

Attention Anglers... Discard used fishing line properly

The problem of anglers discarding their used fishing line improperly is on the rise in Kentucky waters.

"Discarded fishing line on the ground or in the water can be lethal to waterfowl, shore birds, and aquatic life and still will be there when the litterbug's grandchildren are adults."

"Wildlife can become entangled in fishing line causing death or affecting appendages," said Jim Axon, assistant director of fisheries for the KDFWR.

"Fishing line is an almost invisible threat. It's more of a threat than more visible waste."

"Discarded fishing line is common around any popular fishing spot," McChesney said. "Any bird can be affected and I've also seen turtles entangled in discarded fishing line."

Anglers should dispose of fishing line properly. If one is far away from a trash receptacle, line can be wound into a tight ball and stored in a bucket until it can be disposed of properly.

Some fishing line companies offer recycling programs for spent fishing line.

It's part of a larger problem that we have in heavily fished areas," Axon said.

Anglers should be environmentally conscious and to go about daily activities like feeding. Entanglements generally have a tourniquet effect and restrict or cut off blood flow.

They also create an environment for severe infections that can ultimately lead to death."

Fishing line not only can kill wildlife, but also harms an area's aesthetic beauty and casts a foul light on anglers.

"It's not only an eyesore, but it's a bad reflection on anglers and on the sport of fishing."

NICHOLAS COUNTY WATER DISTRICT 2000 QUALITY WATER REPORT

We are very pleased to provide you the Annual Quality Water Report. We currently are working to keep you informed about the quality of our water and services we have delivered to you over the past year. Our goal is and always has been, to provide to you a safe and dependable supply of drinking water. We want you to understand the efforts we make continually to improve the water treatment process and protect our water resources.

Water systems in Kentucky are required to test for the following contaminants. Only those contaminants that were detected are included in the test results table below. All of the analysis results are on file with the water system and are available for review.

Table with 4 columns: Contaminant, Maximum Contaminant Level (MCL), Unit, and Frequency. Lists various contaminants like Microbiological, Inorganic, and Organic substances.

PARTICULATE TEST RESULTS

Table with 6 columns: Contaminant, MCL, MCLG, Highest Detected, Range, and Violation. Shows results for Total Suspended Solids and Total Suspended Solids (filtered).

REGULATED CONTAMINANT TEST RESULTS

Table with 7 columns: Contaminant, MCL, MCLG, Highest Detected, Range, Date of Sample, and Violation. Lists regulated contaminants like Microbiological, Inorganic, and Organic substances.

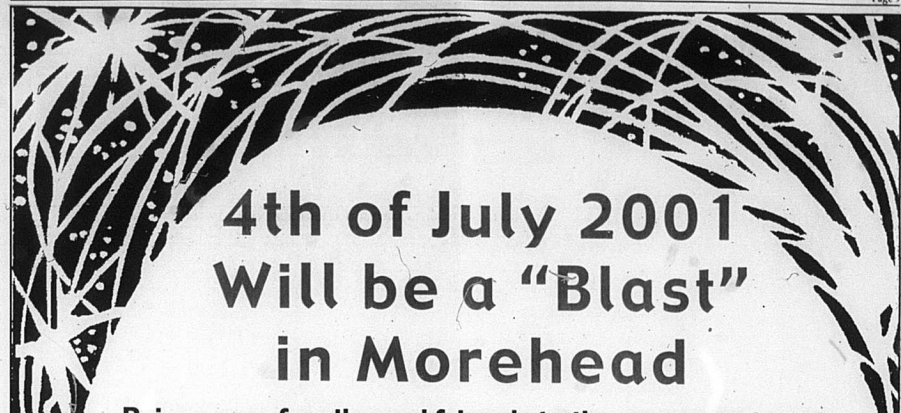

UNREGULATED CONTAMINANTS TEST RESULTS

Table with 4 columns: Contaminant, Unit, Average, and Range. Lists unregulated contaminants like Bromodichloromethane and Chloroform.

NO BUREAU OF HEALTH COMPLAINTS... *The MCL for TTHM will change to 80 on the year 2002. Unregulated contaminants are those for which EPA has not established drinking water standards. Their purpose of unregulated contaminant monitoring is to assist EPA in determining the occurrence of unregulated contaminants in drinking water and whether future regulation is warranted.
