Talk is Cheap?
American Telephone and Telegraph Co., the world's largest private corporation, recently was warned that one of its telephones would be disconnected if it did not pay an overdue bill of \$448.08 for telephones it had installed in a temporary office.
"We value you as a customer..." said the computer-written dunning notice from the Chesapeake and Potomac Telephone Co., one of 23 telephone companies owned by AT&T.
However, unless payment of \$448.08 is received, we will have to interrupt your service," the notice concluded.

Cover crops will help solve soil erosion problems
By William Halcomb
Cover crops will do much to solve some of our most critical erosion problems. Cropland left bare after cropping tobacco, silage corn, and corn during the summer will lose many tons of precious topsoil during the fall, winter, and early spring of the following year. This erosion is in two forms either gullies, sheet erosion, or both. In some cases a loss of one inch may take place each time cropped or even more. Considering most soil has only eight or 12 inches of top soil to start with, it doesn't take many years to be down to the subsoil. Scientists have estimated that it takes nature 700 years to form one inch of topsoil. Topsoil to plants is the same thing as blood is to animals. We can't stand to lose too much. Of the fertilizer put on crops each year about 60 per cent is used by the crop that year and about 40 percent of the fertilizer is left in the soil. This fertilizer is usually in the top six inches of the soil. That makes it important to keep that topsoil in place in the field. A good cover crop will help do that.
One of our greatest polluters today is soil erosion in our streams. A high percentage of this comes from our row crops. Since row crops are on the land from three to five months it is important to have a cover crop the other seven to nine months so that the land will lay bare. If the land is going from row crops back to hayland or pasture, now is an excellent time to get the crop seeded and it will act as a cover.
For early seeded cover crops you should consider Field Bromegrass about 30 lbs. or more per acre; Ky. 31 Fescue, 20 lbs. per acre; Rye Grass, 30 lbs. or more, consider the above if you can seed by Sept. 15. For later seeding of cover crop one will want to consider small grain at the rate of two bushels or more per acre. Rye would be the best of the small grains but some problems might develop in the spring if not turned early enough. When it is good but has no problems in the spring. A good cover crop will cut down on the erosion and also keep the fertilizer from leaching out of the soil.
If you don't have your cover crop seed get it the next time you are in town. Keep that soil at home.

Magnets can tell the difference
LEXINGTON - Potential aluminum recyclers may experience some difficulty in distinguishing an aluminum can from a steel can. But a very simple test with a magnet will show which is which.
A magnet will not stick to aluminum. But it will stick to the side of a steel can. Recyclers should take care to put the magnet on the side or bottom of the can. Most tops are aluminum, even on steel cans, and hence will not indicate

whether the body of the can is steel or aluminum.
Once the recycler has identified the aluminum cans, Reynolds Aluminum will buy them. Reynolds pays 17 cents per pound for aluminum beverage cans and other clean household aluminum items such as pie plates, foil, frozen food and dinner trays and put, pudding and meat containers.
Certain other items, including aluminum siding, gutters, storm door and window frames and lawn furniture tubing are also worth 13 cents a pound if they are free of all foreign materials, cut to lengths not exceeding three feet and should not be mixed with cans.
The Reynolds Aluminum recycling unit will make its regular visits to Lexington every Tuesday in September, except Sept. 9, from 11 to noon at Turfhand Mall on Harrodsburg Road.

Nicholas County fire chief Woolly Wilson reported that a fire destroyed a barn belonging to G. W. Seaton on Saturday, Aug. 19. Also listed as a loss from the fire was the sleeping room and its contents. The cause of the fire was unknown.

A Nicholas County player may have been stopped when this picture was taken - but the Purple couldn't keep up the pace for too long. The final score Friday's game: Nicholas 14, Madison 6. (Phillips photo).

Local football players recognized
The names and reputations of several Nicholas County athletes made the sports circle recently. Tim Ockerman, a Nicholas senior, and James Anderson also a senior at Nicholas County were listed on Eastern Kentucky's pre-season all-star football team for high school players. Tim weighs 170 lb., 6' 100 lbs; Kevin Gilkison, senior, 7 and 1/2 lbs. is 6' and plays fullback and centerback for the Jackets. James weighs 215 lbs. is 6'4" and plays guard and tackle.
Also honorably mentioned on the pre-season all-star football team were: Rudy Randolph, senior, C and T, Miller Lewis, said the company has deferred needed construction projects because of the company's financial situation. KU President William Becham said capital expenditures in July were reduced by \$60,000. The PSC also has under consideration a \$12.5 million emergency rate increase that is part of the \$25.9 million rate increase package. Testimony on the proposed emergency increase was presented to the PSC Aug. 2. KU was previously granted a rate increase request on March amounting to \$18 million. The company had requested a \$3 million increase.

Local football players recognized

FRANKFORT - A Kentucky Utilities (KU) official today told the Public Service Commission (PSC) that his company is heading for "financial disaster" unless the commission allows it to raise its rates.
John Newton, a KU senior vice president, made that statement during the PSC hearing on KU's request for a \$25.9 million rate increase.
"Our present rates cannot meet our financial requirements. The full \$25.9 million requested is the minimum required if the commission is to enable the company to earn a reasonable return," Newton testified.
Another KU senior vice president, Miller Lewis, said the company has deferred needed construction projects because of the company's financial situation. KU President William Becham said capital expenditures in July were reduced by \$60,000. The PSC also has under consideration a \$12.5 million emergency rate increase that is part of the \$25.9 million rate increase package. Testimony on the proposed emergency increase was presented to the PSC Aug. 2. KU was previously granted a rate increase request on March amounting to \$18 million. The company had requested a \$3 million increase.

KU facing 'financial disaster'?

Don't forget to tell the ASCS
Anne L. Conner, Executive Director, Nicholas County ASCS Office wishes to remind all individuals to report any sale of farm property to the County ASCS Office. This information is needed in order to update farm records and appropriate allotment.
In the case of a property transaction involving burley tobacco quota, the new landowner will not be allowed to market any tobacco until all farm transfer information has been reported to the county office.
All Nicholas County Farmers will receive two post cards the first week in September. On one of the cards producers will be asked to verify information regarding their farm, such as ASCS farm number, farmland acres, cropland acres, address and social security number. The other card asks whether burley tobacco has been grown on the farm, and if DDT, DDE, Dieldrin, or Endrin has been used on the tobacco.
Both of these cards are very important, and must be completed and returned as soon as possible after receipt.
Producers wishing additional information should contact the local ASCS Office.

When you think of pests,

think of me.
I can get the termites out of your house. And the ants, cockroaches, spiders or mice. And keep them out. I can get any pest out of your house (except maybe your in-laws).
I'm Bob Davis, the Carlisle Termite man. Call me collect - LEXINGTON 252-8484.
