third of all the electricity are used in our homes. That means that almost all of us can do something to save energy and save money at the same time.

More than half of the energy we use in our homes goes into heating and cooling. Nobody knows how much of that energy (and cost) is escaping into the great outdoors. The suspicion is that many of us are trying to heat the whole town or countryside. And that can't be done.

Airtightness is important if we are to keep the air that we cool in summer and heat in winter within our homes. We can do something about that. A poorly insulated home costs about 50% more to heat and cool than a properly insulated house. Think of that in dollars! Most of us probably can save $1 out of every $3 that we spend for heating and air conditioning.

We can save enough in about a year to match the cost of adding 6 inches of insulation in the attic. That amount is all savings from then on.

Contact your electric cooperative for information about insulation, caulking, weather stripping, storm doors and storm windows. Ask about the advantages of improving your home's airtightness during the summer rather than waiting for cold weather.
