Eye Openers

By Dr. Robert F. Pretzsch, Optometrist. SOFT COLOR CONTACTS. Confused about soft color contacts? Don't be. There are three basic types of soft color contacts: The newest color contact lenses can change brown eyes to blue, green, aqua or hazel. The blue - brown-eyed patient can have lenses to change the eyes to hazel. The first color contact lenses made only enhanced the color of the eyes you were born with. They added vibrancy, sparkle or a glow of green or aqua to light-colored eyes. Amber lenses gave brown eyes a shimmer of amber highlights. Lightly tinted contact lenses have been available for some time now. The sole function of this tint is to make it easier for the wearer to find a lost lens, or one that is not centered on the corner of the eye. Soft color contact lenses are optically precise. They correct your vision, are comfortable to wear, and can give you cosmetic excitement to the way you look. Brought to you as a community service by... Dr. Robert F. Pretzsch, Optometrist 21 S. Walnut, Cynthia Hahn Call 234-1424 for Appointment
