

Back to school in Nicholas County - at least for a day!

School was "back to normal" Tuesday, although several children were absent due to the flu, but many said they liked being with friends again after the holidays. School was closed the very next day due to snow.

"Take a picture of me! Take a picture of me!" this student shouted before going home Tuesday.

Manish Harris of Locust Street was met at the school bus by her grandfather, Bill Mathes, as Head Start let out Tuesday afternoon.

Chris Kelley, far left, and his friends at Nicholas County High School enjoyed seeing each other again after the "long" holiday vacation. School was called off in Nicholas County and the surrounding area Wednesday, Jan. 3, due to inclement weather.

Dental Breakthroughs And You

Jewell R. Meade, D.M.D.

There is a new dental instrument called the KCP. It is really a painless replacement for the drill! The term "painless" is probably an overstatement. However, the KCP Kinetic Cavity Preparation system can often be used without anesthesia. And though it doesn't replace the drill completely, it does provide an alternative way to prepare many teeth for fillings. It is especially beneficial in the treatment of children and in the care of patients whose medical conditions restrict the use of anesthesia.

How does it work?
 Minute particles, almost too small to be seen with the naked eye, are carried to the tooth by a stream of air, gently and precisely spraying away decay. Think of it as a microscopically precise miniature sandblaster. There is little or no vibration and no whining sound. Is it safe?

Absolutely. The particles used are alpha alumina, a pure, biocompatible food grade substance long used in medicine and food. Only a tiny amount is actually used in each procedure and most of it is immediately removed by an evacuation system. Laboratory tests show that patients would have to undergo about 20 typical 20-30 second KCP procedures in order to inhale enough alpha alumina to equal the weight of one grain of table salt.

No. The drill is still needed to prepare the teeth for crowns, remove silver-colored fillings and perform a number of other important procedures. And the KCP system is not used to treat soft tissue such as the gums. When the procedure does call for the KCP, it may be used in combination with other instruments such as the drill or the dental laser.

How can I learn more about the KCP?
 If you call our office at 606-987-3290 we'll be happy to answer your questions.

COME CELEBRATE WITH US!

OPEN HOUSE
 SAT., JAN. 6TH
 FROM 1-5 PM

You are invited to tour our new facility and celebrate with us at our 1996 New Year's party Saturday, January 6th, from 1-5 pm at our dental office in the Wal-Mart Shopping Center in Paris.

**DON'T MISS THE FUN AT
 WE HAVE CLEANED IT UP!
 WE HAVE REMODELED IT!
 WE HAVE UPGRADED IT!**
 AND, our office is set to offer you the best of dental care with an advanced trained staff and the latest in hi-tech equipment!

**DENTAL HEALTH ASSOCIATES!
 •REFRESHMENTS •DOOR PRIZES
 •DRAWINGS FOR FREE DENTAL WORK AND MUCH MUCH MORE**
DENTAL HEALTH ASSOCIATES
 2228 PARIS BYPASS RD., PARIS, KY 40361
