or a primary contributor to air and water pollution, soil erosion, rainforest destruction, land contamination, and the extinction of many species of animals.

So if you'd like to lessen your footprint, the single most helpful step you can take is to eliminate animal products from your diet.

Vegetarians are about forty percent less likely to develop cancer than meat eaters, and about 90 percent less likely to have a heart attack.

Strokes, many degenerative diseases, and diabetes are all markedly lower in vegetarians than in meat eaters.

and jilly sandwich every day? This stuff happens all the time, and it begs the question: If this is who they are, do I really want to eat them?

It feels good to align your eating habits with your values. In The Way We Eat, Why Our Food Choices Matter, Jim Mason and Peter Singer argue that "good people" make "bad food choices" because they lack access to information that would encourage them to choose differently.

A quick web search will yield volumes of information to help you grasp that indeed, we are destroying the planet by raising 65 billion animals worldwide each year for people to consume.
