**Thank You**  
 We extend our appreciation to all who helped in any way after the wind damage to our store building on July 10.  
 Thanks to the city and county fire departments, ambulance service, police department, city employees, Kentucky Utility employees, Bobby McDonald, A. Payne and co-workers, Red & Vice employees and their families, and everyone else who offered their help.  
 Also, thanks to those who offered space for storage if that need arose. The concern of the entire community was appreciated.

**GENERAL NEWS**

**Conservation Measures**

**WATER CONSERVATION**  
 The measures listed below are suggestions for water waste. They are listed in order of importance, and each measure can save even more appropriate during warm weather conditions.

**INDOOR RESIDENTIAL USE**  
 Conservation for Normal Conditions  
 -Use dishwashers only when they are full. Washing dishes by hand isn't the best way to conserve about 25 gallons.  
 -Adjust water level on clothes washing machines, if possible. Use loads only if not adjustable.  
 -Turn off faucet while brushing teeth. Save about 5 gallons per day.  
 -Reduce water used per flush by installing toilet tank displacement inserts. A plastic jug may be used as an alternative. DO NOT USE RECYCLES—they deteriorate when washed and the resulting grit blocks slugging of the flap valve.  
 -Do not use the toilet as a trash can.  
 -The sink and tub supports avoid wasting water.  
 -Keep a bottle of chilled water in the refrigerator for drinking. The tap for leaks in toilets, which can leak slowly. The following amount can be used as an alternative: Place a drop of food coloring in the toilet tank, but don't flush for 20 minutes. If color appears in the bowl, don't flush.  
 -Flirt and fix leaks in hot and cold water-using appliances. Fixtures can usually be fixed cheaply and quickly by replacing washers.  
 -Avoid plumbing with flow-restricting or other water-saving devices. These are usually an investment and may be inelastic.  
 -Learn to read your water meter so you can judge how much water you use and what difference conservation makes.  
 Conservation for Water Shortage Advisory or Alert  
 -Pre-trial 07/28/88. 9:30 a.m.  
 -This shorter showers and shallower baths. Save about 25 gallons. Reduce the number of toilet flushes per day. Each flush uses about 6 gallons of 8 p.m. have water service interrupted.  
 -Don't use a garbage disposal.  
 -Use non-phosphate detergent and save laundry water for lawns and plants.  
 Conservation for Water Shortage Emergency or Rationing Phase  
 (In addition to measures listed above)  
 -Turn off water while shaving.  
 -Use disposable staining sticks.

**OUTDOOR RESIDENTIAL USE**  
 Conservation for Normal Conditions  
 -Water before 10:00 a.m. Morning is better than evening, when the sun causes evaporation.  
 -Water only when needed. Check the depth of soil dryness by digging with a trowel. While the surface may be dry, adequate moisture may be retained beneath the surface.  
 -Water deeply, slowly and weekly. Most vegetables require moisture to a depth of six to eight inches.  
 -Keep soil loose so water can penetrate easily.  
 -Use mulch around plants and between rows to hold in moisture.  
 -Keep weeds out to reduce competition for water.  
 -Put the water where you want it and avoid evaporation by using well-mulched or shade-covered lawns, not sprinklers.  
 -Trees and shrubs.  
 -Water deeply using a soil-moisture.  
 -Water only when needed. Check the depth of soil dryness by digging with a trowel. While the surface may be dry, adequate moisture may be retained beneath the surface.

**Mulch** to reduce evaporation. A 2" to 3" layer of wood chips, pine needles, grass clippings, or straw keeps the soil cool in summer. Mulch adds food-value interest and reduces weeds, and the few weeds that do grow are easy to spot.  
 -Adjust water-clogging plants in full sun more often than those in shade.  
 -Do not use sprinklers. Apply water directly to head of plants.  
 -Do not fertilize during the summer. Fertilizing increases plant's need for water.  
 -Apply plastic mulch until fall or spring when there is generally less need for water.  
 -Install trickle-dry irrigation systems close to the roots of your plants.  
 -By dripping water slowly, the system doesn't dry water into the air where it can be lost through evaporation. Use and probes for large trees.  
 -Water when it is cloudy at night, or even when a light rain is falling.

**Conservation for Adversity Conditions**  
 (In addition to measures listed above)  
 -Do not allow children to play with hose or sprinklers.  
 -Limit or washing.  
 -Be ready to catch rainfall that occurs. Place containers under downspouts.  
 -Use leftover household water if available.  
 -Consider delaying the mowing or adding of new lawns.  
 -Determine the amount of water being used outdoors by comparing water bills for the summer to winter.  
 -Conservation for Alert Conditions (If outdoor watering is allowed) (In addition to measures listed above)  
 -Vegetable gardens and food trees should be given minimal amounts of water on an individual basis only.  
 -Do not water lawns and tennis plants.  
 -Do not use sprinklers.  
 -Most outdoor watering is prohibited under emergency conditions.

**HOSPITAL AND HEALTH CARE FACILITY USE**  
 -Reduce laundry usage or services by changing bed linen, etc., only when necessary to preserve the health of patients or residents.  
 -Eliminate, postpone, or reduce, as many as appropriate, elective surgical procedures during the period of emergency.

**INDUSTRIAL USE**  
 -Identify and repair all leaky fixtures and water-using equipment. Give special attention to equipment connected directly to water lines, such as
