Births

BOWLES
Mr. and Mrs. Roger Keith Bowles announce the birth of a daughter, Sara Lynn, May 1, 1988, at the Central Baptist Church, Lexington, May 1. She weighed seven-pounds and five ounces and was welcomed home by her brothers, Daniel.

Hospital Report

Admissions & Discharges April 22-April 28, 1988
Admissions: Carlisle, Gladys Gans, Curtis Harris, Bruce King, Robert Thompson, Ruth Wilson, Charles Myers, Avey Parry, Jimmy Smoot, Edith Dayton, Gladys Gifford, Angela Jolly, Cassandra Gilvin, Tommie Davies, Joyce Zornes, Pauline Cartmill, Melissa Pope, Jesse Ishmael, Charlotte Warner, Millersburg, Stephanie Myers, Helen James, Mt. Olivet, William Moore, Sharpburg, Jeff Martin, Moorefield, Ida Shields.
Discharges: Carlisle, Emma Fryman, Nancy Jones, Clara Griffith, Lucy Fryman, Glada Sams, Everett Green, Bruce King, Ruth Wilson, Christopher Myers, Edith Dayton, Angela Jolly.

East Union Homemakers
The East Union Homemakers met Friday night at the home of Anita Dampier. A quilt gave the devotional and led in prayer. Eight people were present and answered the roll call by naming their favorite spring flower. Monthly reports were taken and announcements were made.

SUPERVISOR
Share, ambitious person to supervise, hire and train demonstrators, quality decoration and gift line. Work from your home. Weekly pay. No investment. Free training and samples. Business, teaching or party plan helpful. Must be 21. Call collect or direct 602-823-0000 or 602-744-0014 or 602-873-8000.

Preserve your love for Mom.
Send the FTY® Preserve Jar Baskets. Mother's Week begins May 2. Just call or visit us today.

602 Main Street
P.O. Box 947809
Open This Sunday 10-4
Open Friday & Saturday 9-4

Maternal grandparents are Mr. and Mrs. Roger L. Bowles.
Maternal great-grandparents are Mr. and Mrs. Con- way Tedder.
Stewart
Mr. and Mrs. Steven Neal Stewart of Knoxville, TN, announce the birth of their third child and second son, Steven Neal, II, April 21, 1988. He weighed 10 pounds, 6 ounces.

Paternal grandparents are Mr. and Mrs. William Tedder and Mr. and Mrs. Thomas Tedder.

Maternal grandparents are Mr. and Mrs. Maxwell E. Burden of Arthur Road, Carlisle.
Paternal grandparents are Mrs. Jean Stewart of Louisville and the late Arthur D. Stewart.

Paternal grandparents are Mr. and Mrs. Calvin Willis Hopkins.
Paternal great-grandmother is Mrs. Eva Willis.

T & K - YOUR Friends in Fashion
Open Mon. - Sat. 10 a.m. - 6 p.m. Open to every Friday

NOTICE TO PERSONS SERVED BY THE CARLISLE WATER DEPARTMENT PERTAINING TO LEAD IN DRINKING WATER
Lead and keep the following information on the potential hazards of lead in drinking water and what you can do to minimize any risk to you. The Carlisle Water Department, in cooperation with the Drinking Water Branch of the Kentucky Division of Water and the U. S. Environmental Protection Agency (EPA) is providing this information, as required by federal law.
Lead can occur at potentially harmful levels in tap water if the plumbing fixtures through which the water travels, including the solder and fluxes used to connect them, contain lead. The EPA has recently mandated that all newly installed plumbing materials be essentially lead-free.
The United States Environmental Protection Agency (EPA) sets drinking water standards and has determined that lead is a health concern at certain levels of exposure. There is currently a standard of 0.050 parts per million (ppm). Based on new health information, EPA is likely to lower this standard significantly.
Part of the purpose of this notice is to inform you of the potential adverse health effects of lead. This is being done even though your water may not be in violation of the current standard.
EPA and others are concerned about lead in drinking water. Too much lead in the human body can cause serious damage to the brain, kidneys, nervous system, and red blood cells. The greatest risk, even with short-term exposure, is to young children and pregnant women.
Lead levels in your drinking water are likely to be highest:
- if your home or water system has lead pipes, or
- if your home has copper pipes with lead solder, and
- if the home is less than five years old, or
- if you have soft or acidic water, or
- if water sits in the pipes for several hours.

To find out which type of plumbing you have, look at it and perform the following simple tests:
- Lead pipe is most often found in very old homes and buildings. Lead pipe is gray, relatively soft, and can be easily scratched to shine with a screwdriver, coin, or key. Some iron pipes may look like lead pipe; however, iron pipe is very hard and usually black.
- Copper pipe usually has a characteristic copper color. Until very recently, most copper pipe was installed using lead-based solder. Lead solder is also gray, soft, and can be scratched shiny. Copper pipe that has been soldered with lead usually contributes less lead to the minerals from the water. After being installed about five years, lead solder usually contributes very small amounts of lead to the water.
- Iron, steel, and "plastic" pipe have not been associated with any health effects from lead since they contain very small amounts of lead or none, and are assembled without lead solder.

You can reduce the possibility of consuming water with high lead concentrations by following these simple precautions:
- Use only cold water for drinking, cooking, or preparing baby formula.
- If new plumbing is installed or repairs are made, insist that lead-free materials be used.
- Lead pipes and service connections can be replaced.
- The only way to be sure of the amount of lead in your water is to have the water tested by a state certified laboratory. Contact Carlisle Water Department or the Drinking Water Branch of the Kentucky Division of Water for information about testing.
- Testing for lead in water may be especially important to apartment-dwellers because flushing the water line may not be effective in high-rise buildings that have lead-soldered central piping.
- The Carlisle Water Department produces non-corrosive water that is less likely to dissolve lead from plumbing.
- The test results of water samples collected March 7, 1988, from the Carlisle Water Department distribution system indicate a lead concentration average of 0.001 parts per million.

The Carlisle Water Department produces and distributes water that is within the established maximum contaminant level for lead.
The Carlisle Water Department does not have lead service lines and only very low lead-containing materials are present in our distribution system.
The Carlisle Water Department will be making a complete inspection in locating lead-containing materials in our distribution system.
If you have questions concerning this notice or would like more information concerning lead in drinking water, please contact Thomas H. Vise at (606) 989-8500 or the Drinking Water Branch of the Kentucky Division of Water at (602) 564-3410.
A copy of this notice has been forwarded to the Drinking Water Branch of the Kentucky Division of Water.

CARLISLE PIC-PAC SUPERMARKETS

WATCH FOR OUR PRODUCE SALE!

TRUCK LOAD SALE!

IN THE PARKING LOT . . . FRIDAY AND SATURDAY May 6th & 7th

Fresh Fruits
• Apples • Oranges
• Bananas • Pears
• Grapefruit • Pineapples
• Grapes • Strawberries
• Lemons • Watermelon
• Limes • And More!

Fresh Vegetables
• Broccoli • Green Beans
• Cabbage • Lettuce
• Carrots • Onions
