girl talk early breast cancer screening

Mammograms are important and recommended yearly for all women over 40. But did you know that by the time a "lump" appears on a mammogram or is able to be felt by you or your physician, it has probably been present for over 7 years?!

The "cutting edge" cytology HALO® (PAP) testing for cancerous or precancerous cells, obtained via a simple in-office procedure (no needles), can detect over 90% of these abnormalities as many as eight years before a mammogram.

GERALD HARPEL, M.D.
F.A.C.O.G., F.A.C.S.

Dr. Gerald Harpel of Just for Women OB/GYN is one of only two physicians in Kentucky to have this technology available. It is recommended primarily for women between 25 and 55 years old, but is not meant to take the place of mammograms. Remember, over 80% of breast cancer patients have no family history of the disease!

For more information or to schedule a HALO®, please contact Just for Women, OB/GYN today at 859-234-5555. It is not necessary to be an established patient of Just for Women to avail yourself of this opportunity.
