NOTICE TO PERSONS SERVED BY THE CARLISLE WATER DEPARTMENT PERTAINING TO LEAD IN DRINKING WATER

Read and keep the following information on the potential hazards of lead in drinking water and what can be done to minimize any risk to you. The Carlisle Water Department, in cooperation with the Drinking Water Branch of the Kentucky Division of Water and the U. S. Environmental Protection Agency (EPA) is providing this information, as required by federal law.

Lead can occur at potentially harmful levels in tap water if the plumbing fixtures through which the water travels, including the solders and fluxes used to connect them, contain lead. The EPA has recently mandated that all newly installed plumbing materials be essentially lead-free.

The United States Environmental Protection Agency (EPA) sets drinking water standards and has determined that lead is a health concern at certain levels of exposure. There is currently a standard of 0.050 parts per million (ppm). Based on new health information, EPA is likely to lower this standard significantly.

Part of the purpose of this notice is to inform you of the potential adverse health effects of lead. This is being done even though your water may not be in violation of the current standard.

EPA and others are concerned about lead in drinking water. Too much lead in the human body can cause serious damage to the brain, kidneys, nervous system, and red blood cells. The greatest risk, even with short-term exposure, is to young children and pregnant women.

Lead levels in your drinking water are likely to be highest:

- if your home or water system had lead pipes, or
- if your home has copper pipes with lead solder, and
- if the home is less than five years old, or
- if you have soft or acidic water, or
- if water sits in the pipes for several hours."

To find out which type of plumbing you have, look at it and perform the following simple tests:

Lead pipe is most often found in very old homes and buildings. Lead pipe is gray, relatively soft, and can be easily scratched to shine with a screwdriver, coin, or key. Some iron pipe may look like lead pipe; however, iron pipe is very hard and usually black.

Copper pipe usually has a characteristic copper color. Until very recently, most copper pipe was installed using lead-based solder. Lead solder is also gray, soft, and can be scratched shiny. Copper pipe that has been soldered with lead usually contributes less lead to the minerals from the water. After being installed about five years, lead solder usually contributes very small amounts of lead to the water.

Iron, steel, and "plastic" pipe have not been associated with any health effects from lead since they contain very small amounts of lead or none, and are assembled without lead solder.

You can reduce the possibility of consuming water with high lead concentrations by following these simple precautions:

If the water has not been used for several hours, flush the cold water pipes before using the water for human consumption. Turn on the faucet and let the water run until the water temperature cools and gets no cooler. If there has been no recent major water use, flushing the pipes may take several minutes.

- Use only cold water for drinking, cooking, or preparing baby formula.

- If new plumbing is installed or repairs are made, insist that lead-free materials be used.

- Lead pipes and service connections can be replaced.

The only way to be sure of the amount of lead in your water is to have the water tested by a state certified laboratory. Contact Carlisle Water Department or the Drinking Water Branch of the Kentucky Division of Water for information about testing.

Testing for lead in water may be especially important to apartment dwellers because flushing the water line may not be effective in high-rise buildings that have lead -soldered central piping.

The Carlisle Water Department produces non-corrosive water that is less likely to dissolve lead from plumbing.

The test results of water samples collected March 7, 1988, from the Carlisle Water Department distribution system indicate a lead concentration average of 0.001 parts per million.

The Carlisle Water Department produces and distributes water that is within the established maximum contaminant level for lead.

The Carlisle Water Department does not have lead service lines and only very low lead-containing materials are present in our distribution system.

The Carlisle Water Department will be making a complete inspection in locating lead-containing materials in our distribution system.

If you have questions concerning this notice or would like more information concerning lead in drinking water, please contact Thomas H. Vice at (606) 289-5300 or the Drinking Water Branch of the Kentucky Division of Water at (502) 564-3410.

A copy of this notice has been forwarded to the Drinking Water Branch of the Kentucky Division of Water.

SCHOOL

GATE students take Louisville trip

Phyllis Guthrie

By Heather Mathes
Of The Carlisle Mercury Staff

A group of students at Nicholas County Elementary School had a chance to experience and explore their imagination and the creativity of others through a new method of drama using a classic play.

15 Sixth through eighth grade students in the Gifted and Talented Education (GATE) Department at NCES traveled to Louisville for the "Imagination Celebration" sponsored by the Kentucky Center for the Arts in collaboration with The Kentucky Department for Education.

The celebration is an annual event which, according to Phyllis Guthrie, GATE Teacher and sponser, is different each year it is performed.

This year the group viewed Macbeth and then participated in an imaginarium workshop in which the people who produced the production got the students involved as they took some of the parts.

"We had taken parts of Macbeth in class in order for the kids to be exposed to the plot, and when they saw took part in the play they really knew what was going on and that made me proud," said Guthrie.

The group also used their imagination to great lengths while taking parts.

According to Susanne Cox, GATE student, Macduff's part was replaced with an Oliver North charactar, possesing his qualities, as were MacBeth replaced with George Bush, Ross with Fawn Hall and Malcolm (the king's son) replaced with Ronal Reagan Jr.

The group also visited the "Cultural Kaleidoscope" held at the Louisville Science and History Museum.

The students in grades one through five also took a field trip to study more of what they had been exposed to in class.

"We took them to the Cincinnati Natural History Museum for the planetary program on 'dynamation.'

"These were dinosaurs that had been animated because we had been studying about dinosaurs, the time they spent on earth and why they became extinct and of course making dinosaur models," Guthrie said.

One student, Hannah Hunt, added, "Their tails moved, they opened their big jaws and they were bigger than this room."

The GATE program has also had good news for the next school year.

Guthrie said, "We did receive a grant to continue funding for the next year, and although we did not meet our goal of minimum foundation classification, (which the special education classes are under) we are hopeful of meeting that goal in the special session being held this summer."

She concluded, "We are the only state in the union that offers gifted education and I hope we can continue to offer this to our children because the need is there."

NCES awards announced

By Heather Mathes
Of The Carlisle Mercury Staff

The Nicholas County Elementary School Awards program in the last week of school involved fifth through the eighth grades and honored those students exhibiting academic excellence.

The most prized award, one honoring citizenship, was awarded to Janella Sibert and Brian Cannupp.

Principal at NCES, Gerald Hammons said, "The Citizenship Award goes to those that exemplify cooperation, honor rules and regulations and are can always be counted on as dependable."

He added, "The seventh and eighth grades hold an important position as the lower grades look up to them and try to emulate and copy their actions.

"Janella and Brian have proven to be extremely im-
